*The law faculty.*—This consists of 14 principal departments, under 12 professors, beside the 2 departments of legal medicine and psychiatry. The students of law are obliged, for their general education, to attend during their first year the lectures in the historico-philological faculty on the Russian language, ancient Russian history, history of ancient philosophy and logic, history of the Middle Ages; during their second course, the lectures on modern Russian history, the history of modern philosophy and psychology, as well as the French or German language. This rule is exceedingly beneficial for the elevation of the juridic faculty and worthy of imitation with us, especially as no finished college education is required for entrance to most of our American law schools, as is required for entrance to the Russian juridical schools.

The principal departments in the Warsaw law faculty are the following: Encyclopædia of law and the history of Slavonic legislation, legal and political sciences; history of Russian law; Roman law and Byzantine law; political law, civil law, civil procedure, penal law, criminal procedure, police law, law on economics and finances, international law, statistics, commercial law.

archives, although treasures are yearly dug out and published by the Polish and Russian historians in Warsaw, Cracow, and Lemberg. The archives contain, furthermore, among other treasures, the documents of the last Polish king and of Kosciuszko, the diplomatic archives of the Polish crown and Lithuania (1579-1759), political documents from the time of the partitions; also documents from the Russian time (1826-1831). The archives are, according to their importance, excellently administered by the Polish professor of the university, Adolf Pawiński, well arranged and catalogued. They are under the control of the central government of the Tsarstvo of Poland and have about 80,000 volumes in folio.<sup>1</sup>

*Archives of old records of the kingdom of Poland.*—There are still other important archives in Warsaw (Archiv starych diel), which contain the remnant of the records, decrees, accounts, documents, contracts of the dissolved state council of the Polish king, the various commissions of the Polish government and other central magistrates. These archives form a part of the present chancellery of the Russian central government of the Polish Tsarstwo. By far the greater part of these old records had been destroyed or were sold at auction as waste paper after the last partition of the country; another part had been distributed among the various state ministries, provincial governments, and local magistracies.

*Secondary education in Warsaw.*—Of secondary schools Warsaw possesses 6 gymnasia, 1 real-gymnasium, 2 progymnasia (i. e., incomplete, the upper classes wanting), 1 (male) teachers' seminary, besides 4 (female) gymnasia, progymnasium, 1 school of drawing, 1 institute for the deaf and dumb and 1 for the blind, 1 Sunday business school for merchant clerks, 1 Sunday business school for tradesmen and mechanics. These are all Government schools. Outside of them there are, however, a large number of private schools of a higher order, which are all licensed and provided with teachers who have all finished their professional education and are provided with the respective diplomas.

*Musical education in Warsaw.*—A special feature of higher education are the musical institutes of Warsaw. In 1805 the Musical Society was organized. Its directors were Fr. Lessel and Count Fr. Krasicki. In 1812 it was changed to a "Musical Conservatory," under the directorship of Elsner. In 1823 the conservatory had already 164 pupils, among them Chopin and Dobrzynski, both pupils of Elsner. In 1858 Moniuszko was director of the conservatory and the leading spirit in Polish music. In 1861 Apolinary Kontski reorganized the conservatory, but the insurrection of 1863 greatly impaired the progress of that school, as well as of all the other institutions; yet the art of music developed to a high degree among the Poles, especially at the capital.

---

<sup>1</sup>There is an excellent description of this famous library by Bandtke and Herbart (lithogr.), 1840.

All these facilities for schools, from the lowest to the highest order, passing over the whole range of human knowledge—its unique libraries, its stupendous historical monuments, with their glorious reminiscences—make Warsaw the center of the intellectual life of the Polish people. Churches and cathedrals help to attain the highest standard of culture possible in a modern large city. Famous among them are the Catholic Cathedral of St. John, founded in 1360, connected with the old royal palace by corridors, containing the famous pictures and tombs of ancient celebrated Poles; the magnificent Greek Cathedral, finished in 1842; the Church of the Holy Cross, finished in 1695, with a splendid frontage and valuable images. The Capucin Church, built in 1681, contains the admirable marble statue of Jan III. (For a general description of the city, see the author's article "Warsaw," in Johnson's Universal Cyclopædia.)

*Secondary education in the country at large.*—As stated before, education has also been entirely reorganized since 1863 over the entire Polish country outside of Warsaw, and is steadily progressing, owing to the efforts of the Government to Russianize the nation by a thorough and extensive Russian education, and still more from the conviction of the Polish people that education alone can secure a high estimation and prestige of their nationality in the vast empire of which they are an integral part. In every Government town there is a gymnasium; the former district schools are rapidly changed into progymnasia. Although the official language in all the schools is Russian, as well as in the courts and all official affairs, yet the Polish language is generally known and used and even enriched and polished by the extensive printing of Polish books of all grades, while the pulpit is filled almost invariably by Polish priests for the Polish population, which is mostly Catholic. Especially difficult, if not impossible, is it to extirpate the Polish language in the primary schools which are being founded in almost all the villages that have an almost exclusive Polish population, unless it be mixed with numerous Jews and Germans. These schools, under the special supervision of Russian school inspectors, succeed, of course, in teaching the Russian language, but the latter is seldom used by the children at home and after the obligatory years of schooling are over.

The following secondary schools in the congressional Kingdom have certainly not yet lost their Polish character:

The city of Płock has 3 gymnasia, 1 teachers' seminary, 1 theological seminary.

The city of Połock (in White Russia) had a Jesuit academy up to 1829; from that time a high school, conducted by the order of "patres pii" (patres scholarum piarum). Połock has now only a county gymnasium. The cadet school was abolished in 1863.

The city of Sandomierz has a theological seminary and a gymnasium.

The city of Wloclawek has a theological seminary.

The city of Kielce has 1 theological and 1 teacher's seminary.

The city of Lublin has a theological seminary and a gymnasium.

The city of Lipno has a gymnasium.

Teachers' seminaries are also at Wymyslin, Tuchola, Leczyca, Biata, Siedlce, Wajwery, an agricultural and forestry academy at Puławy, a business college at Lodz.

Outside of these there are about 50 public and private high schools in the congressional Kingdom.

*Wilno.*—We have briefly mentioned the history of the old and famous University of Wilno, the ancient capital of Lithuania, its foundation by Stephen Batory in 1570, its character as a Jesuit institute, its tendencies for good and for evil, its renewal by Alexander I in 1803, its prestige at that time, its suppression in 1833, and the removal of its library to St. Petersburg. A medico-surgical academy replaced it, but this was suppressed in 1842, and thus every trace of the university was blotted out.

But, although the University of Wilno is no longer in existence, yet the excellent libraries and archives of the renowned old capital of Lithuania make it still a unique center of learning, especially in Polono-Lithuanian history and diplomatics. Most valuable is the public library and museum (*Publičnaja biblioteka i sostojaščij pri nej muzej*). In 1856 Count Tyszkiewicz founded an antiquarian museum and an archaeological commission with it. When the old museum was closed in 1865 the valuable manuscripts of the museum (538 manuscripts and 2,000 documents) were transferred to the newly established public library of Wilno. In connection with the scholarly expeditions and researches of the years 1860-1880, which dug up rich treasures of the literary past, a considerable collection of church-Slavonic manuscripts was accumulated. The rich archives of Prince Sapieha, of the court of lords at Grodno, containing Russian manuscripts of the sixteenth century and extensive correspondence of Polish magnates in Government service, were also transferred to this library. It contains, besides, some of the most important old Russian manuscripts (for instance, the Turov Evangelium of the eleventh century) and numerous literary productions from western Russia, partly in the western Russian dialects. For the older history of the country there is nowhere more documentary material than here. Russian and Polish documents of all descriptions abound.

The department of printed books has been enriched by the collections of the ancient Roman Catholic cloisters, by confiscations of the rich libraries of political criminals, mostly anti-Russian magnates, and from various donations and exchanges, mostly of Latin and Polish and theological books.

The antiquarian museum contains the rich collections of its founder, Count Tyszkiewicz. Enriched by further donations, it contained in

1858, among others, 2,900 historic objects and 3,200 coins. Some of these valuable objects were later on transferred to the Russian museum in Moscow. At present the Wilno museum contains prehistoric, ethnographical, and mythological objects, old weapons, Christian, old Greek, and Roman antiquities, medals and coins, seals, portraits, and works of sculpture; all the objects together numbered 11,700 in 1885.<sup>1</sup>

Wilno still possesses very numerous schools of a higher order—1 Roman Catholic theological seminary, 1 Greek Catholic seminary, 1 Christian and 1 Jewish teachers' seminary, 2 classical gymnasia, 1 progymnasium, 1 real school, 1 tradesmen's school, 2 girls' gymnasia, over 20 public and city schools.

The ruins of the old and historic castle of the Jagiellos still exist as a monument of Wilno's great past, when it was the capital of the Lithuanian princes from 1323 on. Among the 18 Roman and 12 Greek Catholic churches, the cathedral of St. Stanislaus especially excels with its magnificent marble chapel containing the silver coffin, weighing 3,000 pounds, with the remains of St. Casimir (died 1480), a place of pilgrimage for the Polish-Lithuanian people.<sup>2</sup>

Wilno has also the central archives of the ancient documents of the governments of Wilno, Grodno, Mińsk, Ljublin, and Kowno (Centralnyj archiv drevnich aktovykh knig).

As early as the fifteenth century provision had been made in the Lithuanian statute, and elsewhere, for the preservation of manuscript documents of the grand principality of Lithuania "in the stone houses and solid chests." Thus the materials of the Lithuanian supreme court of Wilno, as well as of other courts, various commissions, etc., i. e., state documents of the Lithuanian dukes, judiciary charters, local records, etc., were gradually collected so completely as to cover local history year for year. But the continuous wars and conflagrations proved very destructive to the archives, many things were purposely destroyed, many documents almost professionally falsified, so that great critical tests are necessary for the appreciation of these collections.

In 1852 the buildings of the suppressed University of Wilno (like those of Kief and Witebsk) were turned over to the storing of the central archives, and all the above-named documentary treasures, mostly Latin and White Russian and Polish, were deposited in that building and finally catalogued in 1863.

The oldest registers of these archives are the documents of the city council of Wilno from 1492 on. Among the most important documents, historically, are the letters and privileges of Jagiello [the bestowing of Magdeburg law (*jus Magdeburgicum*) upon the capital in 1387], of Sigismund Keistutowizs, Casimir, etc. The most recent additions are the

<sup>1</sup> Vide *Systematischer Katalog der russ. Bücher*, 2 Bände (mit Zusätzen), 1879-1888; and *Katalog predmetov Muzeja* (Catalogue of the objects of the museum), II. ed., 1885.

<sup>2</sup> See article Wilno, Johnson's *Universal Cyclopedia*.

archives of the Wilno Chapter, the archives of Ljublin, the archives of the Wilno Carmelites. In 1870 the Wilno archives numbered about 18,000 volumes and 1,700,000 documents.<sup>1</sup>

The searching, investigating, registering, and cataloguing of these documentary treasures, extending at present to 12 volumes of "Akty" with many single works, is being performed by the archæographic commission (Vilenskaja kommissija dla razbora i izdanija drevnych aktov), founded in 1864. In 1842, by the instrumentality and at the expense of Governor A. Semenov at Wilno, a temporary commission appointed for the investigation of the documents and their transfer to the archæographic commission at St. Petersburg was decreed.

*Witebsk.*—The central archives of Witebsk, situated in the ancient cloister of the Dominican monks and coming under the supervision of the ministry of the interior, was established in 1863 to store the judiciary and forensic documents of the old Polish governments of Witebsk and Mohylów (Mogilew) from the sixteenth century to 1800.

But, as in the Polish state the courts had administrative functions also, there are other valuable materials relating to the economic and political conditions, church history, and ethnography of those districts of the old Kingdom, amounting to 1,823 volumes.

Nevertheless, while there exists all the elements for the highest culture and education in this vast country, known for many centuries by the historical name of Lithuania, and called in the official Russian language the Country of the Northwest, it is at present perhaps the most inanimate country in Europe. According to Russian administrative division, Lithuania consists of the governments of Wilno, Grodno, Kowno, Mińsk, Mohylów, and Witebsk. It occupies a territory larger than the Kingdom of Italy, and has almost 9,000,000 inhabitants (that is about 40 per cent of the population of the Kingdom of Poland proper). The proportion of industrial wealth per inhabitant is 4 rubles annually against 23 rubles in Poland. Commerce is reduced to a minimum, and is mostly in the hands of Jews, who are more numerous in Lithuania than anywhere else in Poland.

Regarding public instruction, Lithuania occupies almost the lowest place among all the provinces of European Russia, only the district of Orenburg, with its Bashkir and Tartar population, ranks lower in this respect. There are but 20 secondary schools with 5,800 pupils (that is 40 per cent of what there were thirty years ago). Primary instruction is even more neglected. The most civilized province of the country, the government of Kowno, with 1,600,000 inhabitants, has but 12,500 children in the public schools.

Newspapers are almost entirely wanting. Beside the official Russian Wilenski Wiestnik (Messenger of Wilno) there is no journal in the

<sup>1</sup> Vide: Katalog drevnim aktovym knigam gub. Wilen, Grodn., Ljubl., Kovenskoj, 1872.

country, Polish publications being prohibited as well as the Polish language, since this country, though it was united with Poland for many centuries, is not considered as Polish territory.

#### HIGHER EDUCATION IN AUSTRIAN POLAND.

In Galicia (Polish Halicz), the Polish crown land of Austria, which comprises the old kingdoms of Galicia and Lodomeria, the duchies of Oswięcim (Auschwitz) and Zator, and the grand duchy of Cracow, the entire school system, with the exception of the universities and schools of technology and arts with university rank, is governed by the supreme council of schools at Lemberg. This supreme council of schools and the rectors of the universities of Cracow and Lemberg, who are also ex-officio members of the Galician Diet (Landtag), and the rector of the school of technology at Lemberg are directly responsible and subject to the minister of public worship and instruction in Vienna (Hungary has had her own minister of public instruction since 1867).

The primary schools in Galicia are steadily improving, but although the law enforces compulsory attendance at the national schools for children between 6 and 12 years, and although parents are subject to fines for neglecting to send them, the percentage of those children, who ought to attend the common schools is still very low.

The secondary schools are the gymnasia, real gymnasia, and real schools. A complete gymnasium provides for a course of eight years' study, divided into two parts of four years each. The lower course not only prepares for the higher, but is also complete in itself for those who are unable or unwilling to proceed further. In passing from one class to another the scholars undergo a very searching examination. The curriculum of an Austrian gymnasium does not differ greatly from that of the German gymnasia; only all the courses are conducted in Galician gymnasia and other secondary schools in the national language of the people, i. e., Polish and Ruthenian, the former being in the majority and greatly predominating in the west, the latter in the east.

Of the 11 universities of the Austro-Hungarian monarchy, Galicia alone has 2—Cracow and Lemberg. Of the 8 schools of technology, Galicia has 1 at Lemberg, admission to which generally is conditioned by a successful graduation from an upper real school, a gymnasium or a real gymnasium, which insures the possibility of imparting a high scientific education. The complete technical course extends over five years.

The standard of these institutions will be described somewhat in detail in the following pages.

*The New University of Cracow.*—The famous old Jagiellon University of Cracow (Uniwersytet Jagielloński w Krakowie) has been illustrated in its most general characteristics in the foregoing pages of this study. We have noticed its respectable age, the papal bull of May 12, 1364, which permitted King Casimir the Great to establish a "studium

generale in qualibet licita facultate," the many vicissitudes of its existence, its universal reputation and foremost rank at the end of the fifteenth century owing to the noble humanistic and astronomical studies at that stronghold of highest learning. For centuries the Uniwersytet Jagielloński formed the center of scientific life in Poland, was a strong advocate of religious toleration and of that noblest flower of the highest learning, freedom of thought and conscience. Roman Catholic, as the university always was, it sustained a long, protracted struggle with the Jesuit order, whose spirit it deemed harmful to the freedom of the Polish nation. But with the degeneration of the latter in its constant wars with Russia, the Cossacks, the Turks, the Swedes, the Brandenburgers, the Prussians, and in the eternal feuds among the magnates themselves, the university, too, degenerated and finally vanished entirely.

The university, completely reorganized, was reopened on October 18, 1817, and on October 5, 1826, was solemnly confirmed by the three protecting powers of the Republic of Cracow: Austria, Russia, and Prussia. In 1846 the Republic, and with it the university of the capital, became Austrian again, to increase the wealth of ten universities by a new brilliant star. But the attempt to introduce German as the official language into the philosophical, medical, and law faculties (the theological faculty being Catholic and Polish throughout could, of course, not be changed) by ministerial decree of October 29, 1853, failed. Between February 4, 1861, and April 30, 1870, the Polish language was gradually and completely restored to cultivate and to treasure up the valuable civilization of the first western Slavonic nation, a great and noble task which is being fulfilled with a peaceable and affectionate devotion.

The administration of the university in 1892 was conducted at an expense of about 339,550 florins, which included the establishment of the second course of the agricultural department in the philosophical faculty. The expenses of the fiscal year 1893 amounted to 393,794 florins, including 30,000 florins for the establishment of the third course of the agricultural department. The governmental contribution for covering the expenses was 379,151 florins. The budget of expenses for 1895 was 531,296 florins, of which 485,060 were paid by the Government.

*The Imperial Academy of Sciences.*—Closely connected with the university, if not actually a part of it, is the Imperial Academy of Sciences at Cracow which is composed of a body of the most eminent men in the mental and natural sciences. With the exception of the Academy of Sciences in Vienna, which had been proposed by Leibnitz, but was founded on May 30, 1846, and which publishes the great scholarly records of its sessions, the "*Fontes rerum Austriacarum*," the "*Scriptores ecclesiastici latini*," etc.; the former is the most important academy of sciences in the Austrian Monarchy. As for scholarship and brilliancy in Slavonic researches it surpasses even Vienna and accomplishes

for the western Slavonic world what the South Slavonic Academy of Arts and Sciences at Agram (Croatia) (*Jugoslavenska Akademija znanosti i umjetnosti*) accomplishes for the south and that of Petersburg for the eastern Slavonic world. Both the latter academies are older, it is true, the Agram Academy having been founded in 1836 as "*erudita societas*," and as an academy in 1861, while that of St. Petersburg (*Imperatorskaja Akademija nauk*) began its activity in 1725 with foreign academicians throughout. The Academy of Sciences at Cracow was founded only in 1872, taking origin from the Society of Sciences which had existed since 1815.

The intellectual movement of the Bohemian nation has brought about the youngest but most active academy in the Austrian Monarchy. The imperial consent to the statute for the establishment of the Bohemian Emperor Francis Joseph Academy of Sciences, Literature, and Arts (*Česká akademie císaře Františka Josefa pro vědy, slovesnost a umění*) was granted on January 23, 1890; on October 18 the first general assembly took place. On May 18, 1891, the solemn opening of the academy was celebrated. This academy is divided into four classes: (1) Philosophy, state, law, and social sciences, history, and archaeology; (2) mathematics, natural sciences, and medicine; (3) philology; (4) belles-lettres, fine arts, and music. The many publications of this academy are of the highest order and importance.

In fact among all the Slavonic peoples, not only in Austria and Russia, but also in the Danube Principalities, Bulgaria and Servia, this intellectual movement is going on and giving vent to its energy by the establishment of universities and academies of sciences.

The academy of Cracow has a fixed endowment of 16,000 florins from the Government; 20,000 florins in 1895. Its protector was Archduke Karl Ludwig (died a few weeks ago); the vice-protector is the Polish ex-minister of finance in Austria, the former professor of political economy at the University of Cracow, Julian Dunajewski; its president, Stanislaw Count Tarnowski, professor of Polish literature. The academy is divided into (1) the philological department, (2) the historico-philosophical department, and (3) the department of mathematics and natural sciences.

Since the greatest scholars of the Polish nation are members of the Academy of Sciences in Cracow (beside some eminent foreigners and the corresponding members), it may be appropriate to give the names of the actual members, to convey an idea of Poland's greatest scholars of the present time.

In the philological department [besides a few university professors of Cracow in the respective departments, Stefan Pawlicki, professor of dogmatics and religious philosophy; Fryderyk Zoll, professor of Roman law; Franciszek Kasperek, professor of international law and philosophy of law; Franciszek Piekosiński, professor of old Polish law; Ludwik Teichmann, professor of anatomy; Napoleon Cybulski, professor

of physiology; Franciszek Michał Karliński, astronomy and higher mathematics; Szczesny Kreutz, mineralogy; Józef Lepkowski, archaeology; Wincentz Zakrzewski, general history; Stanisław Tarnowski, Polish literature; Stanisław Smolka, Polish history; Józef Rostafiński, botany; Lucyan Malinowski, Slavonic philology; Edward Janczewski, anatomy and physiology of plants; Kazimierz Morawski, classical philology; Maryan Sokolowski, history of art; Emil Godlewski, agricultural chemistry]: Baudouin de Courtenay, University of Dorpat; Alex. Brückner, University of Berlin; Jan Gebauer, Prague; Józef Hampel, Budapest; Vatrosl. Jagić, Vienna; Anton Kalina, Lemberg; Wład. Nehring, Breslau; Court Councillor Julian Claczko; author Wład. Lozinski, Lemberg; Wład. Łuszczkiewitz, professor of the school of arts, Cracow; Anton Malecki, University of Lemberg; Wład. Spasowitz, University of Petersburg; Anton Petruszewitz, custodian of the cathedral at Lemberg; Stojan Novaković, prime minister, Belgrade; Sir Kasimierz Stronczyński, Piotrków; and 19 corresponding members. The director of this department is the classical philologist at the University of Cracow, Kazimierz Morawski.

These men represent the highest work that is being performed in the domain of Slavonic philology, language, and literature in general and Polish in special.

In the historico-philosophical department, Sir Alfred de Arneth and Leon Bilinski, directors of the House, Court, and State archives in Vienna; August Count Cieszkowski, replaced by Michał Bobrzynski, vice-president of the school council of Galicia, Lemberg; D. Mendelejew, Petersburg; Bishop William Fraknoi, Budapest; Udalrich Heyzmann, professor in Cracow; Wład. Tomek, University of Prague; Albert Kętrzyński, director of the Ossolinski Institute, Lemberg; Bishop Likowski, Posen; Edward Rittner, Vienna; Albert Sorel, secretary of the Senate, Paris; Józef Supinski, Lemberg; Jacob Caro, University of Breslau; Adolf Pawinski, University of Warsaw; Anton Randa, Prague; Isidor Szaraniewicz and Thad. Woiciechowski, Lemberg; Heinrich von Zeissberg, Vienna; and 18 corresponding members. The director of this department is the professor of Roman law, Fryderyk Zoll. There has never been in Poland such a scientific movement, especially in the domain of Polish and Slavonic history, as at present. It is perhaps only surpassed by the revival of national learning in Bohemia, where the Czech University of Prague was absolutely severed from the old common university with its German preponderance, and opened in the academic year 1882-83. The Bohemian technical high school in Prague was erected in 1868, and has been administered as a State institution since 1875. Owing to this scientific movement the historical sciences have been marvelously revived, but, although it would be unjust to limit the many historical scholars of the Polish nation, still the above names fairly represent the leaders of thought in that science.

There is one great Polish historian in the garb of a novelist who has not yet attained the rank of an academician; it is Henryk Sienkiewicz, but he has attained the rank of the foremost Polish historical novelist, and may be well compared with the great German historical novelists Gustav Freytag, Felix Dahn, and Joseph Victor von Scheffel, who have been overwhelmed with academical honors in Germany. As these great historical novelists have illuminated German history and made it popular and accessible to the broad masses of the German people more than the tremendous volumes of the *Monumenta Germaniæ Historica* could ever do, so has Henryk Sienkiewicz in his three admirable historical novels, *With Fire and Sword*, *The Deluge*, and *Rodzina Polonieckich*, performed the most masterly work for the illustration of the downfall of the Commonwealth under King Jan Kazimierz.<sup>1</sup>

In the mathematical scientific department, Benedykt Dybowski, University of Lemberg; Heinr. Ferd. Hoyer, Warsaw; Franz Mertens, University of Graz; Julian Niedzwiedzki, Lemberg; Louis Pasteur (deceased), Paris; Bronislaw Radziszewski, Lemberg; Eduard Strassburger, Bonn; William Thomson, Glasgow; Rudolf Virchow, Berlin; Wład. Zajaczkowski, Lemberg; Jan Franke, Lemberg; Marcell Nencki, University of Petersburg; Giov. Schiaparelli, director of the Astronomical Observatory, Milan; and 16 corresponding members.

This Imperial Academy of Sciences, in connection with the great Jagiellon University of Cracow, is undoubtedly the center of the highest learning in the Polish nation, and if Warsaw is still considered as the political capital, Cracow is surely to be considered as the intellectual seat of Polonism.

Cracow and Lemberg are the Polish universities par excellence; but as the latter has the strong Ruthenian element of Galicia to contend with, the former is the rallying point of the Polish students of the three adjoining countries, who wish to be educated in the Polish spirit and culture. The number of students in 1892 was 1,227, which increased in 1893 to 1,283, but fell off in 1894 to 1,242, and rose to 1,290 in 1895 (summer semester, 1,230). Of these, 1,137 were regular students who had fulfilled all the preceding conditions before matriculation—i. e., were provided with the certificate of maturity for university studies—and 105 were hearers who are not admitted to the State examinations without having subsequently fulfilled the conditions required. There were 66 (Catholic) theologians, 486 students in law, 517 in medicine, and 173 in philosophy. In 1895 there were in theology (Catholic) 69, in jurisprudence 608, in medicine 438, in philosophy 128, in agriculture 47, and in pharmacy 14. The present rector is Stanislaw Smolka.<sup>2</sup>

The university is in its four faculties well represented by the most

<sup>1</sup> Since this section was written I find in *Minerva*, *Jahrbuch der Gelehrten Welt*, 1895–96, that the celebrated Polish author has been elected to the full membership of this distinguished body.

<sup>2</sup> The rectorate of Professor Kreutz has just been announced for the ensuing year.

distinguished professors, mostly Poles. There are 7 full professors in the Catholic theological faculty who teach divinity in a four years' course, as follows: Pastoral theology, exegesis of the New Testament, church history, general dogmatics and religious philosophy, special dogmatics, exegesis of the Old Testament, Semitic languages, canon law.

The faculty of law and political sciences is represented by 8 full professors, 4 associate professors, and 4 privat-docenten, who prepare the students for the legal profession in a four years' course. Instruction is given in Roman law, philosophy of law and international law, Austrian civil law, Austrian political and administrative law and statistics, penal law and pleading, canon law, old Polish law (by 2 professors), political economy, commercial and banking law, Austrian law of finance and finance sciences, and German law. The Polish and local Galician legislative conditions, however, do not seem to be as well represented as in the same faculty of the Lemberg University. Two great seminaries—that of the legal sciences and that of the political sciences—provide for the practical education of the students.

The medical faculty is conducted by 12 full professors, 11 associate professors, and 7 privat-docenten. It is safe to say that no branch of the medical sciences is neglected, and it is only to be stated that the instruction in medicine, distributed over a course of five years, is as complete as possible. Practical education is given to the students in the medical clinic, in the surgical clinic, in the anatomical-surgical cabinet, in the ophthalmological clinic, in the gynecological clinic, in the aseptic-gynecological laboratory, in the pathological-chemical institute, the anatomical institute, the pharmacognostical institute, the physiological institute, the pathological-anatomical institute, the institute of veterinary surgery, the medico-forensic institute, the pediatric clinic, the clinic for skin and venereal diseases, and the institute for general and experimental pathology. All these medical institutions are carried on at an annual expense of 42,728 florins.

The philosophical faculty has 23 full professors, 5 associate professors, 11 privat-docenten, and 1 lector in French. Twelve members of this faculty belong also to the Academy of Sciences. The branches taught in this faculty are astronomy and higher mathematics (an astronomical observatory, founded in 1791, furnishes it with the scholarly apparatus for research); mineralogy (mineralogical institute); archæology (archæological institute); general history, Austrian history, and Polish history (historical seminary); Polish literature and Slavic philology (Slavonic seminary); botany, anatomy, and physiology of plants (botanical laboratory), to which department the botanical garden of Cracow, administered at an annual cost of 3,500 florins, is attached; mathematics with a mathematical seminary; geography; German philology, with a seminary; classical philology, with a philological seminary and proseminary; romance philology; physics, with a physical institute; history of art, with a corresponding institute; geology

and paleontology, with a geological institute; chemistry and agricultural chemistry, with two chemical institutes and laboratories and an institute for agricultural chemistry; zoology and zootomy, with the two respective institutes; farming and agriculture, cattle raising, with institute; comparative anatomy; philosophy, pedagogics and didactics, and Sanscrit, represented only by 1 privat-docent, respectively. The laboratories and institutes are conducted at an expense of at least 12,100 florins a year.

*The university library.*—The library attached to the university is one of the oldest and richest in the Austrian Monarchy. At the end of 1892 it contained 213,779 works, in 283,858 volumes; 5,150 MSS., in 6,485 volumes; 1,702 maps, 7,693 engravings and pictures, 3,057 musical works, and 9,476 coins and medals. At the beginning of 1895, 224,774 works, in 300,029 volumes; 5,321 MSS., in 6,755 volumes; 1,751 maps, 7,730 engravings, 3,222 musical works, and 9,481 coins and medals. The library has a most interesting history, which has been excellently narrated by G. S. Bandtke, *Historia biblioteki Uniwersytetu Jagiellońskiego w Krakowie*. Krak. 1821.<sup>1</sup>

When King Władisław Jagiello reorganized the University of Cracow, in 1400, and granted to it rich endowments and revenues, a library was also founded and was continually improved. Endowment was left to it from time to time by public-spirited citizens. Andreas Olszowski, archbishop of Gnesen, left in 1671 the sum of 10,000 florins for the opening of a reading hall. In 1775 the newly established commission of education arranged the library, and attached to it and catalogued all the distracted collections of the bursæ and collegia of the university. After the third partition the library fell a share to Austria, to which State it has belonged ever since, except during the time of the independent republic of Cracow (1809–1846).

The manuscripts of the library are catalogued by Wład., Wiśłocki *Catalogus Codicum manuscriptorum bibliothecæ universitatis Jag. Cracoviensis*, Cracov. 1877–1881, 2 vols. The other treasures are described by Karol Estreicher. *Biblioteka Jagiellońska*. Kraków 1881, and *Przechadzka (guide) po bibliotece Jagiellońskiej*. Kraków 1882.

The library is maintained at an annual cost of 20,570 florins (21,470 florins in 1895) in addition to the regular fees, and was used by 2,356 readers and 2,383 guests; 6,000 works, in 15,000 volumes, were loaned out in the year 1894.

*The State archives.*—The archives of the town and rural forensic affairs of the palatinate of Cracow (*Archivum actorum castrensium et terrestrium palatinatus Cracoviensis*) were founded at the end of the eighteenth century by the unification of various smaller archives. They contain *Acta judicii capitanealis Cracoviensis* 1428–1792, *Acta judicii terrestres Cracov. colloquiorum generalium, judiciorum in curia regis*

<sup>1</sup> Cf. also Matejko, *Geschichte der Univ.-Bibliothek zu Krakau*, 1864, 8°, vide *Minerva*, p. 381.

et in conventione regni 1338-1642, 1767-1797, Acta juris supremi theutonici castri Crac. 1380-1794, Acta magnæ procurationis in arce Cracov. 1549-1794, Acta consularia et scabinalia civitatis Cracov. 1392-1797, Acta castra Bieicensis 1436-1793, Acta terrestria Czechoviensia 1401-1783. These archives are endowed with 6,000 florins.

As to secondary schools, Cracow has three gymnasia—that of St. Anne, founded in 1588, with 560 pupils; that of St. Hyacinthe, founded in 1858, with 458 pupils, and the Third Imperial Gymnasium, founded in 1883, with 497 pupils. There are several real schools, besides two theological seminaries. The following institutions supply instruction in all the other pursuits not covered by the university and the polytechnic school: The Polish State Commercial College, with 86 pupils and 2,000 florins state, subvention; the Agricultural College, the Tradesmen College, the Czartoryski Museum,<sup>1</sup> and the Academy of Fine Arts. The great painter Jan Matejko, who died in 1893, was the director of the last-named institution. Two State teachers' seminaries—one for males and one for females—both founded in 1871, have 183 and 240 candidates, respectively. The official language is Polish.

The Polish State Industrial School, with an architectural, mechanical engineering, and chemical department, and workshops for decorative drawing and designing, has 158 pupils and 135 in the trade school attached to it.

*The University of Lemberg (Lwów).*—An admirable history of the University of Lemberg, of 442 large octavo pages, was published at the end of the year 1894 by the two professors of the university, Drs. Ludwik Finkel and Stanisław Starzyński, under the title *Historia Uniwersytetu Lwowskiego, Lwów, Nakładem Senatu Akademickiego*, 1894. The older history up to the year 1869 was written by Professor Finkel, the last twenty-five years of its development by Professor Starzyński. For the first time, all the archives were opened and searched by the authors to give an authentic account of the history of Galicia and Lodomeria as related to the university.

After an introduction of 9 pages by the rector of 1894, Ludwik Cwikliński, a list of the rectors of the university is given from 1784 to 1894.

The academical schools before the foundation of the university are treated at length. In the same year in which the Jagiellońska Akademia was founded, two months after the issue of the letter patent erecting the studium generale at Cracow which was "to attract the dwellers of distant lands" (*longinquarum incolarum regionum ad eius allicere accessum*),

<sup>1</sup>This museum was originally founded, in 1813, by Prince Adam Czartoryski, at Puławy, on the Vistula, and taken to Petersberg in 1830, but a part of it was rescued and carried to Galicia and Paris. In 1876 the whole collection was carried to Cracow. The museum contains 100,000 volumes, 5,070 MSS., and 1,202 documents. *Catalogus manuscriptorum musei principum Czartoryski Cracoviensis*, edid. Jos. Korzeniowski. Fasc. I-III, Crac. 1887-1891; see *Minerva*, p. 383; 1895-96.

according to the *Codex diplomaticus univ. studii generalis Cracoviensis*, ed. 1870, King Jagiello ordered a high school ("szkoła metropolitalna") to be erected at Lemberg and to be governed by the commune itself (*ut ipsi eives scholas construant edificent et reforment rectoremque scholarum elegant valentem et plebano presentent.*)<sup>1</sup> For two centuries this metropolitan school was in a flourishing condition. Its pupils were divided in three classes—*primani, secundani, et tertiani*. Instruction was given not only in the seven arts, but also in Latin, and with the dawn of the renaissance, in Greek, too. The graduates of this school study philosophy in Cracow, and in the foreign universities of Padua, Bologna, Rome, and Paris, whence they bring home their doctorates. Among its many distinguished scholars the three greatest names of the early epoch of Polish humanism—Bursius, Ursyn, and Simonides—are grouped around this school in the last quarter of the sixteenth century until they are drawn to the famous new academy founded by Jan Zamoyski.<sup>2</sup> "Whatever there is of brilliant scholarship in our city," write the aldermen of Lemberg as late as 1662 to the rector of the University of Cracow, "is derived from the Metropolitan Academy. Our Senate, our Government, is composed in its majority of pupils of this academy."

When about the middle of the sixteenth century, during the storms of the Reformation, not only the Academy of Cracow, but all the other schools of renown began to become disintegrated, there sprang up Protestant, Calvinist, and Dissenting schools, and against them Catholic schools, ready and prepared to war for the old faith. All the other schools fell, as it were, into lethargy waiting for better times. With especial zeal the Society of Jesus undertook to spread education among the Catholic youths to make them strong for the impending battle. The Jesuit schools, called *collegia*, sprang up in all the Catholic countries. Introduced into Poland in the year 1564 by the famous Cardinal Hosius, the founder of the still flourishing Lyceum Hosianum in Braunsberg (Prussia), they established colleges in all the larger towns of Poland. In 1584 Jacob Wujek, S. J., a famous Bible scholar, and Benedykt Herbest, S. J., some time professor in the Metropolitan Academy, came to Lemberg and began scholastic work. In the next year a rebellion arose against the Jesuit fathers, but Aquaviva, the then general of the order and the author of the celebrated *Ratio-studiorum* of the Jesuit schools, succeeded in establishing a permanent settlement in 1591, the first prefect (superior) of which was Martin Laterna, a scholar of the Braunsberg school and of the Academy of Wilno, the adviser of King Stephen Batory, and the author of the *Spiritual Harp*. In 1596 there were already in the Lemberg college 6 professors and 1 superior. In 1608 it was raised in rank, had 32 professors, among whom were 16

<sup>1</sup> Cf. also H. Denifle, *Die Entstehung der Universitäten des Mittelalters bis 1400*, Berlin, 1885, p. 9.

<sup>2</sup> Cf. J. Kallenbach, *Les humanistes polonais* Fribourg, 1891, pp. 19-45; also my article "Zamoyski," *Johnson's Universal Cyclopedia*.

priests, and 200 students. The humanities were taught by 3 professors, moral theology by 2, controversial theology by 1. In 1612 a philosophical, in 1613 a mathematical course, were added. In 1633 the number of students reached 550 and the college became more flourishing; but the frightful wars that swept over Poland, the Cossack and Tartar invasions, the Russian, the Swedish, the Brandenburg wars, so graphically described in Henryk Sienkiewicz's masterly historical novel, *The Deluge*, gradually ruined the college. In 1649 there were only 26 students; in 1653 only 4 theological hearers; in 1656 the theological course was entirely closed.<sup>1</sup>

When the waters of the deluge that had swept over Poland began to subside, King Jan Kazimierz turned his attention to the city of Cracow, which almost lay in ruins. In January, 1661, was issued from the royal chancery the order for the foundation of the academy or university of Lemberg, which was to be placed on the same footing with the universities of Cracow and Wilno. The very interesting Latin document is reprinted on pages 21, 22, and shows the pride of the King in the Polish institutions of learning and his desire to emulate his great predecessors. The university was to be founded under the auspices of the Jesuits:

\* \* \* *faciliter ac libenter in animum induximus, ut Collegio Leopoliensi Societatis Jesu Academicæ dignitatis accessio Nobis annuentibus fiat, titulusque Universitatis deferatur. Damus igitur potestatem in eodem Leopoliensi Societatis Jesu Collegio Generale Studium in omni licita facultate constituendi: Theologiæ nimirum tam Scholasticæ quam Moralis, Philosophiæ, Matheseos; Juris utriusque, Medicinæ Liberaliumque Artium et Disciplinarum ac Scientiarum omnino omnium, quascunque prædicti patres Societatis Jesu tractandas ibidem per se vel per alios censuerint, pro ipsorum arbitrio ac instituto, consuetoque Academicarum atque Universitatum more et praxi.* \* \* \*

But there was an outcry all over the Kingdom against this foundation. The Jagiello university especially resented "the interference of the Jesuits with its own rights and privileges." The Academy of Zamojski, too, opposed it. Even the commune of Lemberg—senatus populusque Leopoliensis—arose against the foundation. And, indeed, the school was never successful; in 1672 only one class was opened; in the humanities and philosophy there were only a few students. Even when, in 1677, the number rose to 500, among whom were the sons of the most distinguished families, and, though physics and anatomy were taught, for which no privilege existed, as appears from an edict of Augustus II (May 13, 1706), "that only the one university of Cracow shall have the right of the four faculties," the academy could not stand against the public opinion of the whole country. In spite of a royal

---

<sup>1</sup>The principal source for the history of this college is a MSS. in the Imperial Library of Vienna: "*Historia collegii Leopoliensis Societatis Jesu manu propria Matthiæ Wielowiez pro tunc (1664) rectoris diligentissime collecta, etc., descripta ad annum 1665, quo anno obdormivit in Domino.*" The best account on the Jesuit colleges in Austria is given by J. Kollé, *Die Jesuiten-Gymnasien in Oesterreich*, Prague, 1873.

edict of 1763, however, to close the academy, and a papal renunciation of the bull granting its establishment, instruction was carried on till the dissolution of the order by papal decree. (Bull of Clemens XIV of 1773.) Meanwhile the political upheaval of the first partition of Poland entirely changed the constellation of the affairs of Lemberg as well as those of the whole realm.

Under Austrian rule Galicia had the advantages of the school reform carried on by Empress Maria Theresa in all her dominions.<sup>1</sup> Count J. A. Pergen, the director of the Oriental Academy in Vienna, who had elaborated a masterly plan of public education, but a rash and radical man who would "with one stroke of the pen revolutionize everything," was appointed the first administrator and governor of the newly acquired province of Galicia with almost sovereign powers. The edict of appointment<sup>2</sup> reads as follows: "*Cum plena facultate, ut nomine Nostro (i. e., Mariæ Theresiæ (occupatas provincias administraret et quidquid ad ordinandam instæ administrationis normam spectare visum fuerit, in opus redigat.*" First of all the bad sanitary condition of the country and the great mortality made the establishment of a medical college indispensable; physicians, surgeons, and midwives were wanting; the other higher schools could be gradually founded. Thus a number of eminent medical men were dispatched from Vienna to establish the school and to organize medical service over the new province.

The public schools, being in a wretched condition, had to be reorganized and put under proper inspection. The Jesuit college and the academy were transformed into an Austrian lyceum, professors for the German language were appointed, chairs for logic, metaphysics, and ethics as well as for all the branches of jurisprudence were established, even mechanics and technology, cartography, and geodesy for the surveying of the new territory were taught. In 1776 the Collegium nobilium or Collegium Theresianum (Ritterakademie) was established for the sons of the noble families of Galicia. All these new schools were administered by a special commission in Lemberg established by the Empress for the Galician schools (in *Studiensachen aufgestellte k. k. Commission in den Königreichen Galicien und Lodomerien*).

The Empress conceived the idea of founding a university in Lemberg as early as 1774. In 1776 the imperial chancery wrote to the Lemberg government on the question, "whether the city would be suitable for a university rather than Zamość," where an academy already existed, or Przemyśl which lay in the center of the country and was the seat of a bishop. But the plan did not mature during her life. An edict of 1777 speaks only of "several trunks (corpora) of higher schools;" there was not one large body which could be called a university. The war of the

<sup>1</sup> Cf. J. A. Helfert, *Die Gründung der österreichischen Volksschule durch Maria Theresia*, Prague, 1860; Adolf Beer und Franz Hochegger, *Die Fortschritte des Unterrichtswesens in den Kulturstaaten Europas*, Vienna, 1867.

<sup>2</sup> Cf. *Edicta et Mandata universalia Galiciæ*, Lwów, 1773.

Bavarian succession, the difficulties with Prussia, and the death of the great Empress in 1780 prevented the establishment of a great university in Lemberg. Her noble son, Joseph II, finished in 1784 what his great mother had begun,<sup>1</sup> and the present Emperor laid the last corner stone by the establishment of the medical faculty in September, 1894.

Emperor Joseph II, the most enlightened ruler of Austria in the last century, wanted the university to be built anew, not handicapped by any old privileges and duties, as a monument of modern times. Roman Catholic and Greek orthodox theology were to be treated side by side. The German and Roman law (*ius publicum für Reichsgeschichte und Staatenkunde*), heretofore the only branches taught in the faculties of law, were to be enlarged for the special needs of the Polish population (Wolf, p. 6: "Da diese Kanzeln sich meistens nur mit dem deutschen Staatsrechte und der deutschen Staatsgeschichte beschäftigen, diese aber für die galizischen Einwohner nie von einem besonderen Nutzen sein kann"). Never was a university founded with such a high spirit of liberty, generosity, and toleration for the individuality of a conquered nation, never were the good wishes for the divided nation more sincerely expressed than in Emperor Joseph's diploma of October 21, 1784:

\* \* \* Die landesväterliche Sorgfalt, welche unser vorzügliches Augenmerk jederzeit auf die Bildung der Jugend lenket, hat uns bewogen für unsere Königreiche Galizien und Lodomerien, dann die Herzogthümer Oswięcim und Zator eine hohe Schule oder vollständige Universität in der Hauptstadt Lemberg zu errichten. \* \* \*

From such beginnings the university arose and through many vicissitudes reached its present high standard, in numbers the fourth university of the Austrian Crown (after Vienna, Budapest, Prague). As to the Austrian possessions of the old Kingdom of Poland the University of Lemberg is the second great center of Polish learning of the highest order, though in numbers it surpasses even the University of Cracow by 141 students (cf. *Minerva*, 1895-96). Lemberg (*Lwów*), being the principal city in the old palatinate of Little Russia (*Ruska*) in the Polish and restricted sense of the term, has a strong *Mało-Russian* or *Ruthenian* population with their own language, to which large concessions must be made in the university and higher and lower schools. The *Staropigiński* Institute is devoted to the encouragement of the study of the *Mało-Russian* language, and has issued some important works, such as editions of old South Russian chronicles. A good library is attached to the institute.

King Augustus III intended to establish a university in Lemberg, and even obtained the sanction of Pope Clemens XIII in 1759; but the disturbances of the Seven Years' war did not allow this plan to mature. Only in 1784 was the old plan realized by the great and noble reformer,

<sup>1</sup>G. Wolf, *Geschichte der Lemberger Universität*. Kleine historische Schriften, Vienna, 1892.

Emperor Joseph II; the university later on, bearing the name "K. K. Franzens-Universität in Lemberg (Cesarska Krolewska Uniwersytet imienia Cesarsza Franciszka I we Lwowie)," was founded at this time without the sanction of the Pope. On the 3d of November, 1784, the solemn inauguration took place; but it was not prosperous at first, and in 1803 the university was changed into a simple lyceum. On the 21st of November, 1817, it was reestablished and reorganized as a university, without a medical faculty, however, which was established only in September, 1894. During the Polish Revolution, in 1848, the bombardment of the city also damaged the university building, but the most irreparable loss was the burning of about 40,000 volumes of books.

The old policy of the Austrian Government having been the Germanization of its Polish domain, the language for instruction and affairs was German throughout until the 22d of March, 1862. The necessity of allowing perfect freedom in the use of the native Polish and Ruthenian languages was then acknowledged. Since July 4, 1871, the Polish language has been generally used. In the theological faculty, however, the lectures and seminary instruction are given in the Latin language, with the exception of pastoral theology, catechetics, and methodology as well as pedagogics which are given in the Polish and Ruthenian (Russian) languages. In the law faculty all lectures are delivered in Polish excepting the courses on the Austrian penal laws and penal process by 1 professor and 1 privat-docent which are delivered in Ruthenian. Of course, Ruthenian philology and literature and German philology and literature are taught in their respective languages. With the establishment of the medical faculty in the academic year 1893-94, the university is now complete.

The financial management of the university, which, of course, is a State institution, was in 1892 conducted with an appropriation of 106,800 florins, which rose to 245,356 florins during the fiscal year 1895, the Government contributing 213,674 florins. An extraordinary appropriation of 14,100 florins served for the purchase of the scientific apparatus in the chemical laboratory (1,000 florins), changes in the university building (4,100 florins), last installment for the erection of the chemical institute (4,000 florins), second installment for the scientific equipment of the latter institute (1892).

In 1893 the university expenses amounted to 169,805 florins, toward which sum the Government had to contribute 158,578 florins.

The university, like all the other Austrian universities, is divided into four faculties—the theological, the law, the medical (about which no data have yet been given out), and the philosophical faculties, the latter embracing both the historico-philological and the physico-mathematical faculties of Warsaw and most of the other Russian universities.

At the head of the University of Lemberg stands the Imperial Royal Academic Senate (Cesarski Krolewski Senat Akademicki), composed of

the rector magnificus,<sup>1</sup> at the same time the president of the academic council, the prorector, i. e., the rector of the preceding year, the deans (dziekani) of the faculties, and the deans of the preceding year (pro-dziekani), 1 delegate from each faculty, respectively, and the secretary and notary, 12 members in all.

The academic senate takes care of the general affairs of the university, its property, the discipline of the collegium of instructors, and decides all disputes that may arise between the faculties. Disputes between the senate itself and the faculties are decided by the ministry for cultus and education.

The matriculation of students as regular hearers can take place only after they have passed the examination of maturity in a gymnasium. At the beginning of the academic year (October) 1892-93, there were 1,283 matriculated hearers in the University of Lemberg. In October, 1893, there were 950 regular and 124 special hearers, distributed as follows: 322 in theology, 585 in law, 167 in philosophy. In the summer semester, 1894, there were 1,413 students. In 1895 the number of matriculated hearers was 1,445.

The Catholic theological faculty of Lemberg is composed of 8 professors, 1 privat docent, 2 instructors (nauczyciele) for Polish and Ruthenian catechetics and methodology, respectively, and 2 adjuncts, all of them being priests and doctors of theology.

The study of theology, like that of law and philosophy, is distributed over four years. The curriculum in the summer semester 1893-94 will give a fair example of what is being done in theology at the University of Lemberg:

*First year.*—General dogmatics, five hours a week. Sacred history (historia sacra) from the beginning of the world to Christ's birth, including biblical geography and archæology and a special introduction to the Holy Scriptures, four hours a week. Exegesis to Jesaias from the Latin Vulgate, two hours a week. Exegesis to First Book of Samuel from the original Hebrew text, three hours a week. Grammar of the Arabic language with practical exercises, two hours a week. Philosophico-theological propædæutics, four hours a week.

*Second year.*—Special dogmatics, five hours. Introduction to the New Testament (second part), three hours. Exegesis of the New Testament from the text of the Vulgate, three hours. Exegesis of the New Testament from the original Greek text (Epistle of St. Paul to the Romans), three hours. Higher exegesis (exegesis sublimior) from the original Greek text of the Second Epistle of St. Paul to the Corinthians, one hour.

*Third year.*—Moral theology, five hours. Church history, five hours. Pedagogics, two hours (Polish and Russian).

*Fourth year.*—Pastoral (practical) theology, five hours (Polish and Russian). Institutions of canon law, five hours. Catechetics and methodology, five hours (Polish and Russian).

---

<sup>1</sup>The rector magnificus in the Austrian, as in the German universities—in opposition to the Russian universities, where he is appointed for an indefinite time, and like the American university president—is elected from the number of the professors ordinarii or emeriti for one year from each faculty alternately by a body of the professors (4 from each faculty) under the parting rector as chairman.

The distribution of students was as follows:

|                            | Theology. | Law. | Philosophy. | Total. |
|----------------------------|-----------|------|-------------|--------|
| Hearers.....               | 338       | 813  | 186         | 1,337  |
| Regular matriculates.....  | 296       | 788  | 113         | 1,195  |
| Hospitants.....            | 42        | 27   | 73          | 142    |
| Austrians.....             | 329       | 787  | 173         | 1,239  |
| Foreigners.....            | 9         | 26   | 13          | 48     |
| Poles.....                 | 90        | 672  | 146         | 908    |
| Russians (Ruthenians)..... | 248       | 137  | 40          | 425    |
| Germans.....               | .....     | 3    | .....       | 3      |
| Italians.....              | .....     | 1    | .....       | 1      |
| Roman Catholics.....       | 89        | 447  | 102         | 638    |
| Greek Catholics.....       | 248       | 149  | 40          | 437    |
| Greek Orientals.....       | .....     | 1    | 1           | 2      |
| Armenian Catholics.....    | 1         | 4    | 3           | 8      |
| Protestants.....           | .....     | 5    | 1           | 6      |
| Hebrew.....                | .....     | 206  | 39          | 245    |

Among the 73 hospitants (students not having the gymnasial certificate of maturity) there are 40 students of pharmacy.

The law faculty of the university is composed of 15 professors and 5 privat-docenten. The circle of studies contains the various aspects of the Pandects (Roman law) taught by 3 professors, German law, Catholic church law, philosophy of law, international law, encyclopedia of law and the political sciences, Austrian private law, Austrian penal law and equity pleading (in Polish and Ruthenian), political economy by 2 professors, Austrian civil law, Austrian banking law, Austrian statistics with a reference to the neighboring European States, commercial law, economic administration of Galicia, Polish private law and pleading, Austrian political law, science of political accounts in the Austro-Slavonic countries.

One of the most remarkable and beneficial features of the Lemberg law faculty are the numerous juridical seminaries, conducted by the most eminent professors: The seminary of administrative and political sciences, the seminaries of German international law, of Polish law, of canon law, of penology, of Roman law, and the seminary of political economy.

The philosophical faculty consists of 21 professors, 11 privat-docenten, 3 docenten, and 3 instructors in modern languages (analogous to the lectores of the German and Russian universities).

In the philosophical department proper the following branches were taught in the last summer semester: Logic with regard to the needs of the candidates for the middle or secondary schools (*szkół średnich*); elucidation of John Stuart Mill's Utilitarianism; methodology of the mathematical and cognate sciences; on the task and method of academic studies; introduction to the history of philosophy.

In the department of history and its auxiliary sciences, extensive studies in Austrian, Polish, classical, and universal history were conducted: The history of the Austrian State from the beginning of the Thirty Years' war to the close of the Karlowitz peace (1618-1699); history of the Slavonic peoples and states within the Austro-Hungarian

Monarchy; history of Poland and Lithuania in the fifteenth and sixteenth centuries; Polish diplomacies; survey of the history from the downfall of the Roman Empire to the thirteenth century; Italy at the time of the Renaissance; modern history; history of the pragmatic sanction; Raphael's life and works; history of Polish art in the nineteenth century. Two historic seminaries supply practical exercises for historical investigations. A full chair for the study of geography is provided.

The department of philology and literature has a classical and a modern division. The curriculum of studies is excellent and complete. The classics have had such an old citizenship in Poland that the standard of classical studies in the University of Lemberg can be stated as simply the highest possible. A philological seminary and proseminary aids in the very best training of the students in classics.

In the modern division, Polish and Slavonic literature are naturally the foremost. But the German language is also excellently represented; the history of German literature was studied last summer, and in the middle high German division of the Germanic Seminary Gudrun was treated. Unfortunately there is no scientific treatment (in the university sense) of English philology and the Romance languages, the former being represented only by one instructor (*nauczyciel*) twice a week, the latter by one instructor five times a week. Polish and German stenography are also taught.

The Slavonic studies are so much the better represented in the following courses: History of Polish literature from the second half of the tenth to the end of the fifteenth century, seminary exercises in the history of Polish literature, scientific Polish grammar, an elementary course in Old Slavonian, reading and interpretation of Servian poets. There are courses also in the history of Russian literature from 1709 to 1848, Old Slavonian and Russian language, seminary practice in Russian philology, which are conducted in Ruthenian.

Equally good and complete is the department of the mathematical and cognate sciences, with the following courses: Optics, thermodynamics, physics, electricity, magnetism, all branches of higher mathematics (with two mathematical seminaries), mineralogy, geology, geology of the Carpathian Mountains, botany, chemistry, pharmacognosics, etc. All these various scientific studies are properly aided by corresponding laboratories and museums: The physical museum, the meteorological observatory, the chemical laboratory (with a complete scientific apparatus), the mineralogical museum, the botanical museum and laboratory (with herbaria and collections), a botanical garden, a zoological museum, a pharmacognostic collection, an anatomical and physiological collection. More than 7,000 florins are spent on these laboratories every year. The course in pharmacy is usually completed in two years in scientific education and laboratory work in the botanical, chemical, and pharmaceutal laboratories.

The university library was founded at the same time as the university. The Garelli library, containing about 11,000 volumes, which was combined with various libraries of abolished Jesuit colleges after the suppression of the Theresian Academy in Vienna, formed the original stock of the Lemberg University library. It contained at the end of 1892, 120,900 volumes, 396 manuscripts, 241 documents, and 10,657 coins and medals. The financial support of the library amounts to 18,073 florins a year for salaries and purchase of new books.

This valuable library is fully described in Karl Reifenkugel's work, *Biblioteka uniwersytecka we Lwowie*, in the magazine *Przewodnik naukowy i literacki*. Lemberg 1873.

*Count Ossoliński Library*.—Besides the university library and as a supplement for the documentary study of Polish history, there is in Lemberg another great library of paramount importance, which is exceedingly rich in manuscripts and early printed Slavonic books; it is the Count Ossoliński National Institute (*Zakład narodowy imienia Ossolińskich*). It was founded in 1817 by Joseph Maximilian Count of Tenczyn and opened to the public in 1826. The aim of this beneficial institute is the collection of printed works, manuscripts, pictures, engravings, etc., and of antiquities of Polish origin, the publication of manuscripts and important works in its own printing office, aid to poor deserving Polish students, and the maintenance of a public reading hall.

There are in the library 91,400 printed volumes (besides 8,640 duplicates), 3,496 manuscripts, 1,168 documents, 2,810 autographs, 25,240 engravings, 856 pictures, 2,200 museum objects, 670 weapons, 1,880 maps and charts, 18,100 coins, and 4,237 medals. The report of 1895 gives 93,550 books (besides 8,740 duplicates), 3,601 MSS., 1,174 documents, 2,851 autographs, 25,511 engravings, 866 pictures, 2,237 museum objects, 670 weapons, 1,892 maps, 18,100 coins, and 4,237 medals.

Among the many publications on the treasures of the Ossoliński Library perhaps the most important are: *Biblioteka Ossolińskich*, *Zbiór materiałów do historyi polskiej* (collection of material for Polish history), Lwow, 1874 ff.; *Catalogus codicum manuseriptorum Bibliothecæ Ossolinianæ Leopoliensis*, Tom. I, II, III (still appearing). The institute had, in 1893, a fortune of 545,000 florins. The expenses were 17,780 florins. The Polish magnate, Prince Andreas Lubomirski, is the present curator of the institute.

*Archives for the Grod and Terrestrial Court Documents of Poland*.—These archives, founded in 1878 as a State institute, afford an indispensable mine of information to the student on the old Polish town and country court institutions and the forensic conditions of Galicia in general. It contains the documents of the ancient grod and terrestrial courts of the palatinates of Reussen, Cracow-Sandomir, and Belz and the starostaships of Oswięcin (Auschwitz) and Zator for the years 1409–1735.

The appropriation for the archives in 1894 was 6,000 florins.

The documents have been edited in 11 volumes. "Akta grodzkie i ziemskie," Lemberg, 1868-1886. (First volume edited by a commission; second to eleventh volumes by H. Liske); vide *Minerva*, p. 410.

*The Imperial Royal School of Technology in Lemberg.*—In the same year that the University of Lemberg was reorganized (1817) the first real school (Realschule) of Galicia was erected and thus a new stimulus given to the technical sciences. The school developed so that in 1835 a separation of the technical and commercial branches could take place. In 1843 this real and commercial academy was extended by a technical course, out of which gradually an academy of technology grew up. In 1846, when the Republic of Cracow was conquered by Austria, the institute of technology of that city soon outreached that of Lemberg, which lost in importance.

In 1871 the Polish language was introduced officially and the academy was built up as a school of technology (with the rank of a university) by the founding of new chairs. The regulations of 1872 put it on an equal footing with the other Technische Hochschulen in Austria, like Graz, Brünn, Vienna, Budapest, Prague (German and Czech).

The technical high school of Lemberg, like all the other Austrian high schools, consists of four professional schools—i. e., the school of engineering, of architecture, of mechanical engineering, and the chemico-technological school. The course in the schools of engineering and architecture requires five years, that in the other two schools four years. Regular students must have the certificate of maturity from a secondary (middle) school or a gymnasium, in which latter case they have to give sufficient proof of efficiency in geometry and free-hand drawing. Hospitants must be 18 years of age and give sufficient proof of their ability to follow the courses.

The administration of the institute in 1892 was carried on at an expense of 101,900 florins; in 1893, 105,648 florins, toward which the State had to contribute 100,975 florins; in 1895, 113,264 florins (107,445 florins Government contribution). In the same year there were 188 regular students and 12 hospitants in the school, and in 1895 227 students and 34 hospitants.

The instruction in these four branches is given by most eminent professors in all the technical branches usually taught in such schools, besides studies specially adapted to an Austrian school of technology, as, for instance, a course in taxation of whisky, beer, sugar, and mineral oils, encyclopedia of the science of forestry, Austrian political economy, and commercial and banking law. There are in the institution 19 professors, 9 honorary docenten, 11 privat-docenten, 1 lector in German philology, and 3 teachers in French, English, and water-color painting, respectively.

The school has a laboratory for general chemistry (yearly appropriation, 900 florins; extra allowance, 200 florins), a laboratory for chemical technology (yearly appropriation, 900 florins; extra allowance, 200

florins), a physical cabinet (600 florins), a technological cabinet (600 florins), an electro-technical institute (500 florins), a mineralogico-geological collection (400 florins), a collection of natural historic objects (210 florins), an observatory for higher geodesy and spheric astronomy (200 florins), collections of apparatus for mechanical engineering (700 florins), practical geometry (600 florins), architecture (Hochbau) (500 florins), engineering sciences (500 florins), mechanics (315 florins), street and water works, hydraulics (250 florins), ornamental drawing (120 florins), descriptive geometry (100 florins), knowledge of articles of merchandise (100 florins). A good technical library under the supervision of a full professor, and with an allowed expenditure of 4,960 florins, exclusive of fees (245 florins in 1891-92; respectively, 5,360 and 420 florins, in 1895), is attached to the Lemberg technical high school.

Five gymnasia, 1 real school, 1 Roman Catholic, and 1 Ruthenian-Catholic seminary in Lemberg (Lwów), complete the educational facilities of the present capital of Austrian Poland. According to the *Jahrbuch des höheren Unterrichtswesens in Oesterreich* of 1893, the status of the Lemberg secondary schools was as follows:

The imperial academic state gymnasium, with the Ruthenian language, dates back to the fourteenth century. It obtained its name "gymnasium academicum" in the first half of the eighteenth century; theological and philosophical courses were given at the school, but after the foundation of the Lemberg University (1784 and again in 1817) were transferred to the latter institution. By imperial order of May 31, 1873, Ruthenian was introduced as the official language. Five hundred and eight pupils were in attendance in 1893 in 8 classes. The second State gymnasium, with 467 pupils, founded in 1818, is German. The Francis Joseph state gymnasium, the fourth and fifth state gymnasia, founded in 1858, 1879, and 1892, with 624, 736, and 573 pupils, respectively, are thoroughly Polish, and show the growth of the Polish population and its educational proclivities.

The imperial state real school of Lemberg, founded in 1857, enlarged in 1872, has 430 pupils.

There is in Lemberg a State teachers' seminary with 150 male candidates and 62 male pupils in its preparatory class, and a similar institution for females with 204 candidates, and 30 pupils in the department for kindergarten education. Both Polish and Ruthenian are official languages.

One industrial school with Polish as the official language, and with the departments of architecture and industrial art, with trade schools in cabinetmaking, turning, artistic embroidery, decorative designing and drawing in an open drawing-room for women, and an industrial workshop help to complete the round of useful studies.

*Secondary schools in Galicia.*—Secondary schools are freely spread over the whole country to serve as feeders for the two Polish universities and the school of technology. Most of them are governmental

schools, and the few which are not, are under the supervision of the provincial school authorities and the minister of public instruction in Vienna, so as to insure the same high standard of scholarship which has to be reached in the imperial or state gymnasia and real gymnasia. The curriculum of all is, *mutatis mutandis*, equal to that of the other schools of equal grade in the monarchy, only all branches are taught in the Polish language by national teachers, thus propagating and increasing a specifically Polish culture, which makes this great province one of the most precious jewels in the crown of Austria-Hungary.

The following secondary schools in Galicia with Polish as the official language<sup>1</sup> may be mentioned:

The state gymnasium at Bochnia, with 365 pupils; founded in 1817. The administration and instruction is conducted by 1 director, 12 professors, and 6 associates (*supplenten*), about the usual number of the teaching force of such schools. All these officers are regular graduates of Austrian universities provided with their special *facultas docendi*.

The state gymnasium at Brzeżany, with 382 pupils; founded in 1805; completed in 1863.

The under gymnasium of Buczacz under the Basilian Brothers; founded in 1754 by the starosta, Count Nicolaus Potocki, with 346 pupils.

The private gymnasium of the Jesuits at Bąkowiec, near Chyrów, originated from the old convict school of the Jesuit Society at Tarnopol. The school, with its 8 classes and 306 pupils, has, under the ministerial decree of December 28, 1891, all the rights and privileges of a state gymnasium.

The Francis Joseph state gymnasium at Drohobycz, founded in 1858 as a communal school, taken under state control in 1874, the community granting it annually 18,000 florins, has 347 pupils.

The state gymnasium at Jaroslau, opened in 1868 as communal school, taken under state control by imperial decree in 1872, has 401 pupils.

The state gymnasium at Jasło, founded in 1868 as communal school, since 1875 administered by the state. The community takes charge of the building, heating material, and service, and pays an annual contribution of 500 florins. It has 496 pupils.

The state gymnasium at Kołomea, founded in 1861 as a communal under gymnasium. Since 1878 it has been a full gymnasium, with obligatory drawing in the lower classes. In 1892 the first parallel class with Ruthenian as official language was opened. It has 569 pupils.

The state gymnasium at Podgórze, opened on September 5, 1892, with 2 classes and 113 pupils.

The state gymnasium at Przemyśl originated in the Jesuit college founded in 1617. After the suppression of the order it received secular

<sup>1</sup> Jahrbuch des höheren Unterrichtswesens in Oesterreich. Bearbeitet von Joh. Neubauer und Dr. Josef Diviš. 6. Jahrgang, 1893. Wien, F. Tempsky.

teachers in 1773. The philosophical institute, opened in 1820, was combined with the gymnasium in 1849. With the scholastic year 1888-89 the first parallel class with Ruthenian was opened by imperial decree of July 29, 1887. There are 564 pupils in the Polish and 218 in the 5 Ruthenian parallel classes; together, 782.

The state gymnasium at Rzeszów, completed in 1858, has 605 pupils.

The Archduchess Elizabeth state gymnasium at Sambor existed as a Jesuit gymnasium from 1680 to the suppression of the order; was supported by the community from 1792 to 1815; since 1815 has been a state gymnasium; has had its complete 8 classes since 1853; 469 pupils.

The state gymnasium at Nowy-Sandec, founded in 1818 with 6 classes, was transferred to the Jesuits in 1839, provided with secular teachers in 1849, completed in 1866. The community pays annually 1,680 florins toward its support. It has 279 pupils.

The state gymnasium at Sanok was opened in 1881 with 2 classes; supported entirely by the community; it has 291 pupils.

The state gymnasium at Stanisław, founded as Jesuit gymnasium in the eighteenth century; it has 627 pupils.

The state gymnasium at Stryj, subventioned by the city with 5,000 florins; it has 342 pupils.

The state gymnasium at Tarnopol, established as a Jesuit gymnasium in 1820; with a philosophical institute in 1821; organized in 1850 as a full gymnasium with secular teachers; has 472 pupils.

The state gymnasium at Tarnów, established in 1784; complete since 1849; has 551 pupils.

The state gymnasium at Wadowice, complete since 1878, with obligatory drawing in the lower classes; has 269 pupils.

The state gymnasium at Złoczów, completed in 1881; subventioned by the city with 4,000 florins and all the necessary material; it has 296 pupils.

Two real schools (*Realschulen*) at Stanisław and Tarnopol, and the teachers' seminaries (normal schools) at Rzeszów (202 candidates), Sambor (Polish and Ruthenian, with 142 candidates), Stanisław (Polish and Ruthenian, with 195 candidates), Tarnopol (Polish and Ruthenian, with 197 candidates), Tarnów (165 candidates), and Przemyśl (with 115 female candidates) contribute to furnish the country with good primary teachers.

Higher female schools have not yet obtained full and due appreciation, yet good private and convent schools contribute largely to a high intellectual and moral education of women in Galicia.

#### EDUCATION IN THE ANCIENT POLISH PROVINCES OF PRUSSIA.

In the official *Jahresberichte über das höhere Schulwesen in Preussen*, by Conrad Rethwisch, Berlin, 1893, no instruction or education in the Polish language is mentioned, at least so far as the secondary schools

in Prussia are concerned. But the solution of the Polish linguistic and educational problem is not yet entirely accomplished. It still exists in three provinces of the Kingdom of Prussia, in the province of Prussia (proper), Posen, and Silesia.

Ever since Adalbert, Bishop of Prague, went to preach the gospel to Prussia, about the year 997, Prussia, as called by his companion Gaudentius, because it was inhabited by the Bor-Russians (Bordering-on-Russia), a fierce, warlike tribe closely related with the Letts and Lithuanians, this country was the Eris apple of the surrounding German and Slavonic powers. King Knut of Denmark and the Polish dukes, the Grand Masters of the Teutonic Order and the Polish kings, the Hohenzollern dukes, and later the Electors stamped their character and nationality upon the country, as St. Adalbert—according to Carlyle—"has stamped his life upon it, in the form of a crucifix." Thus its inhabitants are, according to their descent and language, Lithuanians or Letts, Masurs, Kures, Kassubes, but mostly Poles and Germans, the latter strongly mixed with Swiss and Palatine emigrants and colonists, French Huguenot refugees, so liberally received by the Great Elector, and Salzburg exiles, driven out by their archbishop. The Massurs live in the southern part of the government districts of Gumbinnen, Königsberg, and Marienwerder, and are unmixed Slavs as well as the Kassubes.

But this whole population, so long under the superior, leveling influence of Prussia, has been welded together, with the exception of the two Slavonic constituents, into one pseudo-German element, of course the purely German majority itself excepted. But the province of West Prussia, formed in 1878 for administrative reasons, contains still a Polish population, amounting to one-third of the entire population, among whom the Polish language is still cultivated and has a secondary place beside German in the schools. But a glance at the network of the most excellent German schools of all descriptions proves that this province is in Germanism equal to any other Prussian province beyond the Elbe.

"This acquisition [i. e., the share taken by Prussia in 1772]," says Frederick the Great somewhere in his memoirs, "was one of the most important we could make, because it joined Pommerania to East Prussia (ours for ages past), and, since it rendered us masters of the Weichsel River, we gained the double advantage of being able to defend that Kingdom (Ost-Preussen), and to draw considerable tolls from the Weichsel, as all the trade of Poland goes by that river."

Carlyle puts the adequate question, What became of West Preussen under Friedrich? and Gustav Freytag responds, not an impartial witness toward Poland, but in this case history corroborates his statement:<sup>1</sup>

*Acquisition of Polish Prussia.*—Frederick was the first conqueror who once more pushed forward the German frontier toward the East, reminding the Germans

<sup>1</sup> G. Freytag, *Neue Bilder aus dem Leben des deutschen Volkes*, Leipzig.

again that it was their task to carry law, culture, liberty, and industry into the east of Europe. All Frederick's lands, with the exception only of some Old Saxon territory, had, by force and colonization, been painfully gained from the Slav. At no time since the migrations of the middle ages had this struggle for possession of the wide plains to the east of the Oder ceased. When arms were at rest, politicians carried on the struggle.

*In what state Frederick found the Polish Provinces.*—Some few only of the larger German towns, which were secured by walls, and some protected districts inhabited exclusively by Germans, as the Niederung, near Dantzic, the villages under the mild rule of the Cistercians of Oliva, and the opulent German towns of Catholic Ermeland, were in tolerable circumstances. The other towns lay in ruins, so also most of the hamlets (*Höfe*) of the open country. Bromberg, the city of German colonists (founded by the Teutonic Order, but entirely Polonized), the Prussians found in heaps and ruins. No historian, no document, tells of the destruction and slaughter that had been going on in the whole district of the Netze there during the last ten years before the arrival of the Prussians. \* \* \* The country people hardly knew such a thing as bread; many had never in their lives tasted such a delicacy; few villages possessed an oven. \* \* \*

The peasant noble (unvoting, inferior kind) was hardly different from the common peasant; he himself guided his hook plow (*hacken-pflug*), and clattered with his wooden slippers upon the plankless floor of his hut. It was a desolate land, without discipline, without law, without a master. On 9,000 English square miles lived 500,000 souls, not 55 to the square mile.

Gustav Freytag is doubtless right about the then condition of that section of Poland. Mr. W. A. Day, in his above-mentioned Russian Government in Poland, pages 134–135, corroborates the statement. But Freytag is wrong when he puts all the blame upon the Polish government, administration, and necessary national character. The counter picture of what Germany, and Brandenburg in particular, was after the thirty-years war, and the fact that the Great Elector preceded the Great King in raising her people from absolute brutality, might have enabled the great novelist-historian to seek for the causes of desolation somewhere else.

*Frederick sets to work.*—The very rottenness of the country became an attraction for Frederick; and henceforth West Prussia was, what hitherto Silesia had been, his favorite child, which, with infinite care, like that of an anxious, loving mother, he washed, brushed, new dressed, and forced to go to school and into orderly habits, and kept ever in his eye. The diplomatic squabbles about this "acquisition" were still going on when he had sent a body of his best officials into this waste, howling scene to set about organizing it. The *Landschaften* (counties) were divided into small circles (*Kreise*); \* \* \* new parishes, each with its church and parson, were called into existence as by miracle; a company of 187 schoolmasters, partly selected and trained by the excellent Semler, were sent into the country; multitudes of German mechanics, too, from brick makers up to machine builders. Everywhere there began a digging, a hammering, a building; cities were peopled anew, street after street rose out of the heaps of ruins, new villages of colonists were laid out, new modes of agriculture ordered. The great canal was dug which connects, by the Netze River, the Weichsel with the Oder and the Elbe. \* \* \* And when Goethe, himself now become an old man, finished his *Faust*, the figure of the old King again rose on him and stepped into his poem, and his *Faust* became transformed into an unrelenting, creating, pitilessly exacting master, forcing on his salutiferous drains and fruitful canals through the morasses of the Vistula.

So far Freytag's description of the fact is essentially true and correct. Education, which was raised and increased by degrees from that time on, is materially a Prussian, i. e., a German, creation in those regions.

It was not, therefore, simply as a conqueror that Prussia came. Frederick believed that his "share" was necessary for her security, but it must be humanized and strengthened; its people must be educated—it was but natural with him and his successors that they must be educated in German. In villages the most remote, schools were introduced and churches rebuilt and endowed; Polish-speaking teachers were sent to the western provinces, where they could make no use of the Polish language and would even forget it; German teachers who knew no Polish whatever were sent to the east to teach in German exclusively, which they did frequently not to much advantage. Yet the "noiseless Germanization" of the old Polish provinces ever went on.

Meanwhile the originally Polish population became more conscious of its nationality, owing to its better educational equipment. A Polish nobility of the highest order of education and culture arose to cultivate the treasures of their old civilization. It can be safely stated that there is no Prussian subject of Polish nationality who objects to learning and mastering the German language. Only when there was coercion to unlearn Polish did a strong reaction take place against it from all strata of Polish society. Everybody knows and values German, but wants to be free to speak the language of his fathers at home, in the church, and in the school, at least for religious instruction. Although the point how far to concede the latter privilege is still a matter of controversy, forbearance and toleration is the present principle of the Prussian policy, and in consequence the representatives of the Polish population in Prussia are faithful supporters of the Government, loyal adherents to the monarchy and its enlightened dynasty. In the army, in the civil service, in all professional and practical pursuits, there are thousands of Poles in distinguished, frequently the most elevated, positions. A difference or discrimination exists no longer.

The primary-school controversy, how much Polish shall be taught in the elementary schools of the Polish-Prussian provinces, whether in religion alone, which can be felt and understood by the child only in the mother language, or also in other branches of instruction, has not subsided yet. Some sharp contrasts of opinion are yet existing, but the conciliatory, natural, tolerant opinion prevails, counting among its supporters men like Professor Delbrück, of the University of Berlin, editor of the influential *Preussische Jahrbücher*. Although Polish is still an important element in the eastern social life of Prussia, owing to a highly cultured nobility and an excellently educated "bourgeoisie," still it has no longer a preponderating influence.

But so much may be safely maintained: that the Polish language in Prussia will not die out and its literature will not be forgotten, since

the unique German universities develop it into an integral constituent of their Slavonic departments, and since more and more young men are taking up Slavonic studies in order to investigate, search, and complete the round of the Indo-European languages, literatures, and histories.

*Polish origin of the University of Koenigsberg.*—The University of Koenigsberg, which to-day is so absolutely German that the Polish seminary under H. Pelka and the Lithuanian seminary under M. Lackner are the only traces of its past, is more closely related with the history of Polish culture than is generally assumed. It was established in 1544 as Collegium Albertinum by Albert, Duke of Prussia, first cousin to King Sigismund Augustus, with the object of promoting religious, literary, and scientific culture among the German, Polish, and Lithuanian populations which inhabited the dominions of Prussia. Indeed, the university contributed much to the spread of Scriptural knowledge in Poland. The first Polish gospel and the first Protestant works in that language appeared under the auspices of this institution. More than that, the university obtained its consecration and baptism from Poland.

At a time when the privilege of the Pope, or his worldly representative, the Emperor, seemed indispensable to the foundation of a university, the first rector of Koenigsberg, Sabinus, applied to Cardinal Bembo to obtain, by his instrumentality, from the Pope, a charter for a university established with the avowed purpose of opposing his authority. Of course this request was declined by Bembo, and likewise by the Emperor. But Sigismund Augustus, King of Poland, although a Catholic monarch, granted to the Protestant university of Koenigsberg a charter, *proprio motu datum*, Wilno, March 28, 1561. He expresses by the above-mentioned charter that he was founding by it the said university (*universitatem condidimus et ereximus*), to which he gave equal rights with that of Cracow. This charter for the erection of a Protestant university was—in honor of Polish toleration be it mentioned—countersigned by Padniewski, vice-chancellor of Poland and Roman Catholic bishop of Przemyśl. When the privileges of that university were confirmed by Wladislaw IV, King of Poland, the act of confirmation was likewise countersigned by the vice-chancellor, Gembicki, also a Catholic prelate. The Polish monarch had an opportunity of exercising his supremacy as liege lord of Prussia in a manner beneficial to the privileges of the University of Koenigsberg in 1617. The Duke of Prussia, having appropriated to himself the right of nominating professors, which was vested in the university by its charter, the affair was referred to the King of Poland, whose commissaries decided in favor of the university.

The prime object of the theological faculty of the university was to train ministers fit to expound the word of God to the Polish and Lithuanian populations of Prussia in their national languages. Heretofore a translator was always standing near the pulpit, who translated

to the congregation the German sermon, unintelligible to most of the Poles and Lithuanians. The theological seminary established at the university contained 24 students, 14 of whom were for the Polish and Lithuanian languages. In 1425 a separate seminary was established for the Poles and Lithuanians of Prussia, besides a foundation made by the Princes Radziwill for Protestant scholars from Poland and Lithuania.<sup>1</sup>

*The Lyceum Hosianum; secondary schools in Prussia.*—The Lyceum Hosianum at Braunsberg, so called after the celebrated Cardinal Stanislaus Hosius, which at present is absolutely Germanized, is of thoroughly Polish origin. An adversary of the Reformation, Hosius, as bishop of Warmia, founded in 1568 the Jesuit college at Braunsberg, as a means for the suppression of the reformatory movement in Poland. The school became an episcopal seminary for the training of priests. After its destruction by the French in 1807 it was rebuilt, and by royal decree of May 19, 1818, was raised to a Catholic theological and philosophical faculty, and endowed by the secularized estates of the monastery of Neuzelle, near Frankfort on the Oder. At present, however, not a trace of its Polish origin is left.

The great number of excellent schools in the province shows that the Prussian Government neglects nothing to raise the standard of culture in the two provinces to a height never reached before.

There is a royal academy of fine arts at Koenigsberg, 16 gymnasia, 2 progymnasia, 6 real schools, 2 real progymnasia, 1 higher Bürger-schule (high school), 12 public high schools for girls, 8 middle schools for boys, 8 teachers' seminaries (male), 2 royal and 10 private preparatory schools for the latter, 2 schools of navigation, 2 schools of midwifery, 1 trade and 1 architectural school, the agricultural institute connected with the university, 2 (secondary) agricultural schools, and 7 lower agricultural schools, beside 4 schools for the deaf and dumb and 1 for the blind. Only here and there a little Polish is taught as a facultative branch, but otherwise the Germanization has been absolute and complete.

**Libraries:** Two cities in West Prussia are especially notable for their libraries—Danzig and Elbing.

The city library of Danzig was founded in 1591 by the donation of Giovanni Bonifacio Marchese d'Oria and increased by later purchases, donations, and legacies. It is especially rich in local, Polish, and German history, geography, literature, art history, and political economy. It contains about 70,000 volumes, among which there are 446 incunabula and 1,182 manuscripts. The library is especially rich in Polonica, relating to the history of Poland and her relation with Prussia. The first volume of a catalogue of the library relating to the manuscripts concerning Dantsic was published by A. Bertling, 1892.

The Danzig city archives, besides those of Lübeck, the richest city

<sup>1</sup> Vide Arnold's *Geschichte der Universität Königsberg*.

archives in North Germany, were arranged anew in 1850, by order of the Danzig city magistracy, for the public service and scientific use. They contain four chief departments: (1) The archive library, containing mostly manuscripts and chronicles, but few printed works; (2) the library of maps and plans, containing the oldest maps and views of the city and its territory; (3) the great collection of historical records and documents, most of them of the greatest historical value—the books of the national delegates, sent to diets and other missions, from 1429, the *acta internunciorum* from 1515 on, the records of the Hansa and the Prussian States; (4) the collection of documents, containing more than 50,000 numbers, the oldest from 1253.

The city library of Elbing, founded in 1601, increased in 1710 by manuscripts and incunabula from the Dominican monastery at Elbing after its suppression, contains about 27,000 volumes, 121 incunabula, 205 manuscripts, and 770 maps and engravings. The library is well catalogued.

*The Province of Posen.*—The Grand Duchy or Province of Posen has a population which is mostly Polish by descent and language, especially preponderating in the southeast of the province; but the German element is strongly represented, especially in the cities and towns, and is steadily progressing. Education is almost exclusively in German hands, though Polish is studied almost everywhere in the primary and secondary schools and from the pulpit.

There is no university in this province, owing to the close neighborhood of Königsberg, Berlin, and Breslau, but a network of excellent secondary schools is spread over the country.

There are 14 gymnasia, 2 progymnasia, 4 real schools, 13 middle schools, various high schools for girls, 5 teachers' seminaries (male), 4 royal preparatory schools for the latter, 1 (female) teachers' seminary, 2,187 public primary schools, 3 institutes for the deaf and dumb, 1 for the blind. Nevertheless public education stands lower in Posen than in any other Prussian province, sending the highest percentage of alphabets to the army, 8.55 per cent in 1884–85.

At the head of the Polish Roman Catholic clergy stands the Archbishop of Posen-Gnesen, now himself a Pole, under whom are the metropolitan chapters at Gnesen and Posen, the archpriesthoods, the collegiate abbeys and cloisters.

Among the finest buildings of the city of Posen, dating back to Polish times, are the city hall, built in 1580, Slavonic-Roman style, with a beautiful tower, built in 1730, and a rich collection of books; the palace, decorated with a magnificent frontage, with 24 Corinthian pillars, donated by Count Raczyński; the Dzialinski palace, with a rich collection of Polish documents; and the palace of the archbishop, with a large gallery of precious pictures and works of art, partly referring to Polish history. The city of Posen has 24 Catholic and 3 Protestant churches, among which the cathedral, built in Gothic style in 1775, is

the most significant. It contains valuable fresco paintings, numerous monuments and tombs, and the so-called golden chapel, which Count Raczynski, with some other Polish nobles, built in 1842 in Byzantine style and adorned with many works of art, especially the gilded brass monuments of the first Polish kings, Mieczyslaw and Boleslaw, executed by Rauch, the famous sculptor of the tomb of Queen Louise of Prussia.

The city is amply provided with excellent schools, namely, 1 real gymnasium, the building of which is an architectural ornament of the city; 2 gymnasia, partly with Polish instruction; 1 (female) teachers' seminary, 1 girls' high school, several boys' high schools, and a school of midwifery.

Posen, besides Gnesen, is one of the oldest Polish cities, and is still a center of Polish culture, education, and the seat of the Polish book trade in Prussia. After his conversion to Christianity, King Mieczyslaw founded here a bishopric in 996. By its trade with Germany the city became very flourishing and the seat of a "województwo" (military governorship). The work of Lukaszewicz, *Obraz historyczno-statystyczny miasta Poznania*, Posen, 1838 (German translation in 1881), gives a fair picture of such an old boundary town between the Germanic and Slavonic domain, its culture, struggles, aspirations, influence, life, and thought. No German author has from a German standpoint so finely defined the contrast between Slavonic and Teutonic life as Gustav Freytag, to repeat an earlier statement, has done in his *Credit and Debit*, and especially in his classical historical novels, *Die Ahnen* and *Bilder aus der Deutschen Vergangenheit*.

**Libraries:** The capital of the Grand Duchy of Posen has two important libraries, with a large stock of books and documents relating to Polish history, literature, education, and political conditions.

The family library of the counts of Raczynski was bequeathed as an eternal, particular property to the city of Posen on February 22, 1829, together with the newly built library building and an endowment of 189,500 marks. It contains 50,000 volumes (189 incunabula), 360 manuscripts, and 230 documents. The allowance for yearly expenditures is 4,600 marks. The library is well catalogued in 4 volumes by M. E. Sosnowski and L. Kurtzmann.

Besides the Raczynski library, the royal State archives in Posen have a large stock of Polish historical and court documents; about 3,000 documents from 1153-1793, Acta from 1793 on, grod books from 1386-1793; collections from the western and south Prussian times; also the very important and unique city archives of Posen, Gnesen, and Fraustadt, which do now and will for a long time furnish rich sources for the investigation of Poland and her relations to the surrounding neighbors, as well as for her standard of culture and civilization.

## CHAPTER XVI.

### ART EDUCATION IN THE PUBLIC SCHOOLS.

---

Inasmuch as the true industrial education is art education, the progress of the common schools in introducing instruction calculated to cultivate the taste of the pupils for genuine works of art is of great significance. The invention of new machinery is gradually driving out the drudgery of work by hand. More and more persons are laboring with the brain and fewer with the mere hand. With the increase of production by machinery more individuals in the community can be spared for those vocations which add ornament to goods. Fewer persons are needed to gather the raw material, more are needed to manufacture it into articles of luxury and ornament. Those nations whose workmen display the highest order of taste in the finish of their goods hold the markets of the world and increase more rapidly in wealth. Philadelphia, in proportion to its size, has a larger manufacturing population than any other city in the United States. It is interesting to note that by the generous benefaction of Drexel one of the best institutions for education in art has been founded. Dr. James MacAlister, the president of Drexel Institute, read the following paper at the annual meeting of the department of superintendence of the National Educational Association. In the light of the future of art education this address is of great significance:

#### ART EDUCATION IN THE PUBLIC SCHOOLS.

By JAMES MACALISTER, LL. D., *President Drexel Institute of Art, Science, and Industry.*

The social development of the last half century shows a steady growth in the recognition of the public school as one of the most important institutions of modern society. To the thoughtful man the future presents a number of social problems of the gravest import. Individual freedom from class and proscriptive tyranny has, in a broad sense, been secured. Public opinion, the aggregate of the majority of individual opinions, has become the sole basis of social order, and hence the binding force in modern society in what the majority of the people think or believe. We need to bring the full significance of this fact before us, and to consider that under this social dispensation all the baser elements of human nature are given as free play as are the higher elements, and that no man is restricted in his personal liberty

until he encroaches upon the liberties of others, before we can adequately comprehend the supreme importance of public education to the modern state.

John Fiske made a valuable contribution to education, as well as to the doctrine of evolution, when he pointed out the meaning of infancy. In his suggestive treatment of this subject he asks this question:

What is the meaning of the fact that man is born into the world more helpless than any other creature, and needs, for a much longer season than any other living thing, the tender care and wise counsel of his elders? It is one of the most familiar of facts that man, alone among animals, exhibits a capacity for progress. That man is widely different from other animals in the length of his adolescence and the utter helplessness of his babyhood is an equally familiar thing. Now, between these two commonplace facts is there no connection? Is it a mere accident that the creature which is distinguished as progressive should also be distinguished as coming slowly to maturity, or is there a reason lying deep down in the nature of things why this should be so?

He then points out the great advantage that has come to the race through what he calls the period of *mental plasticity*; that is, the period of infancy, youth, and adolescence, forming nearly one-third of a human life, during which the individual is trained for his social duties.

The social condition of man has now reached a high degree of complexity. This social condition can be protected and properly developed only so far as education provides for training the youth of a community for the duties and responsibilities incident thereto. With just as much thoroughness, with just as much care, we need, at the present time, to train our children to all that makes for high and noble living. As the Greeks trained for the conditions existing in the Greek state, as the Romans trained for the conditions existing in the Roman state, so also we must recognize the supreme importance of training in all that makes for the highest intellectual culture and refinement in human life. With the absence of the militant power in our American state we base our institutions entirely upon the dominance of the moral and spiritual faculties among men. Indeed, our social and political organization rests wholly upon the belief that the majority of men prefer good to evil, virtue to vice, and if we take a broad view of the active forces in the social organism, we see on every hand virtue grappling with vice, justice struggling with injustice; and in these struggles we see that success can be hoped for only as all the higher faculties of man are brought into play upon the side of justice and of virtue. To state the problem in a few words, our duty is to so organize the forces that make for right living that they shall always be the dominant power in the social organism; and it is only when we come to recognize this condition as fundamental to all growth in human well-being that we can get a proper comprehension of what is involved in public education at the present time.

When the education of the people is looked at from this point of view it is seen that its greatest power must be exerted where the

dangers to the social organism are greatest—that is, among the poorest classes. There is more need of the refining influences of the best education among the debased and neglected elements of population in our large cities than among the children of the rich and prosperous; and hence the movement of the last few years to carry the most improved forms of our education among the lowest classes is an indication of the growth of public sentiment in the right direction, and is a feeling that will undoubtedly grow in strength as social problems are more carefully studied.

We have seen in many parts of the country the growth of a very praiseworthy sentiment in favor of raising the national flag over our schoolhouses. The spirit that prompted this movement was a patriotic one, and marks the growth of a national feeling stronger than that of local interests. To the educator it should stand for more than a mere loyal impulse. The flag should be made to represent more than the sovereign power and unity of the union. Consider for a moment that in our large cities the great mass of the children see little or nothing of the government or the forces that bind society together except as presented by the policeman. What better instrumentality is there for inculcating in the minds of the young a respect for government and law than the schoolhouse? If we can lead the pupils to understand that the schoolhouse is provided by the State, is provided for all without distinction of race, condition, or creed; if we can make the schoolhouse a place of delight, and if we can secure within it the right sort of instruction, the training that shall tend to develop the noblest qualities of mind and heart, we shall then be fostering not simply a love of country for its past history and the heroic deeds of our ancestors, but we shall be cultivating a love of country for what the country is doing for the children themselves in preparing them for the highest and best purposes in life. Then will the flag mean something personal to every child. Then will the Government be to him not simply an abstraction, but he will come to regard it as his own great helper and sustainer. I welcome, therefore, this nationalization of the school as one of the most important of the educational movements of our time.

If, however, we make the school the symbol of the State to children, we must have taught in it all that the child requires to enable him to become a virtuous and a useful citizen. I do not think there can be any gainsaying this proposition. Indeed, it follows logically from the very establishment of a public school; and in our day, when such important responsibilities are attached to citizenship, the public school and its instrumentalities must be measured solely by its capacity to realize its complete function.

Nearly all the States have limited the instruction that shall be given in public schools, and some confine it within very narrow bounds. But we are gradually outgrowing the restricted ideas of education of fifty years ago, and our more intelligent communities are already anticipating

legislative action and are putting into their schools new subjects for study, new exercises which have for their object the development of the higher powers of the pupils and bringing them into the closest possible relations to the social needs of the future. Look for a moment at some of the movements that are going forward at the present time for enlarging the scope of public education. First we have the kindergarten, the recognition of the child in education, one of the most beneficent reforms that have ever come into the schools. Then we have physical training, the recognition of the fact that the citizen to have a healthy mind must also have a healthy body. Then we have the study of elementary science, which has for its object the bringing of the individual into the closest relations with his physical environment, that he may be able to enrich the world by his conquests over nature; that he may, to use the words of Bacon, become the "minister and interpreter of nature." Then we have industrial or manual training, which recognizes that labor is one of the conditions of man's existence in the world, and that it is through understanding labor and putting thought into labor that man is brought more completely into sympathy with his fellows. Then we have the study of history, not simply as the record of man's military conquests, but rather as showing the steady development of the idea of brotherhood among men. And then, in addition to these, we have the instruction in art, in some respects the most important of all, because its influence tends to enrich the mind as a whole through the development and training of its highest faculties.

Now, cavil as we may against these new studies; argue, as many persons do, upon the limitations which are, or ought to be, imposed upon the State, all these features must come into the public schools, and in no niggardly way. They must come in on the broadest possible basis, or there is danger that the present tendencies of social progress will miscarry. That their introduction into the schools will revolutionize much of our existing education can not be denied; but that need not give cause for serious regret. We may lay it down as a fundamental and incontestable proposition that existing social conditions demand these two things: First, the highest order of citizenship possible; and second, that public education must prepare for such citizenship at whatever cost.

I have prefaced these remarks because in discussing "Art education in the public schools" it has seemed desirable for the right understanding of the subject that it should be considered, not simply as a specialty in education, but rather in the larger aspect of one of the branches of general education that has become a necessity of our time. It is only by regarding the subject in its broadest relations that we can rightly consider how it should be treated in the schools. It will be understood that, in so far as the elementary schools are concerned, I am using the term "art education" as limited to drawing and color.

Of the new studies referred to, art education is the one least understood, and yet it is the one that in many respects is the most important. Next to language there is no branch whose scope and purpose is so far reaching or that bears more directly upon all that ministers to the best interests of the individual and of society. I am aware that many will regard this as far too inclusive a statement, and yet the history of civilization shows that the arts which deal with form and color have been at once of the highest value to man's utilitarian necessities and to those desires which nothing but the beautiful in nature and in art can satisfy. As a people, I think it will be admitted that we are deficient in art culture, and I do not think it will be denied that in consequence we are losing no small part of our intellectual heritage. This will not always be so. The indications are many that art is to have a new development in America, and on a new basis—the basis of humanity. The putting of industrial training into the schools is a great step in this direction, and will surely give a higher idea and a nobler purpose to the labor of common life. The putting of art education into the schools, side by side with industrial training, will not only give dignity to labor but will also permit the human feeling born of labor to find fit and adequate expression.

The use of the term "art education" in connection with the public education has long been a great bugbear to many so-called practical people. To such persons the word art in connection with the public schools savors of something unpractical, something that is for special pupils, something for the benefit of the few rather than for the many; and yet a right understanding of the relations of art to daily life shows this to be an entire misconception of the subject. It is a fact apparent to every observing person that the social life of our people is lamentably wanting in an appreciation of the beautiful in nature as the highest truth of nature, and of the beautiful in human life and work as the highest truth of character. This is apparent in the homes, in the amusements, and in the social customs of our people generally. In the scramble for wealth that is going on, people are losing sight of the fundamental ethical principles that hold society together, and are making a pretense of living. Now, art education, which is the study of beauty as the highest truth in nature and in human life, can be directed powerfully against this social demoralization, and hence we should be prepared to advocate art education in the schools as a potent agency in the uplifting and improvement of the community.

Goethe says:

The beautiful is greater than the good, for it includes the good and adds something to it. It is the good made perfect and fitted with all the collateral perfections which make it a perfect thing.

This is but a restatement of the old Platonic doctrine which still finds recognition in the most advanced theories of ethics and education. While we are extending our system of education on the utilitarian side,

we must not forget that the right enjoyment of life—that is, the exercise of the higher faculties—is as much a function of living as earning one's daily bread; and for our education to be useful, in the true sense of the term, we can not ignore the training of the æsthetic faculties as much for moral as for practical ends.

I have felt constrained to emphasize this aspect of the subject as of supreme importance at the present time, because in the general introduction of form study and drawing into the schools there seems to prevail an idea that their chief value consists in subserving industrial ends, or as aids to other branches of instruction. The great value of form study and drawing in industry, as well as their great use in educational training, can hardly be overestimated; but form study and drawing as the basis of art education need to be considered in much broader relations than their application in these directions.

Now, art in form and color is not an abstraction. It is something very tangible. It is man's creative work with material things; work in which he expresses himself, his power, his knowledge, his feelings, his ideas, for the use and the enjoyment of others. With every child there is born some degree of this power of individual creation, and closely allied to it is another and complementary power, that of curiosity or observation; and it should be a principle in all general education to lay hold of these two great instinctive powers and give them free play in the training of every child. True art education distinctly recognizes these two mental powers as its starting point, and seeks to stimulate and direct them so that they shall act and react on each other, and result in the creation of beautiful things, not so much for the gratification of selfish or individual desires as for giving joy to others. The method of training for this end has a dual aspect. On the one side the child is led, through the exercise of his observing powers, to discover that beauty is the highest truth in all material things, in fact, that there can be no beauty devoid of truth; and, on the other side, he is trained to express his observation of the beautiful in creations that shall minister to the needs and pleasure of man. It has been truly said that sharing in some common enjoyment begets a more friendly feeling toward others than sharing in the same kind of knowledge.

Not until art education is viewed in these broader aspects can the subject take its rightful place in public education. For not until the psychological conditions for the training of the child are comprehended can a method of instruction in art suitable to children be devised, and not until its applications in social life are comprehended can the object of art in education be understood.

It is not necessary to dwell upon the fact that this view of art education does not present the subject as in any way antagonistic to its applications to industry, or to other branches of education. In fact, the more the subject is studied from this larger point of view the more will

it be seen that its practical applications, both in industrial training and in general educational training, are greatly increased, because there is brought to its application in these directions the creative power of the pupils, enriched by the study of the beautiful, which is the life-giving principle in all industrial work, and the most subtle and refining force in all intellectual development and training.

With these points in mind, and in view of the wide introduction of drawing into the schools, a pertinent question arises here. Is the study coming into public education on the basis of art, or is it coming in on the basis of utility? If we look at the history of the movement for introducing drawing into the schools, which began about twenty years ago, we shall see that it started upon a purely utilitarian or industrial basis. The movement, in its inception, was but a reflection—in many respects a copy—of the movement which was initiated about a score of years earlier in England, and which has been promoted there almost solely for the benefit of the manufacturing interests of Great Britain. As the movement has developed in this country, however, it is to be observed that it has been steadily widening in character under the influences of educational thought and discussion. Experience has long made it apparent that drawing could not be maintained in the schools as a general study simply on the basis of its technical applications in industry. Consequently, the last ten years have shown important modifications of the instruction in the direction of bringing it into harmony with psychological principles. It was an important step in this direction when form study, or the study of objects, was made the starting point in the instruction. Then drawing took its place as one of the means of expressing ideas of form, and in many of our principal cities the method of instruction has been radically changed so as to make the study of form in models and objects the fundamental feature of the work. Under this arrangement the various kinds of drawing, such as free-hand drawing, mechanical drawing, perspective drawing, decorative drawing, are of secondary consideration, and are governed entirely by what the children have studied and by the ideas they have to express resulting therefrom.

That this change is in the right direction will not be questioned by anyone acquainted with the subject; but it will be a serious mistake to say that, because the method of teaching drawing has been changed so as to make it the expression of ideas derived from the study of objects, the problem of art education in the schools has been solved. In fact, it may be said that with this change of method the real problem confronts us from a new and broader aspect than when we were dealing with the subject simply from the standpoint of drawing. Having reached the stage where drawing is regarded as but a means for the expression of form ideas derived from the study of objects, the vital point in the instruction now turns upon this question: What kind of objects shall we give the children to study for the development

of the ideas to be expressed? It is not infrequently claimed that the interest of the child should be the guiding consideration here. That we should have regard for what shall attract and hold the attention of the pupil is not to be questioned; but it would be a great mistake to assume that this should be the only consideration.

If the love of the beautiful and the creation of the beautiful is the aim of the instruction, then it would seem that the objects given the pupils to study should be such as clearly present the characteristics of beauty. Now, some of the objects that most interest a child may be such as possess no distinctive features of beauty—may be such as appeal to his selfish instincts or feelings. I am sure we shall all agree that such objects should not be chosen. But it is said that leaves, plants, flowers, fruit interest children, and as beauty is found in the study of nature, natural forms should be given as the basis of the instruction. No one will dispute that in this art training children should be given every possible opportunity to study nature, but in the choice of natural forms great care should be exercised in selecting only such as present, distinctly, beauty of form. It should also be borne in mind that the study of nature for the purposes of art is a widely different thing from the study of nature for the purposes of science. In the scientific study of nature she is interrogated for her facts, and these facts may be found—indeed, often are found—in objects devoid of beauty. The facts, however, are none the less interesting from the scientific point of view. The scientific study of nature, therefore, is purely objective, and takes little or no account of the æsthetic elements which are involved in the observation of things from the standpoint of art.

In the artistic study of nature, however, the beautiful is the end sought; and the appreciation of the highest beauty in nature is realized only when it is perceived that the various objects in nature are fashioned upon certain type forms which express unity and purpose as the highest truths in nature, truths that transcend all material manifestations and witness the supreme, eternal power that lies back of, and gives life to, nature. The natural objects are very few that express this truth, this beauty of nature, in all their details. They become beautiful only as they are seen in their typical relations. It is one of the functions of art to present the objects of nature, not in their accidental, but in their typical relations; in other words, to interpret nature in her highest aspects, not simply to imitate her in her details. Hence the art study of nature becomes largely subjective, and is very different from the objective study for the purposes of science.

If this principle be conceded, the question arises, what are the typical forms that the study of nature for art purposes reveals as the supreme content of nature? They are very few, and they are very simple forms—namely, the sphere, the cube, the cylinder, the ellipsoid, the ovoid, the prism, the cone, and the pyramid. The wonderful

variety of forms which are observed in nature are but modifications of, or are derived from, these typical forms. These types, therefore, should be regarded as truths of form in nature just as distinctly as gravity is regarded as a truth of power in nature.

Now, if it be one of the functions of art to interpret beauty of form in nature, this beauty will be perceived in its highest aspects only as it is seen to be related to the highest truths of form in nature. Hence we are brought to the conclusion that as the typical forms referred to are the abstract embodiment of the highest truths of form in nature, they should be used in our elementary instruction as the best means of leading the children to discover and to realize the highest forms of beauty in the world of nature.

But the study of beauty in nature is only one phase of art education. The study of the beautiful in the creative works of man is quite as important a feature. The study of beauty of form in man's art work reveals the fact that it also is based upon the same typical forms that are found to be the embodiment of the highest beauty of form in nature, and it is the manner in which man has utilized these types with his creative imagination in the production of works for use and enjoyment that gives to his art works their highest character and significance. Thus we are brought to the final conclusion that for art training, which is to include the study of the beautiful in nature and the beautiful in art, we must adopt the type forms of the sphere, the cube, the cylinder, the ellipsoid, the ovoid, the prism, the cone, the pyramid, as the abstract representatives of all beauty, whether in nature or in art, growing out of the truths of form. The eternal power that speaks through nature's works invests these forms with life and gives to them their highest beauty. In art, man's imagination invests these forms with humanity, which is the very culmination of beauty in art. Beauty in nature and beauty in art are, therefore, in their ultimate analysis one, and rest upon the same unchanging truths of form.

If I rightly apprehend the instruction in form study and drawing that is now finding its way into the schools, it is based upon the distinct recognition of these type forms as the fundamental verities for the training of children to perceive beauty of form in nature and in art; and it is the aim of the instruction so to connect the study of these typical forms, with carefully selected natural forms and fine examples of art forms, that the children may be brought through the legitimate and happy exercise of their observing and creative powers under the influence of the beautiful as the highest truth of nature and of art. This is not the occasion for the presentation of the details involved in carrying out this important work. This task may be left to the many able directors of drawing, who, in several of our leading cities, are endeavoring to give to form study and drawing the broad character here indicated, and who are laboring against great obstacles arising from the general misconception of the subject which exists in the public mind

and in the minds of some who are directing the schools. It seems the proper place, however, for the consideration of a few points whereby the instruction in the schools may be made more efficient.

To this end one fact must be distinctly recognized as fundamental to any substantial and permanent success—that the instruction in the grades below the high school must be given by the regular class teachers. This is so obvious a fact in efficient school management as to need no argument. Following from this, however, are three very important points which I will venture to state:

First. A course of study should be prepared in which the orderly development of the subject through all the grades should be clearly presented. But few of the regular teachers have had any training in art worthy of the name. They need, therefore, to have it so presented that they may be able not only to become acquainted with the features to be taught in their respective grades, but also to see the unfolding of the subject through all the grades. Not until the class teachers are able to take this comprehensive view of the work, not until they see that the study must be recognized as an organic feature in the general course, can they be expected to take an interest in it.

Second. The instruction in this subject in the schools should be under the direction of special directors of art education. These directors should be broadly educated persons. It is not enough that they have received training in technical art work. They should also be familiar with educational methods; with the general school conditions that surround the teaching of art in the public schools; and, above all, they should be able to interpret the work in its principles and methods to the class teachers, as well as to criticise and supervise it.

Third. The schools need to be supplied with more and better objects for the children to study. The models of the type forms that are now being so generally introduced should be supplemented with casts of natural forms, artistically treated, so that the pupils in their individual study of natural forms may see proper specimens of the art rendering of nature, and also with reproductions of historical ornament, both in relief and in color, in order to afford opportunity for studying good examples of art work applied to the things of common life. In addition to these there should also be provided reproductions of choice vase forms from classic, renaissance, and oriental art. Man's realization of pure beauty of form and color has found one of its most pleasing modes of expression in fictile art, and as these vase forms can be shown to be developments under the influence of the feeling for beauty from the type forms we have been considering, and as they are full of historic associations, they will greatly interest the pupils, and can, therefore, be studied with much greater profit for purposes of object drawing than the miscellaneous objects, possessing no well-defined elements of beauty, that are too frequently placed before them.

With well-considered courses of instruction in art education, with

the schools supplied with suitable materials and objects of study, with proper directors in charge of the work, we should see, I believe, a real art development in this country unexampled in the world's history.

Reference has already been made to the want of art culture among our people. This is one of the noticeable facts connected with our social life, and yet the student of history sees that man's creations in art are among his highest achievements, and that they are identified with his highest moral and spiritual development. In the perspective of history it is the art creations of Athens and Rome and Florence and Venice, enshrining as they do some of the loftiest conceptions of the human mind, that make these cities immortal in the memory of man. As a people we are ignorant of the uplifting and ennobling influence of art; and yet we have in our public school system the grandest opportunity that was ever given to carry a love for the beautiful into every home, to make it the possession of every man and woman in the land. But we may look into the future with hope. With the growth of our national power and the development of our material resources, we are broadening our education, and thereby opening the way for a better, a nobler, a happier existence for the people. We are putting into the schools those studies and methods that will powerfully help in transforming the conditions upon which the progress, the order, and the stability of the State depend. The kindergarten recognizes the humanity of the child. The study of science recognizes the world of nature as a Divine storehouse, filled with exhaustless treasures for ministering to the wants of man. The industrial training recognizes labor as fundamental alike to the freedom and independence of the individual, and the power and prosperity of the nation. Art education recognizes the beautiful as not only the supreme truth in the material world, but as a part of the supreme truth in the moral world, and that so far as it enters into the human life it is a Divine influence that purifies the hearts and souls of men.

The love of the beautiful, therefore, should be one of the finest results of our public education, and when art instruction shall be so incorporated into the schools that its rich, benign influence shall permeate the life of the whole people, we may then write over the door of every American schoolhouse these inspiring words of Schiller:

Create the beautiful, and seeds are sown  
For God-like flowers to man as yet unknown.

## CHAPTER XVII.

### FACILITIES FOR THE UNIVERSITY EDUCATION OF WOMEN IN ENGLAND.

---

From notes, by MARTHA FOOTE CROW, Ph. D., *Assistant Professor of English Literature in the University of Chicago.*

---

#### WOMEN AT THE UNIVERSITY AT OXFORD.

##### I. INTRODUCTION.

It is not the intention to give here a full account of the university system. Many books have been written on this subject, treating of its historical and present features, and showing how the existing very complicated mass of regulations and arrangements has been gradually formed in the devious windings of the centuries. Even if an attempt should be made to display the intricacies of the system, a dismal failure would probably be the result—a failure to which less discredit would be attached if it were revealed that it is said at Oxford that no one dares pretend to understand the Oxford University system. To one coming from a land where in the fresh light of to-day everything is being made at first hand and where what is thought to be the very latest has a greater value than any old thing can possibly have, it seems strange to find the meaning of an odd custom or an unusual differentiation of subject in the schemes of study or a peculiar title for a department of work accounted for on the ground that it is thought to have its origin in monastic customs in the early days, or, it was so differentiated five hundred years ago, or, the schoolmen thought they got this queerness from Aristotle, and we do not like to change the word. With the distinct understanding that no attempt will be here made to give a full view of these bewildering details that have grown up through centuries of historic tradition, and have been modified in a hundred minute ways by the varying circumstances and needs of the different eras through which the institution has lived, and that it shall be considered a quite sufficient answer to any curious question to say, it is so because it always has been so, an answer that always pacifies the eloquence of flippant objectors to the existing state of things in classic English circles, a brief account of the main features only will be given; the sole object being kept in view that whatever may be useful to

women coming from the United States for purposes of study shall if possible be explained with sufficient fullness to prevent misunderstanding.

It is only a few years since women began to study at Oxford, and the movement was to some extent preceded by the establishment of "local examinations," held at different centers throughout the country. These were started first for boys, then girls were admitted to them; then a higher examination for women over 18 years of age was started. These examinations are conducted by a special board known as the delegacy for local examinations, and so the work at Oxford has developed and the regular university examinations have been opened to women. Everything connected with this part of the work, i. e., the examination of Oxford female students, whether by the degree examinations of the university or by the special examinations for women, has been in the hands of this delegacy. The opening out of the university examinations has always taken place in the form of permissions to the delegacy to use the university examinations in their examinations of women. Of course this is a mere form of words, but it means that the business of everything that concerns women's examinations is managed by this delegacy.

The other body that is concerned with the women students is the Oxford Association for the Education of Women (p. 803). This association arranges for the teaching of the women students, and by appointing on its council representatives from the women's colleges really confers a sort of informal license on these colleges.

Residence is provided for the students in three special halls, i. e., Somerville College, Lady Margaret Hall, and St. Hugh's Hall, and one under separate supervision.

## II. UNIVERSITY AND COLLEGE.

The word "university," as used in England, may have any one of several meanings. It may mean the whole body of instructors and students with all the institutions, by means of which they carry on the collective system of their work. But it may also mean the "body corporate" that, by its functions and its delegated committees, exercises jurisdiction over the whole, appoints professors and readers, gives degrees and sends up two members to the House of Commons.

The university has 11,000 members, 8,000 graduates and 3,000 undergraduates, the latter being, of course, in residence in the different colleges, as well as a small number of the former.

Not all graduates are members; only such as retain this position by the payment of certain yearly dues. And this is an important matter, as will be seen. The government of the university is vested in three bodies, the convocation, which consists of all members of the university who have taken the degree of master of arts or of doctor of medicine, civil law, or divinity, resident or nonresident; the congregation and

the hebdomadal council. All legislation is initiated by the latter, adopted, rejected, or amended in the congregation, rejected or adopted (but not amended) in the convocation. The convocation also confers honorary degrees and also degrees granted by decree or diploma, and transacts much other important business.

This plan attaches the graduates, wherever they may be scattered throughout the Kingdom and the world, very closely to the university. They have a vote and an influence and a share in its government.

A college is a corporate body quite distinct from but forming a part of the university itself, using the word in a restricted sense. The separate colleges are more or less subject to the laws and regulations made by the university, and they are intimately associated with the university. The great majority of the members of the university belong to the colleges, and all who belong to the various colleges at the same time are members of the university. There are two ways by which a man becomes a student-member of the university. He approaches this position through one of the colleges, whose duty it is to ascertain his fitness for admission to the university, or he may become a noncollegiate or unattached student, not belonging to any college or hall, and in this case placed under the care of the delegacy for noncollegiate students. To the separate colleges also, in the main, belong the scholarships and exhibitions which are offered to those who begin a university course.

These scholarships are very numerous and of great value. Many of them have been handed down from centuries ago. The pages that describe them and the conditions of admission to them in books of information for undergraduates take up a large part of the space. It is one of the most interesting features of the English university system, a feature that in the opinion of many ought to be copied in the young institutions of the New World. This element softens to some extent the feeling one must have when one realizes the enormous expense of the life of the student under present university conditions.

Every college has its own regulations for the admission of candidates, but there is a certain set of regulations common to all. The university makes the passing of certain examinations one of the conditions of the attainment of the B. A. degree, but the colleges may arrange for special ways of preparing for these examinations. The university imposes certain limits of time within which these examinations must be passed, but the separate colleges may make special laws also if they choose in regard to the time that shall be spent and the methods that shall be employed in preparing for the examinations. Some colleges will not accept as a candidate for admission anyone who does not intend to read for honors. It is not impossible also for persons who do not intend to proceed to the bachelor of arts degree to enter the university with a view to some special study. In such a case as this the entrance examination may be excused, provided sufficient evidence is given of the ability to prosecute those studies with advantage.

There are 21 colleges and each one is housed in a noble set of buildings, arranged about a quadrangle or charming lawn and garden placed in the center. There is always a beautiful chapel, filled with associations of the olden time, and the hall in which the students dine is usually of lofty proportions, and upon its walls are hung portraits of the founders and benefactors of the college. The hall is also used as a lecture room, and the long oak dining tables are converted for the time being into writing desks where the undergraduates sit and take notes of the lecture as it is pronounced from the lecture stand placed for the time being on the "high." The "high" is a raised platform at the upper end of the hall, upon which a table is placed for the use of the fellows at dinner. In every college there are a certain number of fellowships which are permanent, and which are occupied by men who either employ themselves in research study or instruct as tutors or lecturers; and in order that the institution shall be a college rather than simply a hall there must be attached to it a number of such instructors and lecturers, who act as advisers to undergraduates in regard to the lectures that they shall hear and the books that they shall read and who take charge of their written work, to which a great deal of importance is attached. There are other differences, but this seems to be the main distinction between a college and a hall; that a hall is a home for a certain number of students, but does not necessarily include a body of fellows and instructors.

The Women's Colleges at Oxford have no real splendor of building or tradition. They are but new institutions and come rather under the heading of halls, for they are mainly meant as places of residence. Properly, however, Somerville is a college, and Lady Margaret's and St. Hugh's are halls. These will be described in their proper place later on.

### III. THE ASSOCIATION FOR THE EDUCATION OF WOMEN.

The general arrangement of all matters in connection with the education of women in Oxford has been from the first under the care of one general association, now known as the Association for the Education of Women in Oxford. The first scheme for lectures and classes for women in Oxford was organized as early as 1865. These lectures were continued for some years. In 1873 another scheme of the kind was set on foot by a committee of ladies, Mrs. Max Müller being the treasurer, Mrs. Humphrey Ward and Mrs. Creighton, followed by Mrs. T. H. Green, the secretaries. Lectures were given by Professor Stubbs, now Bishop of Oxford, by Mrs. Fawcett, and by several Oxford tutors and lecturers, and classes were held for languages and mathematics.

The association, as it now exists, was founded in June, 1878. A committee was formed and the necessary funds were subscribed. The association was thus enabled to offer at once two scholarships.

In 1880 one college lecture was attended; at the present time students

are admitted, under certain regulations, to lectures in almost every college in Oxford.

In 1893 the work of the committee was readjusted, the name Council adopted, and a standing committee appointed termed the "Educational committee," consisting of the honorable secretary and treasurer of the association, and not less than three of its tutors or teachers, and the principals of the halls. In the same year the university for the first time gave official recognition to the association by the appointment of the dean of Christ Church to sit on its council as the representative of the hebdomadal council. The vice-chancellor also lent a room in the Clerenden Building for use as an office.

In the year 1884 the first university examinations were opened to women. These were honor moderations and the final schools of mathematics, science, and modern history. In 1886 responsions were opened, in 1890 the honor school of jurisprudence and the final examination for B. music, in 1893 the honor schools of theology and of oriental studies and the examination for D. music, and in 1894 the remaining examinations for the degree of B. A.

Thanks to the exertions of the association, every university examination for the degree of B. A. (pass or honor) is open to women, and almost every college admits them to lectures. It only remains for the university to grant the degree.

The number of association students that have attended lectures in Oxford is several hundred. A large number of these have obtained honors in the examinations, 51 having obtained a first class and 86 a record.

The association does not undertake to house students, halls being founded for the purpose. At present these are three in number, Somerville College, Lady Margaret Hall, and St. Hugh's Hall. The association has formulated conditions under which it will acknowledge new halls.

The association consists of ordinary members, honorary members, and student members.

All women who desire to attend lectures provided by the association, with a view to a definite course of study, must enter their names on the association register. Registered students pay 5s. per annum. After three such annual payments, all students who have obtained a complete certificate in the second public examination (pass or honors) of the university, or in the second examination for women (honors) of the delegates of local examinations, will be permanently registered as student members of the association with the right to vote at meetings.

Registered students must reside in one of the halls represented on the council, or with their parents or guardians, or in other places approved by the council. Students who are not in a hall are called home students and are under the care of a special subcommittee and of

a principal. Those who are not living with parents or guardians can be received into private family at a charge of from £1 5s. to £2 12s. 6d. a week. The cost of lodgings in Oxford is from 10s. a week upward; board may be reckoned at from 12s. a week. Students can also be received at St. Hilda's, Cowley House, and St. Kentigern's Hostel, The Crescent. The principal of the home students is Mrs. Johnson, who was for many years honorary secretary of the association. Miss Thorold Rogers, one of the tutors of Somerville, has now taken her place as honorary secretary.

The association procures permission to attend lectures which have not hitherto been open to women. As an extremely influential body, it is able to procure many advantages for its members which they could not otherwise obtain. It is hoped that eventually the association may be recognized as a sort of woman's board of the university. At present the formal recognition it receives is very slight, viz:

- (1) The appointment of one member of the hebdomadal council or the council of the association, and one on the council of Somerville College.
- (2) The privilege of using a room in a university building as the office of the association.

Informally, however, its influence is of great importance, since it includes among its honorary members some of the most influential members of the university, e. g., heads of houses and professors, and this is sufficient to insure its members the continuance of past favors, which before too long, it is hoped, will be transmuted into rights and privileges.

It would be quite possible for a woman to reside in Oxford for the purpose of study quite independent of the association. She might attend the university lectures which are open to the public, and in case she obtained the private permission of professors or lecturers to attend their more public courses of lectures, she might do so; but it would be better in all cases to be connected with the association, in order that the interests of the women students may be understood, and that no mistakes and misunderstandings may occur. It must be noted that the lectures are opened to association students, not to women in general; and when every facility is given by the association arrangements, and when the association is evidently in the hands of those who understand the situation and are applying the best judgment and the wisest policy to the present phase of development, women would do their own cause injury by attempting to work outside. In fact, it is very doubtful whether any such attempt would succeed.

Besides procuring its members admission to university and college lectures, the association provides certain courses itself, particularly in such subjects as modern languages, to which the university has only just begun to turn its attention.

Each course of association lectures is followed by a terminal examination, which students must attend unless specially exempted. This

examination does not count toward the final test, but is simply designed to gauge the progress of students. A student who was not employing her time profitably might be asked to withdraw.

The very great usefulness of such an association as this is evident, especially in this early stage when the university has not as yet in any way formally acknowledged the existence of the Women's College. It fuses into one the interests of all the women in the different halls and all others living in Oxford or elsewhere who are studying under the direction of Oxford instructors. It makes a point of comparison and a court of appeal. It brings the two bodies of instructors and instructed into proper touch without friction. It acts as a friendly go-between for the by no means won university and the women who are just outside the sacred inclosure. It sees that instruction is provided in every department in which women desire it. It provides the terminal examinations and sees that no one escapes this check upon the casual students. In fine, its object is to oil the wheels everywhere, and see that no loophole is left for the entrance of any objection.

All communications with regard to the association should be addressed to the honorable secretary, Miss Rogers, Association for the Education of Women, Clarendon Building, Broad street, Oxford.

#### IV. EXAMINATIONS.

It will be simplest here to state the examinations to be passed and the conditions to be observed by a man who wishes to take his degree at Oxford, and then to point out the slight points of difference in the regulations for women. All examinations that lead to a degree in arts (which at Oxford include law, theology, and science) are open to women. The medical examinations and schools, i. e., the examinations and schools of the medical department, are closed to them. We are therefore concerned here only with the various courses that lead to the degree of B. A., for the M. A. degree is not given for examination, but for a certain standing at the university.

The general regulation for the B. A. degree at Oxford is the following:

Any scholar in the faculty of arts may supplicate for the degree of bachelor in that faculty so soon as he shall have kept statutable residence and employed himself in the study of arts and in hearing lectures for twelve terms, and shall have passed three examinations, namely, responsions and the first and second public examinations, at the several times and subject to the conditions hereinafter set forth:

A responsion is the first of three examinations, and is really preliminary and may be passed before coming up. It is held four times in the year, three times in term, i. e., in March, June, and December, to enable intending students to pass before they enter on their university studies. A fee of £2 2s. is charged, with 10s. 6d. for an additional subject.

The examination is held in the New Schools, in High street, and usually occupies three days.

The subjects of examination are the following:

1. Arithmetic.
2. Either the elements of algebra (to simple equations with one or two unknown quantities) or the elements of geometry (Euclid, Books I and II).
3. Greek and Latin grammar.
4. Translation from English into Latin prose.
5. One Greek and one Latin book. The following portions of the undermentioned authors will be accepted:

Demosthenes: (1) *Philippics* and *Olynthiacs*, or (2) *De Corona*.

Euripides, any two of the following plays: *Hecuba*, *Medea*, *Alcestis*, *Bacchæ*.

Homer: (1) *Iliad*, 1-5 or 2-6; or (2) *Odyssey*, 7-11 or 8-12.

Plato: *Apology* and *Crito*.

Sophocles: *Antigone* and *Ajax*.

Xenophon: *Anabasis*, 1-4 or 2-5.

Cæsar: *De Bello Gallico*, 1-4.

Cicero: (1) *Philippics* 1, 2; or (2) *In Catilinam* 1-4, and *In Verrem Actio I*; or (3) *pro Murena* and *pro Lege Manilia*; or (4) *de Senectute* and *de Amicitia*.

Horace: (1) *Odes* 1-4; or (2) *Satires*; or (3) *Epistles*.

Livy: Books 21 and 22.

Virgil: (1) the *Bucolics*, with books 1-3 of the *Æneid*; or (2) the *Georgics*; or (3) the *Æneid*, books 1-5 or 2-6.

If any candidate desires to offer books or authors not contained in the above list, he is requested to give notice of his desire to do so at least four weeks before the day fixed for the commencement of the examination.

There are some special regulations for natives of India who may substitute Sanscrit or Arabic for Greek or Latin.

The following are typical examination papers in responsions:

#### ARITHMETIC.

Time allowed, three hours.

[The full working must be shown in all cases.]

1. What multiple is 8 tons 13 hundredweight 1 quarter 1 pound 8 ounces of 1 hundredweight 2 quarters 22 pounds 4 ounces?
2. Divide £9 17s. 8½d. between two persons so that one may have four times as much as the other.
3. Reduce to their simplest form:

$$(1) \frac{18577}{20000}; (2) \frac{5}{11} + \frac{11}{15} + \frac{14}{33} + \frac{3}{55}; (3) \frac{6\frac{2}{3} + 1\frac{3}{8} + 5\frac{5}{6} - 1\frac{1}{2}}{8\frac{7}{8} - 2\frac{5}{6}}$$

4. Express  $\frac{8}{11}$  as a decimal, and add together 8.27, 8.27, 8.27.
5. Find the number of yards in .72 of .2018 of 3 miles 4 furlongs 35 poles, and divide 8886.66 by .00037.
6. Find the least common multiple of 111, 4,329, and 273.
7. If a carrier receives £1 16s. 9d. for the carriage for 100 miles of 7 hundredweight 3 quarters 14 pounds, how much ought he to carry 150 miles for a guinea?
8. Find the cost of painting the four walls of a hall 41 feet 2 inches long, 32 feet 4 inches broad, and 21 feet high, at 10d. per square yard.

9. Find the amount after three years of £947 7s. 4d. when lent at  $4\frac{1}{8}$  per cent per annum simple interest.

10. Find the compound interest on £787 10s. for three years at  $3\frac{1}{2}$  per cent per annum.

11. A grocer mixes 12 pounds of tea at 1s. 6d. per pound with two pounds of tea at 2s. 8d. per pound. At what price must he sell the mixture in order that he may gain 25 per cent?

12. A man holds £5,000  $2\frac{1}{2}$  per cent stock. He sells out at 87 and invests the proceeds in 5 per cent stock at 150. Find the difference in his income.

13. Two pipes can fill a cistern in 3 and 4 hours respectively, and a waste-pipe can empty it in 6 hours. If the cistern is empty, and the pipes are all opened, in how many hours will the cistern be half full?

## GRAMMAR.

1. Decline throughout—*πούς, μήτηρ, ἰππεύς, σώφρων, τρεῖς*.

2. Give the gender and the genitive plural of—*obses, lapis, tussis, gigas, lepus*; and the genitive singular of—*idem, alter, unus, quisque, princeps, robur*.

3. Give the Greek and Latin for—whence? whither? nevertheless, even, thirteen, one thousand boys, four thousand dogs, twice.

4. Write down in full—

(1) Perf. Indic. of *λαμβάνω*. (2) 2d (strong) Aor. Ind. Mid. of *τίθημι*.

(3) Pt. (weak) Aor. Imperat. Act. of *ἐλαύνω*. (4) Imperf. Indic. Act. of *δηλόω*. (5) Plupf. Ind. Pass. of *πράσσω*. And give the principle parts of—*δεῖδω, οἶδα, αἰσθάνομαι, τιτρώσκω, ἄφαιρέω*.

5. Write down:—

(1) Second sing. pres. Imperat. of—*fio, morior, dico*.

(2) First sing. pres. Subj. active of—*do, volo, possum*.

(3) Second plur. fut. Indic. pass. of—*condo, impleo*.

(4) First sing. perf. Indic. act. of—*pereo, lavo, tero, pergo, discindo*.

(5) Supines of—*necto, pario, gero, servio, redimo*.

6. Translate into Latin:

(1) The more they have, the more they desire.

(2) How dare you say such a thing, when you know it is not true?

(3) Most of all the wall was many feet high, but at one place it was too low to be safe.

7. Translate into Greek:

(1) He refused to come into the city because of the plague (*νόσος*).

(2) I must see you before you go away.

(3) Some were silent, but others spoke well.

## FOR LATIN PROSE.

I. Translate into Latin prose:

It was the opinion of Marcian that war should be avoided as long as it is possible to preserve a secure and honorable peace, but it was likewise his opinion that peace can not be honorable and secure if the sovereign betrays a pusillanimous aversion to war. This temperate courage dictated his reply to the demands of Attila, who insolently pressed the payment of the annual tribute. The emperor signified to the barbarians that they must no longer insult the majesty of Rome by the mention of a tribute; that he was disposed to reward with becoming liberality the faithful friendship of his allies; but if they presumed to violate the public peace, they should feel that he possessed troops and arms and resolution to repel their attacks. The same language, even in the camp of the Huns, was used by his ambassador Apollonius, whose bold refusal to deliver the presents till he had been admitted to a personal interview, displayed a sense of dignity, and a contempt of danger, which Attila was not prepared to expect from the degenerate Romans.

## II. Translate into Oratio Recta:

(1) *Se quin clausas habuisse portas non separantem suas res a publicis, sed timentem qui fuis cædibus esset futurus: postquam animadverterit eas, qui liberassent patriam, servare etiam liberatem velle, non dubitasse quin et corpus suum et cætera omnia, quæ suæ tutelæ essent, patriæ restitueret.*

## (2) Into Oratio Obliqua:

*Pro tuo summo beneficio, Scipio, tibi gratias ago, quod mihi vitam incolumitatemque polliceris, et forsân uterer isto beneficio, si non ei summum scelus adjungeretur. Egone contra Cæsarem apud quem ordinem duxi, ejusque exercitum, pro ejus dignitate depugnavi, armatus stabo? Non ego istud facturus sum.*

Passages for translation were given in the various works of the Greek and Latin authors which might possibly be offered. From each work two or three passages were quoted, taken from different parts of the work. In each passage from two to four words were underscored with the direction that such words should be parsed and, in case of verbs, that the principal parts should be given.

There is also a special examination in additional subjects, which under certain circumstances enables candidates for a degree to omit the first public examination. Every such candidate is at liberty to offer himself for examination in an additional subject at responsions, either at the same examination at which he offers stated subjects or at another examination.

I. Every such candidate must offer one of the following subjects:

(1) A portion of a Greek or Latin historical or philosophical author.

He may offer any one of the following: Herodotus, Books 5, 6. Plato, *Apology* and *Meno*. Livy, Books 21 and 22. Tacitus, *Histories* 1-3.

(2) A portion of a French, German, or Italian historical or philosophical author.

He may offer any one of the following: Boissier, *Cicéron et ses amis* (omitting the *Essays on Atticus and Cælius*). Montesquieu, *Esprit des Lois*, Books 1-10. Ranke, *Savonarola und die florentinische Republik gegen Ende des fünfzehnten Jahrhunderts* (in *Historisch-biographische Studien*). Schiller, *Ueber naive und sentimentalische Dichtung*. Machiavelli, *Il Principe*. Dino Compagni, *Cronaca Fiorentina* (third edition, Turin, 1884, *Tipografia e Libreria Salesiana*).

(3) A portion of Bacon's *Novum Organum*. Book 1.

(4) The Elements of Logic, Deductive and Inductive.

As responsions is a preliminary examination, there are several substitutes for it.

All these substitutes are allowed for women also, and some others in addition. In particular there is a special first examination for women, the standard of which corresponds with that of responsions.

These are the regulations:

Every candidate must pass at the same examination in—

1. Any two of the following languages: (a) Latin, (b) Greek, (c) French or Italian, (d) German.

2. Arithmetic.

3. (a) Euclid, Books I and II, or (b) algebra to simple equations, including addition, subtraction, multiplication, division, greatest common measure, least common multiple, fractions, extraction of square root, and simple equations containing one or two unknown quantities, and problems producing such equations.

The books to be prepared are, in Latin—in 1894, either Cicero, *Pro Murena*, *Pro Lege Manilia* (*De Imperio Cn. Pompeii*), or Virgil, *Aen. I, II.* In 1895, either Sallust, *Cat. et Jugurth.*, or Virgil, *Aen. I, II.* In 1896, either Caesar, *Bell. Gall. I-IV*, or Horace, *Odes, I, II*, and in Greek—in 1894, either Euripides, *Hecuba*, and *Medea*, or Xenophon, *Anabasis I-IV.* In 1895, either Euripides, *Hecuba*, and *Medea*, or Xenophon, *Anabasis IV-VII.* In 1896, either Euripides, *Alcestis*, and *Medea*, or Xenophon, *Anabasis, IV-VII.*

No books are prescribed in the other languages. No candidate may offer more than two languages.

Candidates are examined in such manner as to test especially their knowledge of the grammar of the languages selected. Candidates must also translate a piece of English into Latin, French, or Italian, and German, as the case may be.

The following are accepted by the delegates as exempting from the first examination for women or responsions:

(a) The matriculation examination of the University of London; (b) the previous examination of the University of Cambridge; (c) the preliminary examination in arts of the Victoria University, if the candidate has passed in the same examination in two of the languages, Latin, Greek, French, German, and in mathematics; (d) the Cambridge higher local examinations, if the candidate has passed in Group C and in two of the five languages, Latin, Greek, French, German, Italian; (e) the Oxford senior local examinations, if the candidate has passed in the same examination in either algebra or Euclid and (with the special recommendation of the examiners) in two languages of Section C; (f) the examination for higher certificates of the Oxford and Cambridge Schools examination board, if the candidate has passed either in two subjects of Group I, and in elementary mathematics, or in one Greek and one Latin book, in Greek and Latin grammar, in translation from English into Latin, in arithmetic, and in either algebra or Euclid; (g) the final pass examination of the Royal University of Ireland or the honor examination at the end of the first, second, or third year, if the candidate has passed in two of the five languages, Latin, Greek, French, German, Italian, in arithmetic, and in either algebra or Euclid.

Graduates of any American university admitted to membership of the Association of Collegiate Alumnae (U. S. A.) are excused the first examination, if they become candidates for an honor certificate at the second examination.

A copy of the time table will be sent to each candidate about a fortnight before her examination. No papers will be sent on Monday morning.

#### THE FIRST PUBLIC EXAMINATION.

This examination, known usually as moderations (or Mods.), must be taken not earlier than the fourth term or later than the ninth term after matriculation. No candidate is admitted who has not passed responsions or a substitute.

It consists of:

I. An examination in Holy Scripture.

II. An examination of candidates not seeking honors.

III. An examination of candidates seeking honors in (a) Greek and Latin literature or (b) mathematics.

I. The examination in Holy Scripture consists of: (a) One of the

synoptic gospels, and the Gospel according to St. John; (b) either the subject-matter of the Acts of the Apostles or that of some portion of the Old Testament.

There are certain special exemptions from this examination.

II. Examination of those who do not seek honors (pass moderations).

The subjects are: (a) Three books at least, being portions of Greek and Latin authors of the best age, one Latin and two Greek or two Latin and one Greek, one of such books at least being some portion of a historical or a philosophical work. (b) Either logic or the elements of geometry and of algebra.

(a) The list of Latin and Greek books is as follows:

Greek: Herodotus, V, VI; Thucydides, VI, VII; Xenophon Memorabilia, I, II, IV; Plato, Apologia, Meno; Aristotle, Politics, I, III; Homer, Odyssey, VI-XII; Aristophanes, Acharnenses, Ranae; Demosthenes, De Corona.

Latin: Livy, XXI, XXII; Tacitus, Histories I-III; Sallust, Bellum Catilinarium and Jugurthinum; Cicero, either Pro Murena, Pro Milone, or Pro Roscio Amerino, Pro Milone; Terence, Andria, Phormio, Adelphi; Virgil, Æneid, I-VI; Horace, Sat. I, II; Epist. I, II; Juvenal (except Sat. II, VI, IX, XV, XVI).

(b) In mathematics the subjects are: Algebra, including quadratics, ratio, and proportion; geometry, including Euclid, Books III and IV.

In logic the subjects are: The elements of logic, deductive and inductive. These subjects may be studied in Fowler's Elements of Deductive Logic and the first five chapters of Fowler's Elements of Inductive Logic (omitting the sections on classification, nomenclature, and terminology, and the notes appended at the end of each chapter), or in Jevons's Elementary Lessons in Logic, or in any other works which cover the same ground.

III. Examination of those who seek honors (honor moderations).

(a) Classics:

Candidates are examined in the following subjects: Books, subjects, composition.

(1) Books. Translation of passages taken from Homer, Virgil, Demosthenes, and Cicero's Orations. (These are the four necessary books.) Three hours are allowed for each of the two papers set.

(2) Translation of passages from books other than these. Three hours.

(3) Portions of authors specially offered. Candidates are required to offer three books from the following list, not more than one from each part:

- (1) Æschylus, the Trilogy, or any four plays including the Agamemnon.
- (2) Sophocles, any three plays; or any two plays with the Agamemnon of Æschylus.
- (3) Euripides, any four of the following plays: Bacchæ, Hippolytus, Ion, Iphigenia in Tauris, Medea, Phœnisæ, Hecuba, Alcestis.
- (4) Aristophanes, any three of the following plays: Acharnenses, Aves, Equites, Nubes, Ranae, Vespæ.

- (2) Thucydides, any three consecutive books.
  - (3) Pindar, Olympian and Pythian odes.
  - (4) Theocritus.
  - (5) Plato, Republic, Books I-IV; or the Gorgias and Protagoras.
  - (1) Horace, Odes, Epodes, Carmen Sæculare, and Ars Poetica, with either the Satires or the Epistles.
  - (2) Juvenal (omitting Satires 2, 6, 9), with either Persius or one book of the Satires of Horace.
  - (3) Catullus (selections published by the Clarendon Press), with Propertius, Books I-III, or IV, V.
  - (1) Tacitus, Annals, I-IV, or the Histories.
  - (2) Livy, Books II-V.
  - (3) Plautus, any four of the following plays: Amphitruo, Aulularia, Captivi, Menæchmi, Miles Gloriosus, Mostellaria, Rudens, Trinummus.
  - (4) Terence.
  - (5) Lucretius, Books I, II, III, V.
  - (6) Cicero, Letters, Parts I and II of Watson's Selection, or De Oratore, Books I, II.
- Three hours allowed for the paper on each book.

There is also a general paper on grammar, literary criticism, and antiquities. Three hours.

One at least of the following:

- (1) The History of the Greek Drama, with Aristotle's Poetics (omitting cc. 20 and 25).
- (2) The History of Attic Oratory, with Jebb's Selections.
- (3) The History of Roman Poetry to the end of the Augustan Age, with Quintilian, De Instit. Orat., Book X.
- (4) The elements of Deductive Logic with either Magrath's Selections from the Organon, pars. 3-6; 22-33; 36-47; 50-53; 61-66; 68 and first paragraph of 69; 105-112; 118-127. (All these sections are to be understood as inclusive.) Or such portions of Inductive Logic as are contained in Mill's Logic, Bk. III, ch. i-iv, vi-viii, x-xii, and xx.
- (5) The elements of Comparative Philology as applied to the illustration of the Greek and Latin languages, with a special knowledge of either Greek or Latin philology.
- (6) The outlines of the history of Greek sculpture, B. C. 600-320, with the passages on the subject in Overbeck's Die Antiken Schriftquellen.

Three hours are allowed to the paper in each subject.

3. *Composition*.—All candidates will be examined in Latin prose composition.

Papers will also be set in Greek prose composition, and in Greek and Latin verse composition, but (1) the omission of either or both of the verse composition papers may be compensated for by a fourth book taken from the list in Section I, clause 3, or an additional subject taken from the list in Section II. When a candidate under this regulation offers four books he will be required to select one book from each of the four groups A, B, C, D. (2) The omission of Greek prose composition may be compensated for by an additional subject taken from the list in Section II.

Failure in or the omission of any one paper will not necessarily prevent a candidate from obtaining the highest honors.

The following texts will be used in this part of the examination :

|   |  |
|---|--|
| Homer. Dindorf (Teubner's series).                          | Catullus. Ellis.                             |
| Demosthenes. Dindorf, fourth edition, cur. Blass (Teubner). | Horace. Wickham.                             |
| Æschylus. Paley (Cambridge Texts).                          | Juvenal. Mayor (second edition).             |
| Sophocles. Campbell & Abbott, 1886.                         | Persius. Conington (third edition).          |
| Euripides. Paley (Cambridge Texts).                         | Propertius. Palmer.                          |
| Aristophanes. Merry (Clarendon Press Series).               | Plautus. Mostellaria. Sonnenschein.          |
| Theocritus. Zeigler (Freiburg, 1879).                       | Plautus. Aulularia. Götz & Löwe (Teubner).   |
| Pindar. Christ (Teubner).                                   | Plautus. Amphitruo. Götz & Löwe.             |
| Plato. Baiter & Orelli, fourth or fifth edition (Zurich).   | Plautus. Captivi. Sonnenschein.              |
| Thucydides. Bekker.   | Plautus. Menæchmi. W. Wagner.                |
| Virgil. Papillon and Haigh.                                 | Plautus. Miles Gloriosus. Götz & Löwe.       |
| Cicero (Orations). C. W. F. Müller (Teubner).               | Plautus. Rudens. Götz & Löwe.                |
| Cicero (Letters). Watson.                                   | Plautus. Trinummus. Ritschl (third edition). |
| Cicero (De Oratore). Wilkins.                               | Terence. Wagner.                             |
| Lucretius. Munro (third or fourth edition).                 | Livy. Madvig.                                |
|   | Tacitus. Halm.                               |
|   | Aristotle (Poetics). Vahlen.                 |
|   | Quintilian, Book X. Peterson.                |

(b) The examination for those who seek honors in mathematics includes—

1. Algebra and the theory of equations.
2. Trigonometry, plane and spherical.
3. Pure geometry: analytical geometry of two dimensions.
4. Differential and integral calculus, with applications to plane geometry, and to the geometry of solids and surfaces of revolution: differential equations.
5. The elements of mechanics of solids and fluids, to be treated without the aid of the differential or integral calculus.

The examination in Holy Scripture is held four times in the year, in March, June, October, and December; they pass examination twice—in June and December; honors in classics only once—in March; honors in mathematics twice—in June and December. The fees are £1 1s. for each part.

Women are admitted and examined on the same conditions as men except that—(a) There is a difference in the examinations that exempt them from responsions. (b) There is no rule about the length of residence required before entering for the examination.

#### THE SECOND PUBLIC EXAMINATION.

This examination is generally known as the final schools or by its slang name, "Greats." Here, too, candidates may seek a mere pass, or they may seek honors. The examinations for pass and honors are quite distinct.

As a rule before entering for the final schools, a candidate is expected to have passed responsions and moderations, but there are many exemptions from this rule. In particular, an additional subject taken

at responsions exempts candidates who take certain subjects on the final schools from moderations.

The regulations are too numerous and complicated to quote, but it is worth noting that even in the case of men the university does not always insist on the preliminary examinations. The difference in the case of women is that there is even more elasticity in the arrangement.

The regulations are the following:

(1) *For pass candidates.*—No candidate shall be admitted to any part of this school who has not either (1) obtained honors in the first public examination; or (2) satisfied the moderators in the examination of candidates not seeking honors; or (3) satisfied the moderators in mathematics and passed in an additional subject at responsions; or (4) satisfied the examiners in the preliminary examination of the honor school of jurisprudence and passed in an additional subject at responsions; or (5) satisfied the examiners in the preliminary examination in the honor school of natural science in two subjects and passed in an additional subject at responsions; or (6) passed the higher local examination in two languages in section A and either section D 1, 2, or section E 1.

(2) *For honors candidates.*—No candidate shall be admitted to any honor-school who has not passed either (1) responsions (stated subjects); or (2) the first examination for women (p. 3); or (3) an examination accepted by the delegates as exempting therefrom (p. 3); and no candidate shall be admitted to the honor school of natural science who has not fulfilled the conditions prescribed in *Statt. Tit. VI., Sect. 1. c. § 5, c. 7* (vide Examination statutes).

The following are the regulations for the pass school:

1. The subjects of examination for candidates who do not seek honors shall be arranged in four groups:

A. (1) Two books, either both Greek, or one Greek and one Latin, one of such books being some portion of a Greek philosophical work, and the other a portion of a Greek or Latin historian. (2) The whole or some portions of Greek and Roman history. Candidates will be required to show a knowledge of the political and descriptive geography of the period which they offer. (3) The elements of Sanskrit, including translation into the language and a portion of its literature. (4) The elements of Persian, including translation into the language and a portion of its literature.

B. (1) Either English history and a period or subject of English literature, or a period of modern European history or of Indian history with political and descriptive geography; together (in each case) with English composition. (2) The French language, including composition in the language, and a period of its literature. (3) The elements of political economy. (4) A branch of legal study. Among the alternatives under this head shall always be included one or more branches of Indian law. (5) The German language, including composition in the language, and a period of its literature.

C. (1) The elements of geometry, including geometrical trigonometry. (2) The elements of mechanics, solid and fluid, treated mathematically. (3) The subjects of the preliminary examination in mechanics and physics in the honor school of natural science. (4) The subjects of the preliminary examination in chemistry in the same school. (5) The subjects of the preliminary examination in animal physiology in the same school. (6) The subjects of the preliminary examination in animal morphology in the same school. (7) The subjects of the preliminary examination in botany in the same school.

D. The elements of religious knowledge, which shall always include—(a) Specified portions of the Old and New Testaments, some portion of the New Testament being always offered in the Greek text; (b) some portion of the Old Testament to be

studied in the Hebrew text; (c) one of the creeds with a specified portion of the thirty-nine articles agreed upon in the convocation holden at London in the year 1562; (d) a period of ecclesiastical history; (e) some apologetic treatise, or part thereof, to be fixed from time to time by the board of studies.

Candidates will be required to offer together at the same examination subject (a), and any two of the four other subjects.

2. The examination in C. (3), (4), (5), (6), and (7) shall be the same as the preliminary examination in the same subjects in the honor school of natural science, and shall be conducted by the same examiners.

3. Each candidate shall be examined in three of the above subjects, of which not more than two shall be taken from any one of the four groups, and of which one must be either A. (1) or A. (3) or A. (4), or B. (2) or B. (5), and the examination in the three subjects may be passed in separate terms.

*Regulations of the board of studies.*—The books and subjects which may be offered until further notice are:

#### IN GROUP A.

(1) The effect of the statute, cl. 1, p. 36, is that candidates must offer one book in each of the lists ( $\alpha$ ) and ( $\beta$ ).

$\alpha$ . Greek philosophical works: Plato, Republic I-IV; Aristotle, Ethics, Books I-IV (omitting chapter 6 of Book I), together with chapters 6-10 of Book X (from *Εἰρημένων δὲ* to the end of the Treatise; Politics, Books I, III, VII (following the old order of the books).

$\beta$ . Historians: Greek, Herodotus, VII, VIII; Latin, Livy, XXI-XXIII, Tacitus, Annals, I-III, Cæsar, De Bello Gallico, I-VII.

By the statute, clause 3 and clause 5, candidates may not offer the same books or, except in cases specially excepted by the board of studies, a portion of any of the authors in which they have passed in certain other examinations. The specially excepted cases are:

Candidates who have satisfied the moderators in Aristotle's Politics will be allowed to offer the prescribed portions of the Ethics in the final pass school, Group A. (1).

Candidates who have satisfied the masters of the schools, or the examiners in any examination giving exemption from responsions, or the moderators, or the examiners in the preliminary examination in the honor school of jurisprudence in any portion of Plato other than the Republic, will be allowed to offer the prescribed portion of the Republic in the final pass school, Group A. (1).

Candidates who have satisfied the examiners in the preliminary examination in the honor school of jurisprudence in any portion of the Politics of Aristotle will be allowed to offer in the final pass school, Group A. (1), the prescribed portions of the treatises which they did not offer in the preceding examination.

Papers in the pass school, Group A. (1), will be set from the following texts: Plato, Baiter and Orelli, fourth or fifth edition; Aristotle, Ethics, Bywater; Aristotle, Politics, Bekker; Herodotus, Stein; Livy, Madvig; Tacitus, Halm (Teubner); Cæsar, De Bello Gallico, Hoffmann (Vienna, 1888).

(2) The following portions of Greek and Roman history: Greek, from the legislation of Solon to the death of Epaminondas; Roman, from the establishment of the Republic to the death of Julius Cæsar. Candidates will be required to show a knowledge of the constitutional history, as well as of the political and descriptive geography, of these periods.

(3) Sanskrit, Manu I-VI, and Sakuntala.

(4) Persian, Gulistân, Books VII, VIII; Bûstân, Books I, II, and Sikandarnâma, Cantos XIII-XXIV.

#### IN GROUP B.

(1) Either one of two periods of English history, viz: (a) English history to 1603; (b) English history from 1509 to 1832; together with one of the following subjects

of literature: (a) Piers Ploughman, The Prologue, Passus i-vii; Chaucer, The Prologue, The Knight's Tale, The Nonne Prestes Tale; (b) Shakespeare, Julius Cæsar, Macbeth, Henry V, Twelfth Night, or one of the following periods of modern European history: (a) 1048-1254, to be read in Milman's History of Latin Christianity; (b) 1792-1848, to be read in Fyffe's Modern Europe, Vols. I and II. Candidates will be required, under the head of geography, to show a knowledge of the general principles of physical geography and of the geography of Europe (to the extent represented by Keith Johnston's Geography, Part III, pp. 101-260, ed. 1880), as well as of the political geography belonging to the period which they offer.

(2) French language and composition. (i) The following books are to be specially prepared: (α) Molière, *Le Tartuffe*. (β) Either Corneille, *Les Horaces*, or Racine, *Athalie*. (γ) De Tocqueville, *Ancien Régime*. (ii) A general acquaintance with the history of the literature of the age of Louis XIV will be required. Unseen passages of French will also be set for translation.

(3) The elements of political economy, to be read in Walker's Political Economy, and in the following portions of Adam Smith's *Wealth of Nations*, viz: Book I, chapters 1 to 11 (Part I) inclusive; Book II, chapters 1, 3, 4, 5; Book IV, chapters 1, 2, 7; Book V, chapter 2 (omitting article 4). Candidates will be expected to show an acquaintance with the chief facts of the economic condition of England at the present time.

(4) Either the principles of the English law of contracts, to be studied either in *The Principles of the English Law of Contract* by Sir W. R. Anson (Clarendon Press Series), or in Pollock's *Principles of Contracts in Law and Equity*, or in other works of similar character; or *The Institutes of Justinian*, omitting Book III, Titles 1 to 12, and Book IV, Titles 6 to 18; or *The Hindu Law of the Family, Family Property, and Inheritance*, which may be studied in the *Treatise on Hindu Law and Usage*, by J. D. Mayne.

(5) German language and composition. (i) The following books are to be specially prepared: (α) Schiller, *Die Jungfrau von Orleans*. (β) Either Goethe, *Hermann und Dorothea*, or Lessing, *Nathan der Weise*. (γ) Goethe, *Wahrheit und Dichtung*, Books I-IV. (ii) A general acquaintance with the history of the classical period of German literature (from Klopstock to Goethe) will be required. Unseen passages of German for translation will also be set.

#### IN GROUP C.

(1) The elements of plane geometry, including the doctrine of similar triangles, viz, Euclid, Books I-IV, with the definitions of Book V, and Book VI, Propositions 1-19.

The elements of trigonometry, including the trigonometrical ratios of the sum of two angles, the solution of plane triangles, the use of logarithms, and the mensuration of plane rectilinear figures.

(2) The elements of the mechanics of solid and fluid bodies, including the composition and resolution of forces, center of gravity, the simple machines and the application of virtual velocities to them, the laws of motion, the laws of falling bodies, the motion of projectiles, the pressure of fluids on surfaces, the equilibrium of floating bodies exclusive of the theory of stability, the methods of determining specific gravities, the laws of elastic fluids, simple hydrostatical and pneumatical machines.

(3) (4) (5) (6) (7). [The examination in these subjects is by Statt. VI. 1. C. § 2, cl. 2, p. 37, the same as the preliminary examination in the same subjects in the Honor School of Natural Science, viz: (3) Mechanics and physics (p. 53); (4) chemistry (p. 56); (5) animal physiology (p. 58); (6) animal morphology (p. 59); (7) botany (p. 60).]

<sup>1</sup>Change made in Michaelmas term, 1894. Before that time the prescribed plays were King John, Richard III, Hamlet, King Lear.

IN GROUP D.<sup>1</sup>

Candidates will be required to offer together at the same examination the subject (a) and any two of the four other subjects (b), (c), (d), (e).

- (a) Ezra and Nehemiah, with Haggai and Malachi, and The General Epistle of St. James and the First Epistle of St. Peter, to be studied in the original Greek. [N. B. The passages from the Old Testament will be set from the Revised Version, and those from the New Testament from the Oxford Text of 1881.]
- (b) Exodus, i-xi, to be studied in the original Hebrew.<sup>2</sup>
- (c) The Apostles' Creed, together with the Articles of Religion I-VIII.
- (d) The Beginnings of the English Church, from the coming of St. Augustine to the death of Theodore.
- (e) Either Butler's Analogy of Religion, Part II, chaps. i-vii, or G. P. Fisher: The Grounds of Theistic and Christian Belief, chaps. v, vi, vii, viii, ix, xi.

For the pass schools there is no limit of time. For honors no one may enter before the eleventh or after the seventeenth term, unless honors have been already obtained in some other school. As Oxford counts four terms to a year, this means that the final schools are usually taken at the end of the third or fourth year, more commonly in the fourth. A candidate who fails in the pass schools may try again; a candidate for honors may not.

The rules as to number of terms do not of course apply to women, as the university takes no notice of their residence and the delegacy merely inquires as to the preliminary examinations which have been passed.

## THE HONORS SCHOOLS.

There are eight distinct examinations, among which the candidate may choose one. These are: (1) *Literæ humaniores*, (2) mathematics, (3) natural science, (4) jurisprudence, (5) modern history, (6) theology, (7) oriental studies, (8) English language and literature.

As there is as yet no school for modern languages, the delegates provide a special one for women and they have also provided one hitherto in English, which will probably be discontinued.

I. *LITERÆ HUMANIORES*.

This is the school through which a great majority of Oxford men pass to the B. A. degree. The following is quoted from the preface of an account of it which appears in the Student's Handbook:

The school of *literæ humaniores*, as it is the oldest, so it is admitted on all hands to be the premier school in dignity and importance. It counts the largest number of candidates, it includes the greatest proportion of the ablest students, it covers the

<sup>1</sup>These regulations came into force in Michaelmas term, 1894.

<sup>2</sup>A question having arisen as to the nature of the examination in the portion of the Old Testament prescribed for study in Hebrew, in Group D (b), the Board of the Faculty of Theology are of opinion that it is set as a subject of linguistic study, and that only such knowledge of the subject-matter will be expected as is necessary for the interpretation of the text.

widest area of study, it makes probably the severest demands both upon examiner and candidate; it carries the most coveted distinction. The course of combined studies for this school is peculiar to Oxford. It is believed to confer a fine mental discipline and to favor a catholic and genuine culture. No one has claimed for it the manufacture of specialists; but most Oxford men, naturally proud of its tradition, have believed that there are few special studies for which it does not provide a sound preliminary training.

The examination includes the Greek and Latin languages, the histories of ancient Greece and Rome, logic and the outlines of moral and political philosophy.

The examination consists of two parts, stated subjects and special subjects. Papers or questions will always be given in stated subjects; special subjects are offered by the candidates themselves. The stated subjects consist of the following:

*Greek and Latin languages.*—All candidates will be expected to translate the Greek and Latin books offered by them for examination, and to translate passages from other books not specially offered.

Passages will also be set for translation into Greek and Latin prose.

*The histories of ancient Greece and Rome.*—All candidates are required to offer a period of Greek and a period of Roman history. The periods which may be offered are for the present—

In Greek history (1) to the end of the Peloponnesian war, (2) from B. C. 500 to the death of Philip. With the first of these periods candidates are recommended to offer Herodotus, Thucydides, Xenophon's Hellenics I, II. With the second, Herodotus V–LX, Thucydides, Xenophon's Hellenics, Demosthenes, Olynthiacs, Philippics, De Falsa Legatione, and De Corona.

In Roman history (1) from the beginning of the First Punic War to the Battle of Actium, (2) from the end of the Third Punic War to the accession of Vespasian. With the first of these periods candidates are recommended to offer Polybius (Strachan Davidson's Selections), Plutarch's Lives of the Gracchi, Cicero's Letters (Watson's Selection), Sallust, Cataline and Jugurtha, Tacitus, Annals I–VI. Candidates will be expected to show such a knowledge of classical geography and antiquities, and of the general history of Greece and Rome, as shall be necessary for the profitable study of the authors or periods which they offer.

Questions will be also set in the general results of the science of language, with especial reference to Greek and Latin.

*Logic and the outlines of moral and political philosophy.*—Under the head of logic, candidates are recommended to study the following subjects: The nature and origin of knowledge; the relation of language to thought; the elements of the logic of Aristotle, with the history of logic in Greece to the time of Aristotle, inclusive; the theory of syllogism; scientific method, including a comparison of the methods of different sciences, and the principles of historical evidence. Questions will be set in Bacon's *Novum Organum*, Book I and Book II, aphorisms 1–20.

Under the head of political philosophy, candidates are recommended to study the following subjects: The origin and growth of society; political institutions and forms of government, with especial reference to the history of Greece and Rome; the sphere and duties of government; the leading principles of political economy.

The following books are prescribed for the examination: (1) Plato's Republic; (2) Plato's Protagoras, Phædrus, Gorgias, Laws, III, VII, X; (3) Aristotle's Nicomachean Ethics; (4) Aristotle's Politics; (5) Locke on the Human Understanding, with either (a) Butler's Sermons or (b) Hume's Enquiry concerning the Principles of Morals; (6) The Transcendental *Æsthetik* and *Analytik* in Kant's *Kritik der reinen Vernunft*, and the *Grundlegung zur Metaphysik der Sitten*, with the two chapters of the *Kritik der praktischen Vernunft*, entitled severally *von den Grundsätzen* and *von den Triebfedern*, der reinen praktischen Vernunft. (The prescribed portions of Kant may be offered in an English translation as well as in the German. Candidates, if they offer a translation, are requested to state in their list of books which translation they offer.)

Out of this list candidates are recommended to offer one book of Plato and another of Aristotle. Those who offer more than these two books may either select from this list a third book, either ancient or modern, or offer one of the special subjects. But candidates who have offered Plato's Republic and Aristotle's Nicomachean Ethics may, if they think proper, offer a part of the politics without bringing up the whole.

Candidates will be expected to show such knowledge of the history of philosophy or of the history of the period of philosophy to which the philosophical authors offered by them, either as stated or as special subjects, belong, as shall be necessary for the profitable study of these authors.

Candidates may offer as a special subject any one of the following:

Greek and Latin languages:

- (1) The Greek dialects.
- (2) The lyric and elegiac poets of Greece (Bergk's *Poetæ Lyrici Græci*), with the corresponding period of the history of Greek literature.
- (3) Aristophanes, with special reference to the contemporary history of Athens.
- (4) The languages of ancient Italy, other than Latin.
- (5) Any six plays of Plautus and the plays of Terence, with a critical study of one play of each author.
- (6) The epic poets of the silver age of Latin, with a study of the Latinity of the period.
- (7) Textual criticism and palæography.
- (8) Comparative philology as illustrating the Greek and Latin languages.

Ancient history:

- (1) Assyrian and Babylonian history to 538 B. C., with Diodorus, Book II. (The fragments of Berosus should also be studied.)
- (2) Egyptian history to the Persian Conquest, with Herodotus II and Diodorus I. (The fragments of Manetho should also be studied).

## Ancient history—Continued.

- (3) The heroic age, with translations and explanations of passages from the Iliad and Odyssey.
- (4) The life and times of Alexander.
- (5) The Archæan League.
- (6) Ancient chronology.
- (7) The geography of the Peloponnese.
- (8) The history of Greek commerce and navigation.
- (9) Ancient sculpture, its history and subjects, in connection with the passages from ancient writers collected in Overbeck's *Antike Schriftquellen zur Geschichte der bildenden Künste*.
- (10) Ancient painting, its history and subjects, including the painting of vases.
- (11) The Greek deities, considered especially with reference to representations in ancient art.
- (12) The topography of Athens and Attica.
- (13) The regal period of Rome.
- (14) The constitutional history of Rome down to the war with Pyrrhus.
- (15) The period from 69 A. D. to the death of Vespasian.
- (16) The reigns of Trajan and Hadrian.
- (17) The reign of Diocletian.
- (18) The procedure in public and private trials under the Republic.
- (19) The municipal system in Italy and the Western Provinces from the enfranchisement of Italy to the death of Domitian.
- (20) The Roman military system from the commencement of the Punic wars to the death of Domitian.
- (21) The history of the Roman roads down to the accession of Trajan.
- (22) The architecture and topography of Rome so far as they illustrate the history of the Republic and early Empire.

## Philosophy:

- (1) Aristotle, *De Animâ*.
- (2) Aristotle, *Rhetoric*.
- (3) The history of Greek philosophy from Thales to Socrates, inclusive, with a special study of either Plato *Theætetus*, or Plato *Sophista*, or Aristotle *Metaphysics*, Book I.
- (4) The philosophy of the Stoics and Epicureans, with a special study of the *Discourses of Epictetus*, the *Meditations of Marcus Aurelius*, and the *Tenth Book of Diogenes Lærtius*.
- (5) The history of English moral philosophy from Hobbes to Hume inclusive, with a special study of the ethical works of the following authors: Hobbes, Hume, together with either Cudworth and Shaftesbury, or Clarke and Butler.
- (6) The philosophy of Hume and Berkeley, with a special study of Berkeley's *Principles of Human Knowledge and Alciphron*, and with Hume's *Enquiry concerning Human Understanding*.
- (7) The philosophy of Spinoza, with a special study of the *Ethics*.
- (8) Experimental psychology, with a special study of one or more treatises selected by the candidate.
- (9) Theories of the state and forms of government, with a special study of one or more treatises selected by the candidate.
- (10) Political economy, with one or more treatises to be selected by the candidate.

Candidates are recommended not to offer more than one special subject. It is not necessary for the attainment of the highest honors that any special subject should be offered.

Candidates intending to offer any subject not included in the preceding list must give notice of their intention six months before the examination, and obtain the approval of the board of the faculty.

Examination papers in the honor school of literæ humaniores will be set from the following texts:

|   |   |
|---|---|
| Plato. Baiter and Orelli (fourth or fifth edition). | Demosthenes. Dindorf, fourth edition, cur. Blass (Teubner). |
| Aristotle. Nicmachæan.                              | Livy. Madvig.   |
| Ethics. Bywater.                                    | Tacitus. Halm (Teubner).                                    |
| Aristotle. Other treatises. Bekker.                 | Xenophon. Dindorf.  |
| Thucydides. Bekker.                                 | Plutarch's Lives. Sintenis.                                 |
| Herodotus. Stein.                                   | Cicero. Watson.   |
| Polybius. Strachan Davidson.                        | Sallust. Jordan.  |

The examination takes places annually in June, and consists of two parts, paper work and viva voce.

The papers may be classed as follows:

*Subject papers.*—Logic (including questions in Aristotle, Bacon, the theory of knowledge, of the syllogism, etc.). Moral philosophy (including questions on the Republic and ethics, as well as on modern problems and interests). Ancient history and political philosophy (including questions on the relations between Greek and Roman history, and matters not specially covered by the next two papers enumerated, as well as on the four subjects above enumerated). Greek history, with reference to the period offered by the candidate. Roman history, with reference to the period offered by the candidate.

*Papers in prepared texts.*—Greek philosophy texts (usually Republic and Ethics). Greek history texts (usually Herodotus, Thucydides, Xenophon). Roman history texts (usually Plutarch, Sallust, Cicero, Tacitus).

*Scholarship papers.*—A passage of English prose for translation into Greek prose. A passage of English prose for translation into Latin prose. Unprepared passages of Greek and Latin for translation into English.

*Special subjects, or extra books.*—Candidates may offer special subjects or extra books in addition to the foregoing, or in compensation for some omission. Two papers are generally given in each special subject or book offered.

Three hours are allowed for each paper, and two papers are usually given for each day. The written examination thus lasts five and a half days, or thirty-three hours, and occupies the seventh week of the Trinity term. The viva voce takes place after an interval of about three weeks, in which the examiners are perusing the written work, and is public. Each candidate is taken separately in viva voce; some candidates are released after a very short examination, either because the papers are so poor that there is not much use in trying to improve them by further questions, or because the papers are so good that no further questions

are necessary. It is in cases of doubt that the questions are continued to an hour or even longer. Questions in philosophy, in history, and in the corresponding texts are asked.

## II. MATHEMATICS.

The subjects of examination are (1) pure mathematics, (2) mixed mathematics.

The following is the syllabus of the subjects in which candidates shall be examined:

*Pure mathematics.*—(1) Algebra; (2) trigonometry, plane and spherical; (3) geometry of two and three dimensions; (4) differential calculus; (5) integral calculus; (6) calculus of variations; (7) calculus of finite differences; (8) theory of chances.

*Mixed mathematics.*—(1) Mechanics of solid and fluid bodies; (2) optics, geometrical and physical; (3) astronomy.

The subjects of the papers in the examination will be as follows:

*Elementary papers.*—(1) Algebra and trigonometry; (2) geometry; (3) elementary differential and integral calculus, together with solid geometry; (4) elementary mechanics and hydrostatics; (5) optics and astronomy. The use of the differential and integral calculus to be allowed in papers 4 and 5.

*Advanced papers.*—(6, 7, 8) Pure mathematics; (9, 10, 11, 12) mixed mathematics; (13) problems in pure and mixed mathematics.

Thirteen papers are given in this examination, and they are upon the following subjects: Five elementary papers on algebra and trigonometry, geometry, differential integral calculus, together with solid geometry, elementary mechanics, hydrostatics, optics and astronomy, in which four subjects the differential and integral calculus is allowed. There are thirteen advanced papers on the subjects of pure and mixed mathematics.

## III. NATURAL SCIENCE.

The natural science school is divided into a number of coordinate divisions. These are (1) physics, (2) chemistry, (3) geology, (4) animal physiology, (5) animal morphology, (6) botany.

And the final honor examinations in these subjects are preceded by certain preliminary examinations, which correspond to some extent with the second public examination.

These preliminary examinations are given in (1) mechanics and physics, (2) chemistry, (3) animal physiology, (4) animal morphology, (5) botany.

(1) *Physics.*—In the preliminary examination candidates are examined in certain elementary portions of mechanics, sound, light, heat, magnetism, and electricity. Two papers are given. The questions do not involve mathematics beyond simple equations, and may as a rule be answered from an accurate knowledge of such books as Blaikie's *Dynamics* and Deschanel's *Ganot's Elements of Physics*. A practical examination in physics forms part of the preliminary, in which examination the final examination candidates are expected to show an accurate general knowledge of physics and are allowed to present

themselves, in addition, for a more detailed examination in one or more of the following branches of the subject: Acoustics, light, heat, electricity, and magnetism.

A practical examination is also given, which lasts for two days, and implies a knowledge of the most important physical measurements and methods of investigation.

The pass schools are held in June and December; the honors schools, as a rule, only in June. The fee for pass schools is £1 1s. for the first subject and 10s. 6d. for every other. For honors, £2 2s., except for mathematics, which is £1 11s. 6d.

After all these examinations the names of successful candidates are arranged in classes and publicly posted up. They are then published in the University Gazette, and the women's class list appears here too, as also in the university calendar.

Summing up the position of women, it may be roughly said that all the regulations published in the examination statutes (Clarendon Press) apply to them equally with men, except those that deal with residence.

These are the regulations for the special women's honor examinations:

No candidate shall be admitted to either part of the second examination for women (honors) who has not passed either (1) responsions (stated subjects), or (2) the first examination for women (p. 3), or (3) an examination accepted by the delegates as exempting therefrom.

#### ENGLISH.<sup>1</sup>

Papers will be set on the prescribed books, on English literature and its history to 1820, and on the philology and history of the English language. The following works must be specially studied:

|  |  |
|--|--|
| Wright, Gothic Primer (Clarendon Press).   | Piers the Plowman (Skeat).   |
| Beowulf, 1-2199.   | Spenser. Faery Queen, Book I.  |
| Sweet's Extracts from Orosius (Clarendon Press, 1885).   | Shakespeare. Macbeth; Julius Cæsar; The Tempest.   |
| Sweet's Selected Homilies of Ælfric (Clarendon Press, 1885).   | Bacon. Essays.   |
| Sweet's Anglo-Saxon Reader (Nos. ii, iii, xiii-xvi, xxi).  | Milton. Paradise Lost, I-IV; Areopagitica, Comus, Lycidas, Il Penseroso, L'Allegro, and the Sonnets. |
| Morris's Specimens of Early English, Part I, 2nd edition (Nos. v, vi, ix, xv-xix).                             | Dryden. Absalom and Achitophel, Part I.  |
| Morris and Skeat's Specimens of Early English, Part II, 2nd edition, (Nos. i, v, vii, ix-xi, xiii, xvi, xvii). | Addison. Selections, iv, v, vi (T. Arnold).  |
| Chaucer. The Prologue; The Man of Lawes Tale (Morris).   | Pope. Essay on Man.  |
|  | Johnson. Lives of Milton, Dryden, Pope.  |
|  | Burke. On Present Discontents.   |
|  | Wordsworth. Selections (Matthew Arnold).   |
|  | Byron. Selections (Matthew Arnold.)  |

<sup>1</sup> The examination in this subject will probably be discontinued after the year 1895, as it is expected that the first examination in the honor school of English language and literature will be held in 1896.

## FRENCH, GERMAN, ITALIAN, AND SPANISH.

Candidates must offer Part I of two languages and Part II of one of them.

In each Part I the examination will consist of composition, of papers on the prescribed books, and of unprepared passages for translation into English.

In each Part II papers will be set on the prescribed books, on the history of the literature, and on the philology and grammar of the language.

## FRENCH.

*Part I.*

Molière. *Le Misanthrope*; *Les Femmes Savantes*; *Les Précieuses Ridicules*.  
 Corneille. *Le Cid*.  
 Racine. *Athalie*; *Les Plaideurs*.  
 Voltaire. *Mérope*.  
 Victor Hugo. *Les Travailleurs de la Mer*; *Hernani*; *Légende des Siècles*, §§ i-xxx (édition définitive).

(Editors' names are given in parenthesis.)

*Part II.*

Alexis. (G. Paris.)  
*La Chanson de Roland*. (Stengel with Gautier.)  
*Le Roman de Rou*, Part III, ll. 7338-8998. (Andresen.)  
*Le Chevalier au Lion*. (W. L. Holland.)  
*Aucassin et Nicolette*. (Suchier.)  
*Le Roman de la Rose* (Extract in Bartsch and Horning).  
*Joinville, Vie de S. Louis*. (N. de Wailly.)  
*Satire Ménippée*. (Ch. Read.)

## ITALIAN.

*Part I.*

Dante. *Inferno*.  
 Tasso. *Gerusalemme Liberata*, 1, 2, 3.  
 Alfieri. *Congiura dei Pazzi*.  
 Gherardi del Testa. *Le Coscienze elastiche*. (Vockeradt.)  
 Manzoni. *Poesie*.  
 Leopardi. *Pensieri, Operette Morali*. (Ranieri.)

## GERMAN.

*Part I.*

Lessing. *Nathan der Weise*; *Laokoon*.  
 Goethe. *Faust* (Part I); *Iphigenie*; *Wahrheit und Dichtung* [Parts I and II (books i-x)].  
 Schiller. *Wallenstein* (the whole); *Wilhelm Tell*.

*Part II.*

Wright. *Gothic Primer* (Clarendon Press.)  
 Braune. *Althochdeutsches Lesebuch*: pages 8-17; 40-49; 53-57; 76-153.  
*Nibelungenlied*. (Bartsch.)  
 Wolfram von Eschenbach. *Parzival*, book iii. (Bartsch.)  
 Hartmann von Aue. *Iwein* [ll. 2971-3702]. (Bech.)  
 Hartmann von Aue. *Der arme Heinrich*. (Paul.)  
 Wernher der Gärtner. *Meier Helmbrecht*. (Lambel.)  
 Bartsch. *Deutsche Liederdichter des zwölften bis vierzehnten Jahrhunderts*; I-VIII; XIV-XV; XXI-XXII; XXV; XXXIII.

## SPANISH.

*Part I.*

\*Cervantes. *Don Quijote*, Part I; *La Gitanilla*; *La Española Inglesa*; *Coloquio de los Perros*.  
 \*Calderón. *Mágico Prodigioso*; *Alcalde de Zalamea*.  
 \*Solís. *Historia de la Conquista de Méjico*.  
 Cánovas del Castillo. *El Solitario y su Tiempo*.  
 Juan Valera. *Estudios*.

## Part II.

{ Giocoma da Verona. De Jerusalem  
 Celesti et gaudio sanctorum.  
 S. Francesco d'Assisi. Laude.  
 Brunetto Latini. Tesoretto, prologue.  
 { Giacomini Pugliese da Prato. Poesie.  
 Selections.  
 Folgore de San Geminiano. Gli mese;  
 la settimana.  
 { (Ulrich, Lesebuch, and Nannucci.)  
 Dante. Vita Nuova.  
 Villani. Cronica, Bks. 6, 7, 8. (Du-  
 rando.)  
 Petrarca. Trionfi.  
 Michel Angelo. Sonetti (pub. by Bar-  
 bera).  
 Vasari. Lives of Leonardo da Vinci,  
 Michel Angelo.

## Part II.

\* Poema del Cid. (Sanchez or Volmül-  
 ler.)  
 \* Don Juan Manuel. El Conde Lucanor.  
 (Gayangos.)  
 \* Romancero del Cid. (Michaelis, pub.  
 by Brockhaus.)  
 \* Ámadis de Gaula, Bk. I, and Discurso  
 Preliminar. (Gayangos.)  
 \* Santa Teresa. Libro de su Vida. (La  
 Fuente.)  
 \* Garcilaso de la Vega. Églogas. (de  
 Castro.)  
 Guillén de Castro. Mocedades del Cid.  
 (Merimée.)  
 Books marked \* may be found in the  
*Biblioteca de Autores Españoles*. (Ri-  
 vadeneyra, Madrid.)

A candidate may offer Part I of two languages and Part II of one language in two consecutive years. Her performance in the two examinations will be considered by the examiners in determining her place in the class list.

A viva voce examination in these modern languages for such as desire it will be held in Oxford. It will comprise writing from dictation, reading aloud, and conversation. Candidates who satisfy the examiners in this portion of the examination, as well as in that conducted on paper, will have a special note to that effect added to their certificates.

Candidates who pass in this section may, on a future occasion, offer the other languages of the section.

## V. METHODS OF STUDY.

At Oxford the teaching is partly provided by the university and partly by the colleges. There are university lectures given by professors and readers and tutors, and collegiate lectures provided by agreement among the different colleges, in such a way that the instruction shall not overlap. These are given by college tutors and lecturers. There are college lectures given for members of one college only, and, lastly, there are private "coaches" who give special instruction privately. This is sometimes required by backward students who need help to enable them to keep up with others, but perhaps more often for forward students who want to pass on more quickly and be guided in their advanced studies.

A course of lectures usually consists of one, two, or, most commonly, three lectures a week, and the delivery of a lecture occupies a little less than one hour. The favorite hours for lectures are at 10, 11, and 12, but sometimes they are given later in the day.

A very large number of university and college lectures are open to women; in fact, it is very rarely that they are refused admittance. Besides the university lectures, the Association for the Education of Women provides lectures that are not provided by the university, notably in modern languages.

Appended is the list of (I) association lectures and (II) university and college lectures open to women. It will be seen that the list is a long one and that instruction in every subject required is thus supplied.

*Association for the Education of Women in Oxford, Lent term, 1895.*

## I.—ASSOCIATION LECTURES (see A p. 835).

| Subject and term's work.   | Stand-<br>ard. | Lecturer.                   | Time.   | Course be-<br>gins— | Fee.    |

Students may obtain leave to attend lectures marked \* without doing papers.

a At 4 Norham Gardens.

b At Somerville College.

c At 2 Wellington Square.

d M. at 6, at 12 St. Margaret's road.

e Tickets for Mr. Sidgwick's lecture (1s. each) to be obtained at the office, Clarendon Building.

II.—UNIVERSITY AND COLLEGE LECTURES OPEN TO STUDENTS OF THE  
ASSOCIATION (see B p. 835).

| Subject and term's work.   | Lecturer.  | Time.                | Place.                       | Course be-<br>gins— |
|--|--|----------------------|------------------------------|---------------------|
| <b>Theology:</b>   |  |                      |                              |                     |

(A) *Association lectures*.—Examinations: Each course is followed by a terminal examination, which students are expected to attend unless specially exempted.

Students may obtain leave to attend lectures marked \* without being examined. Time and place, etc.: All the courses are given in the lecture rooms, Alfred street, St. Giles'. They are open to all students who have obtained leave to attend through the honorable secretary, Miss Rogers.

(B) *University and college lectures*.—Lectures marked † are public. For the rest, leave must be obtained through the honorable secretary, Miss Rogers, and can in most cases only be given to students who are reading for honors and who have passed the first examination for women. For Professor Napier's and Professor Burrows's lectures leave can be obtained from the professors or through Miss Rogers. (For Mr. Mackinder's lectures, see "Fees.")

N. B.—No students whose names have not been given in to the lady secretary shall be allowed to attend lectures.

*Fees for university and college lectures.*

|   | £ | s. | d. |
|---|---|----|----|
| Professor Turner. ....  | 0 | 5  | 0  |
| Professor Clifton (for those attending the class for the first time).....             | 1 | 0  | 0  |
| Physiology, extra fee for the first term of a course. ....                            | 1 | 0  | 0  |
| Professor Lankester and Professor Vines (for students not doing practical work). .... | 1 | 0  | 0  |
| Mr. Mackinder (for all who are not registered students of the association).....       | 0 | 10 | 0  |
| Mathematical lectures, where not otherwise stated. ....                               | 1 | 2  | 6  |
| Other courses (one day a week). ....  | 0 | 12 | 6  |
| Other courses (two days a week). ....   | 1 | 2  | 6  |
| Other courses (three days a week). ....   | 1 | 12 | 6  |
| Other courses (four days a week). ....  | 2 | 2  | 6  |

All fees, lectures and tutorial, to be paid to Mrs. Poole at the office of the association. N. B.—Any day of the sixth week of term during office hours. Checks to be made payable to Mrs. R. Poole.

Fees, whether for association or college lectures, which amount to more than £5 5s. and less than £6 6s. will be reduced to £5 5s., and where they amount to £6 6s. and over, 1 guinea will be remitted.

Office, Clarendon Building, Oxford, open 11 to 1 every day during term.

The office will be open between 11 a. m. and 1 p. m. from Monday, January 14, till the end of term. All business communications should be addressed there to the honorable secretary, Miss Rogers, who will be at the office on Saturday, January 19, and Monday, January 21, from 11 to 1, and on every other morning in term from 12.15 to 1.

Students must attend personally for entry in the general register between 12.15 and 1 on some day during the first fortnight of term. The written permission of the principal is required before any name can be entered. The registration fee is 5s. annually.

Mrs. Johnson, principal of the home students, will be at home, 8 Merton street, to see students on Saturday morning, January 19, and any morning in the first week of term, between 10 and 11; after the first week, by appointment.

The secretary of the delegacy of local examinations requests that applications for entry forms from a resident student be made, in term time, through the principal of the hall or body to which she belongs. Each entry form must be countersigned by the principal before it is sent in.

*Correspondence system.*—For particulars apply to the honorable secretary, A. E. W. Office, Clarendon Building, Oxford.

*Teachers' training system.*—A system of practical and theoretic instruction has been arranged for those who are going to make teaching a profession. The secretaries are glad to receive the names of any wishing to avail themselves of such instruction. The work includes teaching in a school twice a week for two terms out of the three. The fees are arranged according to the work done. Students must have passed the Oxford first examination for women or some equivalent examination.

A. SIDGWICK,  
A. M. A. H. ROGERS,  
*Honorable Secretaries.*  
E. M. VENABLES,  
*Assistant Secretary.*

Tutorial help and advice to students forms an essential part of the Oxford system of teaching. This can be obtained in any subject required from the tutors of the association, who direct and advise students during their university course. This is the list of association tutors:

#### TUTORS, LECTURERS, AND TEACHERS OF THE ASSOCIATION.

*Literæ humaniores.*—W. H. Hadow, M. A., tutor.

*Latin and Greek languages and literature.*—Miss Rogers, A. E. Haigh, M. A., Miss Sellar, and Miss Hayllar, tutors and lecturers; A. Sidgwick, M. A., and F. J. Lys, M. A., lecturers.

*Mathematics and physics.*—H. T. Gerrans, M. A., tutor and lecturer; Miss Pearson, lecturer.

*Natural science.*—D. H. Nagel, M. A., and Miss Kirkaldy, tutors.

*Modern history.*—J. A. R. Marriott, M. A., tutor and lecturer; Miss Melhuish (B. A., Victoria), G. N. Richardson, M. A., and G. H. Wakeling, M. A., tutors; Mrs. Marriott, teacher.

*English.*—Miss Lea, tutor and lecturer; O. M. Edwards, M. A., lecturer.

*Modern languages.*—Miss Wardale (Ph. D., Zürich), Miss A. M. Todd, and Miss Pope, tutors and lecturers; J. Bué, M. A., J. Wright, M. A., F. H. Peters, M. A., and M. Winternitz (Ph. D., Vienna), lecturers.

These are the regulations concerning tutors of the Association for the Education of Women:

1. Every student reading for an honor or pass school shall be assigned to a tutor on commencing her work, and remain under his or her general advice and direction until her examination.

2. The appointment of tutors or other teachers to take tutorial control shall be made by the association council, on the recommendation of the educational committee. The assignment of students to tutors shall be made by the educational committee; and a change of tutor shall only be made at the end of a term.

3. Tutors shall be consulted about the preparation of the terminal lecture list. They shall also advise as to the choice of their pupils' lectures, and the selection of teachers in subjects in which they do not teach themselves. No student shall be admitted to any association class or lecture (except such as are asterisked on the list) without the recommendation of one of the tutors in the school for which the lecture is provided. No change in a student's work shall be made without the knowledge of her tutor.

4. Tutors' recommendations as to individual students' work shall be communicated to the educational committee through the principals. Arrangements as to tutors and lecturers shall be made through the lady secretary.

5. Tutors shall, at the end of each term, send a report to the lady secretary, who shall forward it at once to the students' principal. Tutors shall be entitled to see all lecturers' and teachers' reports on their pupils before sending in their own.

6. A tutor who is responsible for a student's honor work, but is not actually teaching her, shall be entitled to receive a fee of 10s. per term.

In the case of the association lectures, weekly essays or compositions form part of the work.

#### VI. POSITION OF WOMEN.

The position of women in the University of Oxford can scarcely be called precarious, since the social relations are so thoroughly established, and the intercommunication of officers of the board that provides for women's examinations and the officers of the university is so complete; yet, on the other hand, it is a friendly rather than a formal relation. All the formal recognition given to women students by the university is this:

(1) The hebdomadal council of the university appoints one member of the council of the Association for Education of Women.

(2) The same body appoints one member on the council of Somerville College.

(3) The authorities have given a room in the university official buildings for the office of the association.

Otherwise the university has no official knowledge of the existence of the women.

Men students are subject to certain regulations. They matriculate, reside for a certain number of terms, attend certain lectures, take examinations in a certain order, receive degrees, and enjoy certain privileges as graduate members of the university. None of these arrangements are enforced for women by the university. All it does is to grant power to the delegacy of local examinations to use the university examinations in examining women. This is the legal fiction, but the result is that women may take any examination provided by the university for men. Their names are placed in a class list arranged exactly like that of the men, and their position in that list as compared with the men can be seen at a glance. In fact, this list is published in the University Calendar after that of the men, and also, by statute, in the University Gazette.

As regards residence, the university lays down no rule for women, and the delegacy does not inquire into the matter. Consequently, women may reside for a short or a long period, or, if they prefer it, not at all. On one occasion two ladies from Cambridge, who had won first classes in the mathematical tripos (Part I), wishing to test the standard of the Oxford final schools, which represent four years of study, as compared with that of the tripos, Part I (which represents three years), went to Oxford almost directly after their Cambridge examination, entered the honor schools, and obtained, respectively, a first and second class.

Students who belong to one of the halls and registered home students

reside for terms which are the same as those kept by members of the university, but they are not obliged to take the examinations at certain fixed intervals. All that the delegacy expects is certain specified preliminary examinations in two languages and elementary mathematics; those who are graduates of colleges included in the Association of Collegiate Alumnae, United States of America, are admitted without further conditions to the honor examinations. Women are allowed a larger choice of preliminary examinations than men, and they may, if they please, proceed at once to the final honor schools (senior public examination), entirely omitting moderations (the first public examination), or they may spend all their time working for moderations only. This plan has its advantages in regard to its greater freedom, but as long as it continues a woman will not obtain the same prestige as a man for her work, but will be regarded as having slipped in by a back door, leaving out some essential part of the work. There is much to be said on both sides; many people in Oxford value the freedom, while others consider the existing state of things a serious obstacle in the way of recognition by the university.

As regards lectures, tutorial help, etc., women have little or nothing to desire.

The university grants women neither degrees nor certificates. The delegacy, however, grants a certificate, and in the case of the honor schools the class obtained is indicated.

As women do not graduate, they have no recognition from the university when their time of study is ended. However, their position as student members of the association helps to keep up their interest in Oxford, and gives them a vote on important matters relating to the education of women.

That the present state of things is thoroughly satisfactory no one would probably maintain. There is a strong feeling growing up in favor of asking something more from the university. Before that can be done it will probably be necessary to introduce a little more method in the women's courses, order of examinations, etc. What the next step will be it is impossible as yet to say, for the matter is just now under discussion. The degree is now granted to women by London, Victoria, Wales, and all the Scotch universities, and the Royal University of Ireland, as well as by the colonial universities. Women have already been hampered in attempts to obtain positions in the colonies (and sometimes even in England) by lack of the degree. What is needed now is to bring home to the old universities the fact that women do suffer from their disabilities, and sooner or later they too will yield the right to wear the title as generously as they have given the substantial benefit of teaching and examination.

The reasons why a strong feeling has been growing up among the friends of women's education at Oxford that the present state of things was unsatisfactory are (1) because of the want of any fixed curriculum,

which tended to encourage scrappy and unsystematic work; (2) because the women who had gone through the full course did not obtain any adequate acknowledgment in the form of recognition and a degree. In consequence, the Association for the Education of Women in Oxford called a meeting in the new schools on May 4, 1895, at which the following resolutions were carried:

(1) That it is desirable that women students who have complied with the conditions as regards residence and examination should be admitted to the B. A. degree, and that a university diploma recording their residence and qualifications should be granted to women students who have resided at least three years, have passed a preliminary and an intermediate examination, and have obtained a class in any honor examination recognized by the university.

Carried by 115 to 26.

(2) That this meeting approves of application being now made to the university for the admission of duly qualified women to the B. A. degree.

Carried by 85 to 3.

As a result of these resolutions, a petition embodying the demands of resolution (1) was circulated among members of congregation (which is composed of M. A.'s resident at Oxford). In order fully to ascertain public opinion, the wording was as follows:

We, the undersigned members of congregation, respectfully petition the hebdomadal council to bring before the university some scheme whereby resident women students may receive due recognition.

I. By conferring upon those women students who have complied with all the conditions (of residence and examination) required of men for the B. A. degree, either (a) the B. A. degree, or (b) a university diploma stating their residence and qualifications, and that they have fulfilled the above conditions; and

II. By the grant of a university diploma or certificate, stating their residence and qualifications, to those women students who have resided at least three years, have passed a preliminary and an intermediate examination, and have obtained a class in any honor examination recognized in the university.

I (a) received 123 signatures; I (b), 24.

As a result of the petition, the hebdomadal council appointed a committee to go into the whole matter. This committee decided to take the evidence of experts on the following points:

(1) Whether the exclusion from the B. A. degree has been found to injure the professional prospects of women engaged in education; instances within experience of witness to be specified.

(2) Whether the admission of women to the B. A. degree would be likely, and if so, in what way, to injuriously affect the education of women.

Under these headings evidence is now being collected, and will be received by the committee in October. After hearing evidence, it is probable that the committee will report to the hebdomadal council, and, should the report be favorable, the council will probably take further steps in the matter.

It is worth noting that among those who signed I (a) of the petition are the master of Baliol, the principal of Brasenose, the principal of Jesus, Professors Burden, Sanderson, Wilson, Dicey, Elliott, Green,

Teggs, Müller, Poulter, Wallace, Wernghe, and York Powell, besides many other influential members of the university.

Such is the status quo in September, 1895.

#### VII. SOMERVILLE COLLEGE.

Somerville College and Lady Margaret Hall were opened on the same day, but as Somerville is the larger of the two it may appropriately be considered first. It was named, as need not be said, from Mrs. Mary Somerville, who was so great an honor to her sex, and who was the source of actual contributions to science. A copy of Flaxman's bust of her adorns the hall of each building, and it is proudly related that she was not only the first woman admitted to the Royal Society but also that she was an excellent housekeeper and fine needlewoman.

Somerville was originally started as a hall of residence. It was, however, incorporated as a college, and in 1894 assumed this title, with a view to improving its educational status.

The situation of the grounds chosen for this hall is convenient. Moving from Carfax, the intersection of the two main streets of the city, to the north, not more than a five-minutes walk leads one to the unpretentious gateway, which must be known in order to discover it, for no one would suspect that beyond its modest arch lies the avenue leading to the beautiful grounds of Somerville. The buildings are placed in a garden covering more than 3 acres, which is delightfully wooded and with plenty of room for tennis grounds and other amusements, and full of quiet retreats in which the student may seek for solitary studying hours or where groups of them may entertain their friends in cosy outdoor afternoon teas. The buildings consist of the old hall, originally a large dwelling house, with additions and the West buildings, which were put up several years after the original building was first opened. The new parts are in the Jacobian style, and each of the buildings is complete in itself, with its own dining and drawing rooms, library and offices, so that there are really two centers of home life in the place. There are also several cottages opening upon the grounds, which are used for the accommodation of students, the young ladies living in them going to one of the other buildings for their meals and for their social relations. About 65 students can be accommodated in the whole place, but as this number is divided into two home centers, many of the evils resulting in the conditions incident to life in large and crowded halls are much lessened, if they are not completely done away with.

The drawing-room in the old hall is a large and comfortable room, with a delightful aspect upon the garden, and with a large window door from which one steps directly upon the lawn. The ever-present fireplace is an attractive feature, comfortable sleepy-hollow chairs inviting to its warmth in winter. The walls are lined with beautiful pictures, Watts and Burne-Jones, according to the fashion of the time,

being represented; and some beautiful gifts by Mr. Ruskin are also among the number. A series of beautiful photographs of those Italian ladies that were lecturers and "dottorette" in the Italian university appropriately adorn one side of the room. A large portrait of the first principal of the hall hangs over the fireplace.

The library is on the second floor. It contains about 3,000 volumes, and is a sort of common room for the students, containing magazines and the newspapers, which the English girl does not fail daily to read. Upon the wall, near the door of this room, is the bulletin board, covered thickly with notices of the various meetings and clubs which the students keep up and attend. A special building is to be provided for the library as soon as possible.

The rooms of the young ladies are here, as in all the Oxford women's colleges, a sort of half study, half boudoir. The furniture provided by the hall consists of a single bed, which may be converted by artistic coverings into a couch by day; a study desk and bookcase, commode and screen, with several comfortable chairs; but each student adds to this simple outfit a large number of additions and touches, which convert the room into something that shall represent her own individuality. She may carry out in fancy what she pleases, from the severest simplicity to the wildest exuberance of draperies, flowers, and pictures. Watts's Hope and Rossetti's Beata Beatrix and Sancta Lillias will there be found in many repetitions, and the corner where the books are piled will have above it a pair of tennis racquets crossed. A pair of screens gives the drawing-room effect to the chamber by day, and upon the low table are the delicate china cups which are to serve when the afternoon tea or the 10 o'clock cocoa is the order of the day or evening.

The principal of the hall is a woman of great energy, tact, and administrative capacity, one whose enthusiasm is felt by all who come under her influence. She has large ambitions for the hall, and through her efforts it has greatly increased in numbers and in gifts that have been brought to its library and its fund for scholarships. While encouraging scholarship in all possible ways, she is laudably careful for the physical health of the young women under her care, and takes the deepest interest in all matters that will be for their personal welfare.

There are three ladies residing in the halls who act as tutors to the students, and there are four other nonresident tutors. No lectures, however, are given in the halls; all the students go for lectures either to the association hall or to the different colleges in which the lectures are given, accompanied always by an approved chaperone.

Somerville College is already old enough to boast of the honors that have been gained by its inmates, and it is interesting to see in each yearly report an account given not only of the honors that have been received in their examinations in Oxford but of the positions that they have gained as head mistresses or lecturers in other institutions. There is no doubt also that the alumnae look back to the hall in which they lived

and studied with very much the same sentiment that American students regard their alma mater.

Somerville Hall is strictly undenominational in principle, and the report declares that care is taken in its management to place members of different religious denominations on the same footing. Prayers are read daily in the hall, but students are not required to attend. The students are, however, expected to attend on Sundays a place of worship chosen by themselves or their parents, and to inform the principal what place of worship they choose for regular attendance; but this rule is one to which exception would be allowed.

It is to be feared that the American students coming to this or any other of the English colleges or college halls will find the particular rules given for their guidance in regard to conduct somewhat restrictive. These rules pertain to matters which an American young lady is supposed to take care of herself without special directions. Certainly nothing is mentioned which the instinct of a lady will not suggest as in the main proper and best to do, and when one realizes the care that is exercised in the best English homes over the comings in and goings out of daughters, one sees that these directions laid down for college women can not be considered revolutionary or even unusual. The English students themselves do not find them troublesome in the least; in fact, many of them have more liberty in the college life than they had at home. Some of the rules that are distinctly named are as follows:

No student is to be out after sunset without leave. Invitations from friends may not be accepted without consulting the principal. Students must be in their own rooms by 11 p. m. Evening engagements should not be made more than once a week. Students may not invite gentlemen to their own rooms nor receive them there if they come. Students may not accept invitations to the rooms of members of the university or enter any such rooms except under special circumstances and with the sanction of the principal.

It is not to be supposed from these last two restrictions that there would be any great danger of their infraction or that they have been made in order to interfere with a growing custom. It has, however, long been an established university form for college men to have always a parlor in their suite of rooms, in which it is considered proper for them to entertain ladies at lunches or afternoon teas; but it would hardly seem necessary to suggest that young ladies should not go to entertainments of this sort unless accompanied by elderly ladies. It is required that the chaperone who accompanies ladies on any of these occasions shall be one whom the principal herself knows, or whom the student's mother knows, and the gentleman whose room is visited must be one known by the parents of the young ladies themselves. This is an absolute law, that if calls by gentlemen are received at the hall, the card is sent to Miss Maitland, and the drawing-room is the

place where the guest is entertained. It can not be said that there is a rule against the reception of more than one call in the term from the same gentleman, but the principal's sententious answer to the question on this point was, "It does not happen." There are various unwritten rules: Young ladies may not walk on the towing path; they may not go into college gardens; when going to lectures or to the shops two young ladies shall go together; they may not go to the Camera after dinner or to week-day college chapels unless special permission is obtained from the principal. To the rule that they may not go to college or other dances there is absolutely no exception. These particulars are given in order to show the amount and kind of care that is exercised over the conduct of young women, and to which English girls can not be said to make objection. It has also been said that American women do not find, when they come to English colleges, that they are very much inconvenienced, under the circumstances, by the rules of the institutions.

The general impression which a company of English women makes is that of physical vigor. There are of course exceptions, but in the main the English habit of activity in pedestrianism seems to have brought about its legitimate result. It is an understood thing that the time from lunch to afternoon tea shall be spent in games or other outdoor exercise, and the days are very few in the whole English year when it would be impossible on account of the weather to take a long walk. The vicinity of Oxford could not be surpassed in convenience for this method of increasing physical vigor; the roads are excellent, and the scenery, while always quiet, is sufficiently attractive to prevent any walk from being dull. For the rare days when it is impossible to go out, a small gymnasium is provided, which is, however, sufficient for the number of those that use it. It is provided with appliances for all kinds of exercise, including fencing, and a sergeant acts as instructor.

It must be admitted, however, that the application of the latest and best science to the needs of young women has not here progressed very far.

The students have also a boat on the Cherwell, and are required to pass a swimming test of 50 feet before using it. Nearly all of the young ladies at Somerville have passed this test.

The daily routine will not vary much in the different halls. Prayers are read at 8 o'clock, and breakfast may be taken from 8.10 to 9. The time from 9 to 1 is spent usually at work, and the devotion of the students to work hours is something to be noted. The students during this time are either in their rooms studying, or attending lectures in the various colleges or the association rooms, or at the Bodleian Library. Between 1 and 2 lunch may be obtained; this is a very informal meal. From 2 o'clock till afternoon tea, boating, tennis, and other games are the order; from 4 to 5 tea is to be had in the drawing-room, and 5 to 7

is considered again a work hour. At dinner students are expected to be punctual, and evening dress is en règle.

The evening may be spent in study, but this is also the time for the various kinds of entertainments which the students get up. They are concerts, private theatricals and charades, and the meetings of the various societies. At the Browning Society, the Shakespeare Society, the Scientific and Philosophic Society, papers are presented and discussed on subjects whose general character may be indicated by the names of the associations. The Mermaid Society, named from the famous tavern, is organized for the study of general literature. There are also various meetings connected with philanthropic missions in which the students are interested. One of these is the university settlement in Southwark, London, which is supported by the college women of Oxford and Cambridge together. Another is a mission in the Transvaal, for which a former Somerville student has aroused their sympathy. The Knitting Society which made hand-knit jerseys for North Sea fishermen is now extinct, but no one can calculate when either it or another of the same fanciful sort may break out. But perhaps most important of all is the Debating Society. In this society the students of Somerville and Lady Margaret halls unite their efforts. The meetings are held alternately at Somerville and Lady Margaret, and it must be said that no subject is too wide or too deep for it to handle; the laws of science and the policy of great statesmen come in for their share of discussion. All the political questions of the time are settled and decided in these debates; and the more paradoxical the expression of the question, the more interesting the debate, the main object being to provoke discussion. The "honorable proposer" opens by a written address; the "honorable opposer" follows with a written response. All members of the society are then permitted and urged to take part in the more or less exciting discussion. The vote is taken not on the merits of the debate but on the merits of the question. The greatest interest is felt in the Debating Society, and it has been proposed that the Debating Society of the women's colleges at Cambridge should unite with the Debating Society of Oxford in an interuniversity debate. In fact, a beginning has been made in this direction and will no doubt be carried out, to the great increase of interest in this admirable method of culture.

The dates of terms at Somerville correspond with the university terms.

The students are not admitted under the age of 17, and in case the responsions or some equivalent examination has not been passed a special examination will be required by the principal, in order to show whether the candidate is qualified to profit by the course of study proposed. This examination is upon algebra or Euclid and any two languages of the following: Latin, Greek, French (or Italian), and German. The papers are sent to the candidate and done at her home "upon honor."

A letter of introduction and recommendation from some person who knows about the courses of study that have been pursued by the candidate will, however, in many cases be sufficient. References are always required, and special pains are taken at the hall in regard to the reception of persons that have been in houses where there has been any infectious disease within the preceding month. The card of application for admission calls for the name of the candidate in full; the name, address, and profession of the parent or guardian; date of birth; the church desired; statement in regard to health; account of previous education, giving the name and address of the principal of the school last attended; the amount of examinations that have been passed, and the names and addresses of two referees, of whom one shall be a lady; the name of the former schoolmistress, or of the clergyman in the town where the candidate has lived, or of some other person of recognized position, will be accepted as referee.

Inclusive fees are charged for board, lodging, tuition, and lectures. These are £28 12s. 4d. a term, to be paid in advance; for rooms in the wing and West buildings an extra charge of £2 2s. is made. Cottage rooms are £26 a term. Students are expected to give three months' notice before leaving. Failing this, they are liable to be charged for the ensuing term, subject to the discretion of the principal.

There are, of course, various small expenses connected with the different associations with which the students are connected, but most of them are optional. Then there is laundry, which would not amount to more than 2s. (50 cents) a week, and, of course, there are the students' own books to be bought. If friends are invited to dinner there is a charge of 2s. 6d. and for lunch 1s. 6d.

There are a certain number of scholarships offered by the college; three of the annual value of £50 and tenable for three years, given by the Clothworkers' Company. There is also a Pfeifer scholarship (£50 a year) and a Pfeifer exhibition, and a St. Mary Conybeare scholarship (£50) for classics.

#### VIII. LADY MARGARET HALL.

In the year 1879 it was decided to establish a second hall for women, which should have the special object of providing a home for the daughters of people who were connected with the Church of England. The proposed hall was announced as "an academical house of the members of the Church of England (with provision for the liberty of members of other religious bodies), which should secure to students the advantages of a common life with the ways and tone of a Christian family; the production of certain rules as to hours established, etc., general supervision of students, definite religious instruction, the advice and assistance of a lady of experience and other high qualifications acting as lady principal."

A house was taken in Norham Gardens, a street in the new part of Oxford, where a constant succession of beautiful villas, embowered in

greenery and surrounded by gardens, lines the graceful winding streets. Lady Margaret Hall may be a fifteen-minutes walk from Carfax; it is in the outskirts of the city, and the view from the upper windows looks out over the fields and meadows leading down to the Cherwell. The house does not differ in its appearance from the suburban residences that surround it. It stands close to the street, but a beautiful garden of moderate size at the back affords room for a tennis court or two. Across the street from the hall is a second house which is really a part of the hall, and which is called Wordsworth Hostel. The hostel is named from Miss Wordsworth, the principal of the hall, and the hall itself is named from Margaret Tudor, Countess of Richmond. A cast of her recumbent figure on the beautiful tomb in Westminster Abbey has been placed in the chapel of the hall. The dwelling house which was taken in the first place for the hall was increased by the addition of several rooms and a small chapel. The chapel is a small room, but it has received various rich decorations as gifts from friends of the hall. A valuable and interesting thirteenth-century picture ascribed to Gaddo Gaddi has been placed over the altar. Some gifts of candlesticks and vases, altar linen, and other appropriate furnishings, together with the marble pavement and beautiful windows of stained glass, not by any means forgetting the cast of the namesake of the hall, which lies to the left of the altar, give to some extent the appropriate effect for a chapel and tone down the newness of the general appearance.

The drawing-room at the hall is a beautiful apartment, whose windows look out upon the lawn at the back. Its walls are lined with pictures, and the air of the room is that of comfort and elegance. All that has been said of the rooms of the students at Somerville may be repeated for this hall also, but as Lady Margaret is a smaller place, only about twenty persons being accommodated within the hall itself, it is easier to give the freedom of a home to its inmates than where larger numbers are congregated. It is the special aim of the principal that Lady Margaret should have the air of a home. At present the total number of students accommodated is 38, but fresh accommodations for students, etc., dining hall, and library are contemplated.

Miss Wordsworth is the daughter of the late Dr. Wordsworth, Bishop of Lincoln, a lady known for her literary ability and scholarship as well as for her social charm. The brightness and grace that she introduces into the conversation whenever she joins the group are always welcomed, and her friends say that she always carries the conversation to a higher plane as soon as she enters. Of a deeply religious nature, it must be that her life and character make a deep impression upon the young women who are under her influence. She herself reads the prayers at the night and morning chapel and conducts the classes which are held weekly in religious knowledge, and which all the students in the hall attend. The subject for these classes and Bible study changes from year to year. One year they were in the Gospel of St. Mark, another

on the Decalogue and the Book of Joshua, and the next on St. Luke's Gospel. The statement in the house rules that students are expected to be at prayers morning and evening and to attend divine service at least once on Sundays has the force of a command; and the Holy Communion is celebrated in the chapel of the hall once a term. Lenten addresses are given there also, and courses of lectures by various reverend gentlemen are given in the association rooms, which the students have the advantage of attending. Through all these means which are placed at the command of the students by the principal and by the officers of government for the hall, it is hoped to give a cast to the life in this hall which shall be specially felt by those who are members of the Church of England, and it is the desire of the principal that a high tone of character may be the result in the students.

In regard to the discipline of the house and the daily routine of life, there are not many differences between Lady Margaret and Somerville. If possible, the students are thrown upon their own responsibility a trifle less at Lady Margaret. Some rules which are left to the power of tradition only at Somerville are distinctly expressed at Lady Margaret. Students are expected to be in their rooms for the night at half past 10, nor should they visit each other's rooms before 1 p. m. The rules about going two and two and about walking on the towing path, or in college gardens, or going to week-day college chapels, are definitely expressed. Visitors other than fathers, uncles, and brothers may be received on Monday afternoons only between 4 and 6. No student may accept invitations from gentlemen unknown by her parents, or from residents unknown to her parents or the lady principal.

Besides the lawn-tennis court and the two boats on the Cherwell, which may be used by students who have passed the swimming test, there is a small gymnasium. No student may use the boats, however, without leave from her parent or guardian, and special permission must always be obtained from the principal.

The dates for the terms at Lady Margaret Hall correspond with those of the university, and the conditions of admission are the same as at Somerville. Each student has a room to herself, as at Somerville, which is fitted to serve as sitting room and bedroom. The charges are £75 a year for each student, exclusive of expenses strictly personal. There are the usual number of societies and other miscellaneous matters that call upon the student for slight fees; an estimate of about 10s. a term, with 2s. a week for laundry expenses, would be fair.

The fees for instruction are paid to the association, and will not exceed as a general thing £8 a term. As these are not included in the £75, residence here is considerably dearer than at Somerville. In case of sisters or other ladies willing to share the same room, £65 a year would be the price for each. Three months' notice before leaving is required. There are various scholarships, information in regard to which may be obtained by addressing the principal. They vary in amount from £50 to £25. The scholarship examination is held at the hall each June.

## IX. ST. HUGH'S HALL.

Another hall, charmingly situated at 17 Norham Gardens, in the near vicinity of Lady Margaret Hall, has also been established. It has been in existence for eight years, and has been designed specially for young ladies who wish to gain the advantages of university education on an inexpensive scale. The name of St. Hugh was given to the hall in memory of the great Bishop of Lincoln, of whose diocese Oxford formed a part, and who is said to have had a remarkable reverence for women. A window in St. Giles' Church bears his name, and his figure, with that of his favorite swan, is to be seen on the northeast pinnacle of the spire of St. Mary's. The idea of this hall suggested itself to Miss Wordsworth, the principal of Lady Margaret, in consequence of her receiving applications from many students, notably the daughters of the clergy, who could not afford the fees paid at Lady Margaret Hall, but who it was thought would be content with a less luxurious rate of living in order to share the same educational privileges. The economy appears in the arrangement of rooms. Two students are expected to share a bedroom, which is divided by screens, and which it is not expected will require heat; the bedroom fire is considered an extra. The students have a large study room, charmingly situated, with an outlook upon the tennis ground and the woods beyond, and in this room each student has a desk to herself, where she keeps her own books and papers and at which she sits for study. Silence is positively required in this room, and nothing can be more cheery than the well-lighted and comfortable apartment. St. Hugh's Hall is now being enlarged, and in October, 1892, there will be room for 24 students. There will be 8 rooms which are "share" rooms, and there will also be 14 single bedrooms and 2 small single rooms. The price for the share bedrooms is £45 a year for each person, including board, and the occupants will be expected to work in the study. The price for the single rooms is £65 a year, and this includes two scuttlefuls of coal, which is considered a sufficient quantity. For a small single room the price is £55 a year. The students are requested to bring sheets, towels, pillowcases, toilet soap, etc.

St. Hugh's Hall is, like Lady Margaret Hall, intended primarily for the benefit of members of the Church of England; the religious teaching is on the same lines as that at Lady Margaret Hall. A tiny chapel is provided, and the service of the Church of England is used. Members of other religious bodies, however, are not debarred from admission. The rates mentioned above do not, of course, include the lecture fees, which vary from £15 to £24 a year, and are payable to the General Association for Women's Education. In case any students have not passed the Oxford first examination for women, an equivalent examination is provided which they are required to pass in order to be admitted. This need not be detailed, for the studies here, in all things connected with lectures, are on exactly the same footing as those at Somerville

and at Lady Margaret Hall. Good references are required and a student is expected to remain no less than a year. All students who can swim 50 feet are allowed the use of the St. Hugh's boat on the Cherwell.

St. Hugh's is under the supervision of Miss C. E. A. Moberly, a charming and cultivated lady, whose grace of manner and interest in her charge peculiarly fit her for the responsible post which she holds. She can be addressed at St. Hugh's Hall, 17 Norham Gardens, or in the vacation at The Parsonage, Sydenham, London, SE.

#### REGISTERED HOME STUDENTS.

Students who wish to work in connection with the association and yet not to reside at one of the halls may be registered as "home students." A special committee has been appointed take charge of them, the principal being Mrs. A. H. Johnson (8 Merton street, Oxford). Certain regulations are laid down with regard to their work. These are:

1. Students wishing to attend lectures not open to the public must send in their applications on the prescribed forms, duly signed, to the lady secretary of the Association for the Education of Women.

2. Students should consult the principal before arranging for tutorial assistance.

3. Students must pay their fees direct to the treasurer of the Association for the Education of Women.

Students, unless residing with parents or guardians, must obtain leave from the principal to reside in other houses approved by the committee, and are required to conform to certain rules.

Students of a hall who wish to leave the hall, but to continue to reside in Oxford as students of the Association for the Education of Women, and home students who wish to enter a hall must obtain permission from the authorities of the hall and from the home students' committee.

#### X. THE LIBRARIES.

If there were nothing else in Oxford to make it worth while for a student to go there, the Bodleian would still be an attraction amply sufficient to make pilgrimages to it as a worthy shrine interesting. The collection of buildings of which the Bodleian and the Radcliffe library buildings form a part is one of the most attractive in the world, not because of their architectural beauty alone, but because of their endless historic associations and the graceful variety in their arrangement and proportions. Entering the inclosure of the Divinity Schools from the arched passage in the center of the Clarendon Building, one feels in the very atmosphere of the Middle Ages. The inscriptions over the doorways which lead out from this square record the divisions of subjects of study which were used in the days when Aristotle was, if possible, even more the ruler of the philosophical disputations than he is now. One might, in fact, believe that if there were wild boars roaming in the forests of Oxfordshire at the present day (if, indeed, there were any forests left for them to roam in), the wandering student, out in search of philosophic seclusion, might still be found, "Ethics" in hand, to drive his book down the throat of the beast in case of an attack.

Literæ Humaniores is rightly named the "Greats" in the slang of the university town, for while there are but 12 courses of lectures offered in mathematics, there are 124 more or less closely related with the classics, and the explanation of those cabalistic inscriptions over the doors in this ancient quadrangle will perhaps also make clear why the University of Oxford still considers classical history and classical philosophy as the "more human" instruction. Under the low doorway which is marked "*Schola vetus Medicinæ*" one enters a winding staircase that leads to the Bodleian proper, but the room where most of the reading and studying is done is further beyond the square of the Divinity Schools, in the "Camera," or Radcliffe Building. The open space in which this noble building stands has toward the east the beautiful façade of All Souls, with its many delicate turrets; beyond, toward the south, is the church of St. Mary's, the university church; and toward the west is Brasenose College, the back of the gardens of Exeter, with the far-spreading branches of Bishop Heber's beloved horse-chestnut tree extending over the wall and casting a deep shade upon the square. The Radcliffe Library, which is now called the "Camera Bodleiana," is a beautiful octagon in its ground plan; above this it is cylindrical, with Corinthian columns about it, and is crowned with a majestic dome, beneath which is the reading room. The lower part of the building is filled with books, chiefly those that have been published since 1850. The Camera or reading room itself is reached by a long winding flight of stone steps. It would be hardly possible to imagine a more delightful place for study. The lighting is excellent and the room is always absolutely quiet. In the center of the room is a table on which are placed the very latest books, such as have not yet been catalogued, and several other circular reading tables, on which are the last received numbers of many leading periodicals, both English and foreign. Large cases hold the books which contain the catalogue; other cases contain several thousand selected books, carefully chosen and continually kept up to date, which may be taken without applying to the librarian and used in that room. These are the books which are most used, and are always kept conveniently at hand. Books may be brought between 10 o'clock in the morning and 10 at night to this room from the rooms below by the clerks, or between 10 in the morning and 5 in the afternoon from the Bodleian itself, on application through a card, copies of which are found upon the tables. The book when drawn may be retained in the reserved shelves for a week under the name of the student, but no books are ever taken away from the library. In the compartments around the sides of the room are desks and tables conveniently arranged and supplied with pens and ink and paper. These study compartments are well lighted and comfortable. There is also a gallery to which books for immediate use are taken for the use of students in special subjects.

But if the Camera is a delightful place for study, the reading cells

and cages in which the students sit in the Bodleian Library itself may be called the very home and retreat of scholastic research. Every thought of busy and strenuous life seems to retire far hence when one comes into the deep hush and classic shade of this room. Entering again by a long staircase, one finds a narrow room surrounded by book-cases, and with cases in the center containing the prodigious volumes of the catalogue, and where also stand a great many glass-covered compartments in which rare and treasured works are shown. Crossing from this room to another, similarly formed, is a long hall, leading from which, upon either side, are many book-lined reading stalls filled with comfortable desks and chairs provided with appliances for writing. To these places are brought the volumes of texts or other valuable works which are the object of study, and they may be left, with the name of the reader, for a week or longer. The light comes in through gothic windows; the ceiling is covered with armorial decorations; pictures of ancient worthies are hung about the walls, and the whole atmosphere is filled with the associations of ancient days.

The catalogue of the library, a copy of which is kept at the Camera and at the Bodleian also, consists of a large number of books of immense size and of great weight, upon whose heavy leaves are pasted tissue slips containing the name, author, and mark of each book. It is an authors catalogue; but a subject catalogue is in process of preparation, and an arrangement of departments has been begun upon a system approaching the well-known decimal system. The work is in embryo as yet, and proceeds very slowly, since it consists of a mere rearrangement of the tissue slips that are used for the authors catalogue. The idea seems not to have much more than dawned on the Old World that the tremendous increase in usefulness of a library with a thorough subject catalogue based on an expansible decimal system that touches and includes all the departments of human knowledge, that has been written on stiff cards easily handled and placed in drawers as high as the average height of a human being, amply repays the labors of some scores of trained cataloguers for a term of years. But the subject catalogue, as far as it does go, is of course exceedingly useful. Readers desiring to consult any section of the catalogue may do so by filling in a special printed slip and handing it to the librarian. At the Bodleian for some of the special collections there are also special catalogues, and there are also some classified hand lists. A catalogue of the 27,000 volumes of manuscripts in the library has been begun, and thirteen parts of it have been published.

In the use of the library much depends upon the spirit with which the application of the student for information may be received, and it is a great pleasure to say that one finds in Oxford a library in which the ideal seems to be that students shall be able to find what they want—that the books are to be used, and not to be simply stored away. The courtesy and interest of the librarians and clerks can scarcely be

surpassed, and while it does seem strange that the subject catalogue should not have been long since completed and put into operation, it is so extraordinary a thing in a European library to find one even begun, or the idea of one even thought of, that it is most refreshing to see this important element in the usefulness of a library begun and an effort being made to bring it into complete use.

Admission to the library proper at the Radcliffe Camera is open to women on application for a printed form and having this filled by the signature of some master of arts. Any sufficiently respectable introduction will make it possible for a person who purposes serious study to have the use of the library. There is no special delay about it, and ladies will never feel any difference in the treatment that they receive from that which would be accorded to men. Reading is done chiefly in the Camera, but where any special book, especially one published before the middle of the present century, is to be used for a long time, the reader is expected to retire to one of the reading stalls in the Bodleian itself.

The library contains at present 475,000 bound volumes of printed works besides the 27,000 manuscripts. It is increasing very fast and will doubtless soon overflow the buildings devoted to it. With the leave of the librarian or curators, manuscripts may be copied and published. The galleries of the Bodleian contain a collection of historical portraits and a large number of other interesting things. The Ashmolean Museum is in a building near the library and contains many interesting collections—historical, archæological, etc.

At the Taylorian Institution there is also a large library, consisting chiefly of books in foreign languages. This library may be used by getting the signature of two masters of arts. The printed request, with these signatures, is laid before the committee, and about two weeks later the permission is given. The library is open from 11 a. m. to 5 p. m. throughout the year, except from August 16 to September 14, and books may also be taken out.

At the Radcliffe library proper, which is placed now in the university museum, there is also a large collection of books on special subjects. This library is for the benefit of scientific students. Books are arranged in subjects. (1) Philosophy, (2) mathematics, (3) astronomy, (4) physics, (5) chemistry, (6) mineralogy, (7) geology, (8) voyages and travels, (9) biological science, including human anatomy, anthropology, comparative anatomy, embryology, (10) medicine, (11) biographies. Many large illustrated works of importance are in the reading room, and cases containing transactions and proceedings of academies, journals relating to special scientific subjects, and a collection of standard books for immediate use. The library is open from 10 a. m. to 6 p. m. during term, and in vacation from 10 a. m. to 4 p. m. Readers are admitted to the library and reading room on the introduction of a professor.

The various colleges and halls have also libraries of their own, to be

used by their members. While the libraries in the halls for women are confessedly inadequate, they are constantly receiving additions and will no doubt be greatly increased in the near future. The library at All Souls College, a special library for the law department, may be used by women.

The city library is also open for the use of all who get their tickets of request signed by two ratepayers of the city. There are also several circulating libraries.

## WOMEN AT THE UNIVERSITY OF CAMBRIDGE.

### I. HISTORICAL INTRODUCTION.

The admission of women to study at Cambridge is due to a double movement, which, starting with different aims, at last coincided in an endeavor to place the work of women students on lines exactly parallel to those of the men.

The founders of Girton College had, from the first, a definite aim, which they pursued consistently, in spite of all difficulties. This aim is thus expressed:

This college is designed to hold, in relation to girls' schools and home teaching, a position analogous to that occupied by the universities toward the public schools for boys.

The memorandum of association contains this clause:

The objects for which the association is established are to erect, maintain, and conduct a college for the higher education of women; to take such steps as from time to time may be thought most expedient and effectual to obtain for the students of the college admission to the examinations for degrees of the University of Cambridge, and generally to place the college in connection with that university.

The promoters put their trust in the generosity of an enlightened public; and it was not misplaced. It was decided to raise the sum required for building and other preliminary expenses by public subscription and by the sale of a limited number of presentations. The first list was headed by Madame Bodichon with £1,000 (\$5,000). The author of *Romola* appears in the same list with a donation of £50 (\$250). One of the first and most liberal benefactors was the late Lady Stanley of Alderney, while Miss Emily Davies was the mainspring of enthusiasm.

While a building was being constructed near Cambridge a small attempt was made at Hitchin, about 20 miles from Cambridge. Here a house was hired in 1869, and 6 students entered. Miss Emily Davies, who had done so much to promote the scheme, became mistress in 1872. Thirteen was the largest number of students ever in attendance at one time at Hitchin. From the very first, in spite of all difficulties in the way of obtaining tuition and the insufficient preparation of some of the students, such regulations in regard to residence and order of examinations as were imposed on men students were followed by the women, and the course of study was that for the honors examinations

of the University of Cambridge. Distinguished professors, e. g., Professor Seeley and Dr. Hort, came over to Hitchin to lecture, and by the kindness of the examiners the lady students were examined informally by the same papers as were set for the men, and the result of the examination was informally made known. Thus the very first woman who took a tripos examination had fulfilled every condition that would entitle her to a degree had she been a man. In 1872 the association that had started the work was incorporated as Girton College. In October, 1873, the college was removed to Cambridge. The numbers gradually increased and the building received additions from time to time. The students continued to pass examinations informally until the year 1881, when the university for the first time took steps to acknowledge the women students.

The aim of Newnham was at first different. It proposed to attract to Cambridge women who wished to continue their studies, but did not specially aim at following the academic courses or at passing the university examinations. Miss A. J. Clough had, as early as 1865, conceived a scheme for starting in large towns courses of lectures for girls and teachers. Liverpool was the first center at which such lectures were given. In 1869 Cambridge started the higher local examinations for women over 18. The result of this was a need for higher instruction, and in 1870 courses of lectures to women were first delivered in Cambridge, about 70 or 80 joining at once. In order to attract large numbers of students and to accommodate those who came from other parts, it was arranged to provide a house of residence, and this was the nucleus of Newnham College. In 1880 Newnham College was formed by the amalgamation of the association for providing lectures for women in Cambridge and the association for providing a hall of residence for women attending the lectures. The articles of the association contain the following:

To establish and maintain at or near Cambridge a house or residence or houses and residences in which women students may reside and study.

To provide for the instruction of women students and for the delivery of lectures to such students or to other women at or near Cambridge.

The first students of Newnham usually worked for the higher local examinations, or simply pursued their studies with no definite examination aim. A very few entered for the tripos examinations, and passed them informally, but no attempt was made rigidly to follow the regulations as to residence and preliminary examinations that were imposed on the men. It was the formal acknowledgment of the Women's College by the university in 1881 that brought the work of Girton and Newnham into accord. There are still some slight differences which will be dealt with under their special headings.

## II. PRESENT POSITION OF WOMEN.

In the year 1881 the women's colleges received their first formal acknowledgment from the university. In 1880 the remarkable success

of Miss C. A. Scott, now professor of mathematics at Bryn Mawr, in the examination of the mathematical tripos, attracted considerable attention to Girton and the work done there; and as a result the college decided to join in an appeal to the university to open the examinations formally and grant the degrees to women. This appeal was partly successful. Although the degrees were refused, a syndicate appointed for the purpose presented a report which was accepted by a very large majority. On the main clauses the voting was 398 in favor to 32 against. The main features of the "graces" passed by the senate are the following:

1. Female students who have fulfilled the conditions respecting length of residence and standing which members of the university are required to fulfill may be admitted to the previous examinations and to the tripos examinations.

2. Such residence shall be held at (*a*) Girton College, or at (*b*) Newnham College, or (*c*) within the precincts of the university under the regulations of one or other of these colleges, or (*d*) in any similar institution within the precincts of the university as may be recognized hereafter by the university by grace of the senate.

3. Prescribes that certificates of residence shall resemble those supplied to the men.

4. States that either the previous examination or one of the usual substitutes must be taken, except as provided under 5.

5. Female students who have obtained an honor certificate in the higher local examination may be admitted to a tripos examination, though such certificate does not cover the special portions of the higher local examinations which are accepted by the university in lieu of parts or the whole of the previous examination, provided that such students have passed in Group B (language) and Group C (mathematics).

6. Provides that all female students must be recommended for admission to examination by the authorities of the college.

7. After each examination a class list of the female students who have satisfied the examinations shall be published by the examiners at the same time as the class list of members of the university, the standard for each class and the method of arrangement in each class being the same in the two class lists.

8. In each class of female students in which the names are arranged in order of merit the place which each of such students would have occupied in the corresponding class of members of the university shall be indicated.

9. The examiners for a tripos shall be at liberty to state, if the case be so, that a female student who has failed to satisfy them has in their opinion reached a standard equivalent to that required from members of the university for the ordinary B. A. degree.

10. To each female student who has satisfied the examiners in a tripos examination a certificate shall be given by the university, stating the

conditions under which she was admitted to the examination of the university, the examinations in which she has satisfied the examiners, and the class, and place in the class, if indicated, to which she has attained in each of such examinations.

The remaining paragraphs are concerned with technical details.

In 1884 some additional graces were passed, laying down certain rules for the government of women's colleges and the construction of the buildings. They provided (*a*) that the buildings should be suitable; (*b*) that each college should have a committee of management of not less than 9 members, 3 at least of the members of the senate of the University of Cambridge, and that the ordinary place of meeting for the committee should be in Cambridge; (*c*) that the arrangements for tuition and discipline should be adequate; (*d*) that before recognizing any new establishment for women the council should ascertain that the conditions above named were complied with.

Arrangements are also made for a temporary recognition of a new establishment, to be followed by a permanent recognition in the case of adequacy.

To understand the exact position of women under these regulations it is necessary to make clear the position of the male students. On matriculation they become members of the university; they are subject to university discipline; they have to reside for a certain number of terms and a certain number of days in each term; they have to take certain examinations, which are different in the case of candidates for an ordinary degree and candidates for a degree in honors.

Women are not members of the university, nor are they subject to university discipline. They are members of colleges, which colleges in their corporate capacity are acknowledged by the university, and have to submit to certain regulations laid down by the university; they have to follow the rules for residence laid down for members of the university; they are admitted to the honors examinations of the university, but are excluded from the ordinary pass degree examinations; they are allowed, if they please, to substitute for the previous examination (the first university examination) another examination, the standard of which is higher, but which admits the exclusion of Latin and Greek.

The differences of treatment thus far are slight and, in the eyes of many, superfluous, as few women will avail themselves of their right to avoid the previous examination; and the absurdity of admitting women to the harder degree examinations and excluding them from the easier ones is patent to all. The real difference between the positions of male and female students is the right of the former to use the letters of the degree, B. A. and M. A., while the latter receive instead a diploma, but are not allowed to claim the degree. This disability has been more and more acutely felt as newer universities have opened their degrees to women; and in the year 1887 petitions from several different quarters were sent up to the senate of the university, pointing

out the anomaly in the position of women and asking for the conferment of the degree. This petition contained the following statement:

Systematic study and discipline are supplied by women's colleges, and the university has made provision for testing and certifying attainment according to the standards in honors adopted for its own members; but under the existing regulations women do not become members of the university, and though they may have satisfied every condition which entitles an undergraduate to a degree, the degree itself is withheld.

The memorials were very largely signed by members of the senate, old students of the colleges, head mistresses, assistant mistresses, and miscellaneous persons whose names would bear weight.

The opposition took the line (*a*) that the higher education of women should not be permanently tied to that of men; (*b*) that if degrees were granted to women they should be conferred by some independent authority.

The opposition carried the day and the matter was not even brought to a vote. No further attempt has been made since to obtain the degree for women. Meantime the remarkable successes of the women students and the increase in the number of universities in the United Kingdom that confer degrees on women is making the anomaly all the more glaring. Yet perhaps the friends of women's education are doing well to wait until the situation becomes so absurd that the university, in order to preserve its self-respect, will be forced to make a remedy.

### III. EXAMINATIONS.

In an English university the part played by examinations is a very important one in the conferment of degrees. The work of the class room is never taken into consideration. The place of the candidate depends entirely on his success in the final examination; and the results of these examinations are very widely made known. It is of the utmost importance for a man's future career that he should obtain a place in a high class and a high place in that class.

For the arts degrees of the University of Cambridge two courses of study are possible, that for the ordinary degree and that for the degree in honors. As the latter one is open to women, it will be sufficient for our purpose to confine ourselves to that.

Most students at Cambridge are members of a college as well as of the university, and they have, therefore, on admission, passed the entrance examinations of their college. The standards of these examinations vary a good deal, and are in no way controlled by the university. Girton and Newnham have each their own entrance examination.

The first examination that has to be passed after admission is the previous examination, commonly known as the "Little-go." This may be taken at any time before a candidate enters for a tripos (honors degree) examination, but it is advisable to take it as early as possible. It is held three times in the year—in October, December, and June.

Well-prepared students may take it at the beginning of their first term (in October), and then have their full three years for their degree work.

The examination consists of three parts, which may be passed the same or at different times.

The subjects of Part I are (1) one of the Gospels in the original Greek; (2) one of the Latin classics; (3) one of the Greek classics; (4) unseen Latin translation (with dictionary); (5) questions on Latin and Greek grammar, with special reference to the set subjects.

In the case of students who desire it an additional paper on one of the Greek or Latin classics is substituted for the paper on the Greek Gospel.

The subjects of Part II are (1) Paley's Evidences of Christianity; (2) Euclid, Books I, II, III, parts of V and VI; (3) arithmetic; (4) elementary algebra.

In the case of students who desire it a paper in elementary logic is substituted for the paper on Paley's Evidences.

Part III (called "additional subjects") gives the candidate a choice among three subjects: (1) Mechanics and trigonometry; (2) French; (3) German.

It is worth noting that these additional subjects are a survival of the days when every candidate for honors at Cambridge had to pass the mathematical tripos. For this requirement additional mathematical papers in the previous examination were substituted, and a few years ago further relief for nonmathematical students was provided in the permission to substitute a modern language for these mathematical papers.

There are certain examinations which the university accepts as substitutes for the previous, provided students have passed in those subjects which are required in the above examination. These are (1) the Cambridge senior local examination; (2) the Cambridge higher local examination; (3) the higher certificate of the Oxford and Cambridge joint board examination; (4) the examination at affiliated colleges and centers prescribed in the ordinances of the university.

One or other of these examinations has often been passed at school, and it is a convenience to students to proceed at once to their honors work without the delay of the previous examination, even though it is an extremely easy one.

Besides these substitutes allowed by the university to its members, there is the special exemption granted to women who have obtained an honors certificate in the higher local examination, including a pass in languages and mathematics.

The higher local examination was started in 1869 with the object of providing some inducement to girls to continue their studies after they left school. It became extremely popular, and before university examinations were opened to women its certificate was coveted by women who hoped to obtain good posts in schools. Of late years the improved

standard of the schools has made it possible for girls in the highest class to prepare for the examination, and for the better posts a better certificate (e. g., the degree examination of a university) has become necessary. The higher local has come to be regarded as a preliminary university examination, and as such may be a substitute for the previous examination.

The subjects of examination are arranged in groups. They include religious knowledge, English language and literature, languages (Latin, Greek, French, German, Italian), in which the candidate chooses one or more at pleasure; mathematics, moral science (logic, psychology, political economy), natural science, music, history. For an honors certificate, a candidate must satisfy the examiners in elementary arithmetic and in three of the eight groups, in two of which a first or second class must be obtained.

The examination is held annually in June, and there is an additional examination in languages and mathematics in December.

So much for the preliminary examinations. Though the standard is not very high, and the work required in preparation can hardly be regarded as university work, yet, as the previous or one of the substitutes is compulsory, and no possible exemption can be obtained, even by graduates of other universities, it is of importance for intending students to be acquainted with the regulations. The real work at the women's colleges is in preparation for the final honors examinations. These, for some reason, for which various explanations are offered, are at Cambridge called triposes. Tripos examinations are held in the following subjects: Mathematics, classics, natural science, moral science, history, mediæval and modern languages, oriental languages, law, theology, and miscellaneous sciences.

Several of the examinations are divided into two parts, both held in the Easter term of each year. Certificates of first, second, or third honors are granted to students for success in the first part alone, but after they proceed to the second part, for which a more special knowledge of one or two branches of the subject is required. The time of residence in Cambridge necessary to be kept by any candidate for a tripos examination varies from 5 to 13 terms. The first part may be taken in either the sixth or ninth term, but a student who took it in the sixth term and did not proceed to the second part would not receive a degree certificate, though one who took it in the ninth term would receive one. This is an important point, as showing the stress laid by the university on residence for at least three years. No one (except a member of an affiliated college) who has not resided three years at Cambridge can obtain a degree or degree certificate.

No one can present himself for a tripos examination more than once. Most students confine themselves to the work for one tripos, but those who prefer taking two to specializing in one can divide their time between the two. An undivided tripos or the first part of a divided

tripos must be taken not later than the ninth or tenth term of residence, unless another tripos has already been passed, and then the time may not be later than the thirteenth.

The following are the regulations for the various tripos examinations:

#### THE MATHEMATICAL TRIPOS.

This examination consists of two parts. The first part extends over eight days, and between the first four days and the second four days there is an interval of eleven days. All candidates must have passed in the first four days' examination before they can be admitted to the remainder of the examination; whether they have so passed or not is ascertained by the examiners during the eleven days' interval.

No candidate for Part I will be admitted earlier than in her fifth, or later than in her tenth term of residence.

Certificates of first, second, or third class honors (wranglers, senior optimes, junior optimes) will be granted for success in the eight days' examination, but only a third class will be awarded for success in the first four days' examination alone.

Only those candidates who have obtained honors in Part I in a preceding year will be admitted to the examination in Part II, and they will not be admitted earlier than in their eighth or later than in their thirteenth term of residence. The examinations for Part I and Part II are held in May. The examination for the first four days of Part I comprises the subjects included in Schedule I, the subjects 1, 2, 3 to be treated without the use of the infinitesimal calculus or the methods of analytical geometry.

*Schedule I.*—(1) Pure geometry; namely, Euclid, Books I–VI, Book XI, Props. 1–21, Book XII, Props. 1 and 2; simple properties of lines and circles; inversion; elementary properties of conic sections treated geometrically. (2) Elementary algebra, including the binomial theorem, exponential theorem, logarithms. (3) Elementary parts of plane trigonometry so far as to include the solution and properties of triangles. (4) Elementary parts of plane analytical geometry. (5) Elementary parts of differential and integral calculus. (6) Elementary parts of statics. (7) Elementary parts of dynamics. (8) The first, second, and third sections in Book I of Newton's *Principia*. (9) Elementary parts of optics. (10) Elementary parts of astronomy. (11) Elementary parts of hydrostatics. (12) Elementary parts of heat. (13) Elementary parts of electricity.

The examination for the second four days of Part I comprises the subjects included in Schedule II.

*Schedule II.*—(1) Algebra: Theory of equations; (2) trigonometry, plane and spherical; (3) analytical geometry, plane and solid, including curvature of curves and surfaces; (4) differential and integral calculus, including Fourier's Theorems and calculus of variations; (5) differential equations, including partial differential equations of first order: Functions of Legendre and Bessel; (6) elementary, elliptic functions, excluding the theta functions and theory of transformations; (7) statics, including bending of rods; attractions; (8) hydrostatics, including capillarity and rotating homogeneous liquid ellipsoids; (9) dynamics of a particle; (10) rigid dynamics; (11) hydrodynamics; (12) geometrical optics; (13) spherical astronomy; (14) electricity and magnetism.

In Part II there are eight divisions, and any candidate who shows proficiency in two divisions is placed in the first class.

(For particulars as to these divisions see *The Student's Guide to the University*, Part II (latest edition), Deighton, Bell & Co.

It may be well to call attention here to the fact that those who have had little or no training in mathematics before coming up to Cambridge can scarcely hope to obtain a good place in this tripos. The same remark will apply to the classical tripos.

## THE CLASSICAL TRIPOS.

This examination consists of two parts, both held in the Easter term. No student will be admitted to Part II who has not obtained honors in Part I; neither may she present herself for both parts of the examination in the same year.

No candidate for Part I will be admitted earlier than in her fifth term of residence or later than in her tenth unless another tripos has already been taken. To Part II she may be admitted not earlier than in her eighth nor later than in her thirteenth term.

*Part I.*—Papers will be set in the following: (1) Latin prose composition; (2) Greek prose composition; (3) Latin verse composition; (4) Greek verse composition; (5) Greek history, literature, and antiquities; (6) Roman history, literature, and antiquities; (7) Greek grammar and criticism; (8) Latin grammar and criticism.

Further, five papers will be set containing passages for translation from the best Greek and Latin authors, together with questions arising immediately out of such passages.

*Part II.*—This second part is intended for those students who wish to show a special and technical knowledge of some of the higher branches of classical learning. It consists of five sections, A, B, C, D, and E. All candidates must pass in Section A, and in one but not more than two of the other sections.

*Section A.*—Section A consists of four papers in higher classical scholarship, namely, one paper in Greek prose composition, one in Latin prose composition, one in translation from Latin into English, and one in translation from Greek into English.

*Section B.*—*Ancient philosophy.*—Five papers of three hours each will be set in this section.

A list of selected works of Plato, Aristotle, and other authors will be issued from time to time by the classical board, but a general knowledge of ancient philosophy will be required.

*Section C.*—*History.*—Five papers of three hours each will be set in this section.

The papers will contain questions on Greek and Roman history—political, constitutional, social, and literary—and on Greek and Roman law. The chronological limits of the papers will be determined from time to time by the classical board.

*Section D.*—*Archæology.*—Five papers of three hours each will be set in this section.

Questions will be set on (a) the history of art and the lives and works of artists in the ancient Greek and Roman world; (b) the mythologies, religious usages, and ceremonies of the ancient Greeks and Romans; (c) some group or class of monuments, to be from time to time specified; (d) the art and handicraft and the inscriptions of the ancient Greeks and Romans in relation to their national and domestic life.

*Section E.*—*Language.*—In this section there will be four papers of three hours each.

Questions will be set on Greek and Latin etymology; the history of the Greek dialects and of the Italian dialects cognate to Latin; Greek and Latin syntax, together with passages for translation from Greek and Latin authors; the etymology and usages of the Greek and Latin languages as compared with one another; simple questions on Sanskrit grammar, with special reference to the history of the Greek and Latin languages; general questions on the comparative grammar of the Indo-European languages, with special reference to Greek and Latin, and questions on the history of alphabets.

(For further particulars see The Student's Guide, Part III.)

It is chiefly in verse and prose composition that early training is important for this tripos; it is difficult to acquire in a short period by mere concentrated effort the grammatical accuracy and the simplicity and elegance of style which are demanded, and which more naturally spring from long use and habit.

## NATURAL SCIENCES TRIPOS.

The two parts of this examination are both held in the Easter term of each year, and only those who have obtained first, second, or third class honors in Part I or in the mathematical tripos may offer themselves for examination in Part II. Candidates may present themselves for Part I not earlier than in their fifth and not later than in their tenth term of residence (unless they have previously obtained honors in another tripos). For Part II they must present themselves not earlier than in their eighth and not later than in their thirteenth term.

The examination for this tripos is in the following subjects: (1) Chemistry, (2) physics, (3) mineralogy, (4) geology, (5) botany, (6) zoology and comparative anatomy, (7) human anatomy, (8) physiology.

In Part I there is an examination by printed papers lasting three days, and a practical examination, conducted either in writing or viva voce, or both. It is usual to read four of the eight subjects in which questions are set. Sometimes three are chosen, but it is inadvisable to take less than three or more than four. The questions in all the subjects in this part of the examination are of a comparatively elementary character, and it is intended that they shall test a knowledge of principles rather than of details. In arranging the class list the examiners are guided by the aggregate knowledge shown by the candidates, provided that no credit be assigned to a candidate in any branch of science unless a competent knowledge of that branch of science has been shown.

In Part II there are four separate papers of three hours each set in each of the above-named eight subjects, and there is a practical examination conducted in the same manner as that for Part I. It is usual for each candidate to choose two subjects for examination, and no candidate can be placed in the first class for proficiency in one subject unless a competent knowledge of some other subject be shown also.

(For further details see The Student's Guide, Part VII.)

## MORAL SCIENCES TRIPOS.

The two parts of this examination are held in May in each year. No candidate may present herself for examination in both parts in the same year.

Candidates for Part I will not be admitted earlier than in their fifth term of residence or later than in their thirteenth, unless they have already taken honors in some other tripos.

Candidates for Part II will not be admitted earlier than in their eighth term or later than in their thirteenth, and they must previously have obtained honors in Part I or in some other tripos.

Part I consists of two papers on each of the following subjects, together with a paper of essays: (1) Psychology, including ethical psychology, (2) logic and methodology, (3) political economy.

Part II consists of papers on (1) ethical and metaphysical philosophy, (2) ethical and political philosophy and the following special subjects: (3) History of philosophy, (4) advanced logic and methodology, (5) advanced psychology and psychophysics, (6) advanced political economy, one or more of the papers taking the form of questions for essays.

Candidates for Part II must take either (1) or (2), and also one or two but not more than two of the four special subjects. No candidate will obtain a place in the class list unless she satisfies the examiner in (1), together with any one of the special subjects, or in (2), together with (6).

(For further information see The Student's Guide, Part VIII.)

## THE HISTORICAL TRIPOS.

The examination is held toward the end of the Easter term in each year, and is not divided into parts. No candidate for this tripos will be admitted earlier than in her eighth or later than in her tenth term, unless she has already taken honors in another tripos.

This examination is as follows: (1) The constitutional history of England; two papers. (2) The economic history of England (with questions involving some knowledge of economic theory); one paper. (3) Political science. Questions are set bearing on the inductive study of political institutions. A knowledge of the constitutions of ancient Athens, Sparta, and Rome, as well as of more modern constitutions, is required; one paper. (4) Special Subject I;<sup>1</sup> two papers. (5) Special Subject II,<sup>1</sup> two papers, or political economy, one paper. General theory of law and government and the principles of international law; one paper. (6) Subjects for essays; one paper. (7) Subjects for essays on English history; one paper.

(For further information see *The Student's Guide*, Part XI.)

#### THE MEDIEVAL AND MODERN LANGUAGES TRIPOS.

The examination is held in the Easter term of each year. It is divided into six sections:<sup>2</sup>

- A. English language and literature.
- B. English language, with Gothic, Icelandic, and Anglo-French.
- C. French language and literature.
- D. French language, with Provençal and Italian, or instead of Italian, Spanish, and Portuguese.
- E. German language and literature.
- F. German language, with Gothic and Old Saxon.

No candidate will be admitted earlier than in her fifth term or later than in her tenth, unless she has previously obtained honors in this or some other tripos, in which case she may be admitted in her thirteenth term.

Candidates must take two, but not more than two, of the sections, unless they have previously obtained honors in this or any other tripos, in which case they may offer themselves for examination in one section only, or in two sections, but not in more than two.

There are six papers in each section.

Section A includes papers in old English and historical English grammar, and on the various periods of English literature, with special papers on Chaucer and Shakespeare.

Section B includes papers in old and middle English language, Gothic, Icelandic, and Anglo-French.

Section C includes French composition, papers in Old French, questions on historical French grammar, and questions on the various periods of French literature.

Section D includes papers in Romance philology, in Old French, Provençal, and old and modern Italian, or old and modern Spanish and Portuguese.

Section E includes German composition, papers in old and modern High German, questions on historical German grammar, and questions on the various periods of German literature.

Section F includes papers in Teutonic philology, in old and middle High German, in Gothic, Old Saxon, and middle Low German.

#### THE LAW TRIPOS.

The two parts of this examination are held in the Easter term of each year. No student may be a candidate for Part I earlier than in her fifth term of residence or later than in her tenth, unless honors in another tripos have been already taken. For Part II no student may be a candidate earlier than in her eighth term or later than in her thirteenth. It is possible therefore to take both parts in the same year.

Part I will consist of seven papers on the following subjects: (1) General jurisprudence. (2) History and general principles of Roman law. (3 and 4) The institutes

<sup>1</sup> To be selected by the students, four periods being offered for choice. With each special subject some knowledge of original authorities will be required.

<sup>2</sup> This scheme will come into force in 1894.

of Gaius and Justinian, with a selected portion of the Digest. (5) English constitutional law and history. (6) Public international law. (7) Essays and problems.

Part II will consist of six papers on the following subjects: (1 and 2) The English law of real and personal property. (3 and 4) The English law of contract and tort, with the equitable principles applicable to these subjects. (5) English criminal law and procedure and evidence. (6) Essays.

The board may limit any or all of the above-named subjects to a department or departments of the same, provided that they give notice of such limitation two years before the time at which examination in the subjects so limited is to take place.

(For further details see The Student's Guide, Part V.)

#### THE ORIENTAL LANGUAGES TRIPOS.

The subjects are Hebrew, Aramaic (eastern and western), Arabic, Sanskrit, Persian, and the comparative grammars of the Semitic and Indo-European languages.

The examination in each of these languages is divided into two sections. In the first section it is of a more elementary character.

In the first section two papers are set in each of the languages except Sanskrit. In Sanskrit there are three papers. A paper is also set on the comparative grammar of the Indo-European languages. For the second section there are four papers in Sanskrit and three in each of the other languages.

No candidate shall be placed in Class I who has not exhibited a competent knowledge of two languages, or of one language together with elementary sections of two other languages, or of either Sanskrit or Persian together with the comparative grammar of the Indo-European languages. If both the languages are Semitic, a knowledge of the comparative grammar of the Semitic languages will be required.

#### THE THEOLOGICAL TRIPOS.

This examination consists of two parts. The first part extends over four days, the second over eight days. Both parts may be taken consecutively in the same year, or in separate years. It is taken not earlier than the eighth nor later than the twelfth term of residence, or, supposing another tripos has already been taken, one or two years may elapse between this and the examination in theology.

For Part I the subjects are: (1) Old Testament, a general paper. (2) New Testament, a general paper. (3) The book of Genesis, or some other specified portion of the historical books of the Old Testament, in Hebrew. (4) Passages for translation from the historical books of the Old Testament generally, with questions on Hebrew grammar; easy Hebrew composition. (5) The Gospels in Greek, with special reference to some selected Gospel. (6) The Acts, Epistles, and Apocalypse in Greek, with special reference to some selected portion. (7) History of the Church to the death of Leo the Great. (8) History of Christian doctrine to the close of the Council of Chalcedon.

For Part II they are: (1) Old Testament; the book of Isaiah in Hebrew. (2) Selected portions of poetical and prophetic books in Hebrew and the Septuagint, including always some portion of the Psalms. (3) Passages of a translation from the Old Testament generally; Hebrew composition.

*II. New Testament.*—(1) A selected Gospel, with some patristic commentary and the Latin versions. (2) A selected Epistle, with some patristic commentary and the Latin versions. (3) New Testament, generally with Greek composition.

*III. History and literature.*—(1) Selections from the Apocrypha, Apocryphal literature; Philo and Josephus. (2) Selected Greek and Latin ecclesiastical writings. (3) A historical period between the death of Leo the Great and the taking of Constantinople, with selected illustrative documents. (4) A historical period between the taking of Constantinople and the present time, with selected illustrative documents.

*IV. Dogmatics and liturgiology.*—(1) History and development of a selected doctrine. (2) A subject from modern theology in connection with original documents.

- (3) History of Christian worship, with special reference to selected ancient liturgies and service books, and (*b*) the history and contents of the Book of Common Prayer.  
 (4) An essay on some theological question arising out of the subjects of the section.

The mechanical sciences tripos deals largely with practical work in mechanics. All the triposes have now been taken by women except the mechanical sciences and the oriental languages. For the latter one lady is now preparing.

#### IV. METHODS OF STUDY.

One of the results peculiar to the mingled authority of university and college is a division of labor in the matter of teaching. There are university lectures, intercollegiate lectures, and college lectures, and all these may be supplemented by private coaching. Hence it is not easy to lay down the exact position of women in regard to the instruction they can receive at Cambridge. Generally speaking, however—

(1) University lectures are free and open to all comers of both sexes. These lectures do not play a large part in preparation for the triposes; often they do not even deal with the special subjects required. They are largely attended by graduates when they deal with advanced work on original lines; at other times they may incline to be popular, as was often the case with the late Sir John Seeley. They generally represent the best university thought on the subject dealt with; but as they are by no means sure to “pay” in the tripos, they seldom attract a large undergraduate audience. Yet this varies with the subject and with the professor, and it is not possible to make any general statement on the subject.

(2) Intercollegiate lectures are given at the various colleges, and members of other colleges are admitted to them, usually on payment of a fee. These lectures are usually in preparation for one or other of the examinations. Women obtain admission to a good many of these lectures, some colleges according the permission freely, others on special conditions, and some withholding it altogether. As each college has its own internal government, the authority who can give this permission is not always the same. Sometimes the lecturer has power to give it, at others the tutors of the college have to be consulted. As a rule, when permission has once been granted it is not withdrawn, and the particular college is regarded as one where women may attend the lectures. It is important to remember that these colleges are places of residence for male students as well as places of instruction, and that therefore attendance here is not at all the same thing as the common meeting of men and women in some lecture room on neutral ground. Some colleges require the lady students to be accompanied by a chaperon, but as a rule it is considered enough to stipulate that one lady student should never come alone, but that there should be two or more present.

(3) College lectures are for the members of the college only, and often partake of the nature of a private class. Much of the work done at Girton and Newnham is of this character.

(4) Coaching is generally a matter of private arrangement, but the women's colleges include some coaching in their inclusive fees. The amount required depends on the nature of the study. In classics a certain amount of the work is always done in this way—e. g., prose and verse, correction of unseen translation, and generally some time is given to the solution of difficulties in the student's private reading. In mathematics coaching plays a large part; indeed, certain coaches who succeed in turning out many high wranglers (first class in the mathematical tripos) among their pupils become celebrities.

In natural science and history there is less of this work, and the lecture room plays a greater part. But here too there is nearly always some private correction of papers and general direction of work. There is much less lecture-room and recitation work than in America, and more independent work by the students themselves. Hence the necessity of having some one generally to guide and direct the work.

Girton supplies all the coaching required by the student for an inclusive fee. Newnham generally supplies as much as seems advisable, but a student wishing extra coaching pays for it herself. The fee is usually 10s. 6d. an hour.

*A. Mathematics.*—In connection with the special work required for the mathematical tripos, Miss Collier, mathematical lecturer at Newnham, makes the following statements:

#### MATHEMATICAL TRIPOS.

The work for this tripos, as for the classical, is far more than can be covered in a three-years course. The moderately well-prepared student, before coming up, has usually studied the elements of geometry, algebra, trigonometry, conic sections (treated both geometrically and analytically), statics, and dynamics. Such a student could not hope to acquire a knowledge of all the many subjects embraced by the tripos examination, for in addition to more advanced work in the subjects above mentioned these comprise theory of equations, differential and integral calculus, differential equations, spherical trigonometry, astronomy, optics, hydrostatics, heat, electricity, Newton's Principia, Sections I and II, solid geometry, dynamics of a particle, rigid dynamics, and analytical statics. In all these subjects the student is expected to show very considerable skill in effecting the solution of problems; much time and labor is devoted to the development of her powers in this direction. To quote a well-known mathematical coach, "In Cambridge mathematics is studied as an art, and not, as elsewhere, merely as a science."

As a rule the students read with a coach, either alone or in small classes of two or three. They usually have three lessons a week of an hour each. Occasionally they attend courses of lectures given by university professors and lecturers.

A knowledge of a limited number of these subjects is sufficient to obtain a second class. Those who are working for a third class would only attempt to read the following subjects: Geometry, algebra, trigonometry, conic sections, statics, dynamics, astronomy, optics, hydrostatics, Newton's Principia, heat, electricity, differential and integral calculus.

*B. Classics.*—With the growth of the colleges the number of women reading classics has increased, and the development of the classical teaching in girls' schools has removed in a great measure one of the

former difficulties in the way of organization at Cambridge, which consisted in the great difference in the amount of knowledge possessed by those who came up.

It is now usual to dispense with elementary classes in arranging the work for classical students. The nominal course of study now consists of a class for Latin reading, a class for Greek reading, individual teaching in Latin and Greek prose and verse, and in unseen translation from both languages, and courses of lectures on history, grammar, and philology. A great part of the reading is done by the students alone, and they take their difficulties to the lecturer.

The greater part of the teaching is given by members of the university, several of the best classical lecturers at Cambridge being on the staff of the women's colleges. Each of the colleges has also two resident classical lecturers, and one or two other lady lecturers are on the staff. In each case these are old students of the college who have distinguished themselves in the tripos. Courses of lectures in history and grammar are arranged for as they are required, but the teaching provided by the university and colleges of Cambridge is usually available in these subjects.

The above applies to the preparation for Part I of the tripos, but women often go on to Part II; indeed, it is really more common among women than among men to read for the specialized groups which make up Part II.

Courses of lectures in ancient philosophy, philology, history, and archæology are arranged by the university and colleges of Cambridge, and these are in most all cases open to women; what further work is required is provided by private coaching.

*C. Natural science.*—The following is a statement by Miss Greenwood, lecturer at Newnham College:

#### WORK IN NATURAL SCIENCES AMONG WOMEN IN THE UNIVERSITY OF CAMBRIDGE.

The work in natural sciences in the University of Cambridge falls readily into two main divisions. Teaching in theory is given largely by means of lectures, of which there may be audiences ranging in number from ten to more than two hundred, while practical work takes the form of demonstrations. Since practical work is organized in connection with almost all the courses of lectures (for we regard it as of extreme importance), there are some laboratories in which the classes are very large; in this case demonstrators are provided in such numbers that, roughly speaking, one demonstrator has to direct not more than twenty men. The lectures given by professors, readers, or lecturers of the university are thrown open to the students of Newnham and Girton by individual courtesy; the demonstrations are open in some cases, but women are not admitted where there is great pressure for room. This pressure is felt most in elementary work and perhaps in biological subjects, for the majority of the men who read natural sciences in Cambridge are taking medical degrees, in which of course biological work is involved, while the elementary classes are naturally larger than those which provide advanced work.

As an instance of unusually free admission I may quote the study of physics, in which by the kindness of Prof. J. J. Thomson, men and women are received at the lectures and in laboratories on equal terms throughout their course. The physiological courses furnish an example of division in elementary work; thus, Prof.

Michael Foster's lectures are open to women; his elementary practical classes are closed; while in advanced physiology, where the numbers are fewer, lectures and laboratories are open alike. In chemistry, too, no practical teaching is offered to women by the university, but they are kindly admitted by Mr. Pattison Muir to the advanced laboratory of Gonville and Caius College.

To meet the need thus created by the numbers of men students we have laboratories for the use of women, managed and staffed by former students of the women's colleges. The Balfour laboratory (named after Prof. F. M. Balfour and given to Newnham College by his sisters) is used by students of Newnham and Girton alike, and here all the practical work for the elementary courses in biology, physiology, morphology, and botany is done, with revision and advanced work when they are needed. Here, too, there are special science classes when the teaching available from the university is temporarily inadequate or unsuitable, and here we have some students (possibly corresponding to American post-graduates) and demonstrators carrying on research. In the same way there is provision for practical chemistry; each women's college has a chemical laboratory, the teachers at each being almost entirely women. We feel that the existence of separate chemical laboratories at Newnham and Girton is rather accidental than advisable, and that the joint work which is done at the Balfour laboratory gains from the fact that the classes are fed by students of both colleges and that there are greater numbers from which demonstrators and the students who wish to carry on research may spring.

Individual instruction and guidance, though less necessary in the natural sciences than in classical and mathematical work, is of course most valuable, and this is given largely by the demonstrators of the women's laboratories, who are often also resident lecturers of Newnham or Girton.

I may add that this arrangement of work, the apparently accidental result of circumstances, is, on the whole, satisfactory. I believe that in the first stages of a subject, at any rate, women are the best teachers for women, and that a lecturer of one of our colleges ought, after association with the students when they are beginning their courses, to be the more efficient and sympathetic guide for them throughout. But I think, too, that the change of atmosphere and diversity of teaching which are gained by the admission of women students to advanced classes taught and organized by men are, from our point of view, invaluable.

There is no need for special comment on the work for the other tripos. In modern languages there are always university and other lectures dealing with the examination subjects, and a certain amount of work is done in college in composition in foreign languages, setting and correcting of papers, lectures, etc. Hitherto the number of women taking this tripos has been in excess of the men, and there has been no difficulty whatever in providing for the students of Girton and Newnham the same teaching in these subjects that is given to members of the university. Students who specialize in a foreign language ought to have a good conversational knowledge of that language before coming up, and it is very advisable to spend one at least of the long vacations in the country, learning the language on the spot.

In history no large amount of preliminary knowledge is expected. What is most helpful is a good knowledge of general history and sufficient acquaintance with Latin and modern languages to enable students to use original sources when required.

In moral sciences a part of the work is done in Cambridge and part, requiring more individual attention, in small classes or private coaching.

Law, theology, and oriental languages have as yet attracted few women, but they can obtain instruction in these subjects if they desire it.

#### V. GIRTON COLLEGE.

Girton College was started from the first with a definite aim, which has never been left out of sight, viz, to give women a university training similar to that given to men, and to obtain for them the degrees of the University of Cambridge. The unity of aim is represented in the unity of the building. When it was only possible to build a very small piece, it was arranged that that piece should form part of a larger whole, and thus each successive addition has further developed the idea in the architect's mind, but not introduced any new disturbing elements. The college now contains rooms for the mistress, vice-mistress, junior bursar, 6 resident lecturers, 105 students, 12 lecture rooms, library, reading room, hall, chemical laboratory, and other accommodations.

The general appearance of the college is very impressive, and conveys an impression of size greater than the reality. This is due to the long corridors, on only one side of which are rooms, while on the other there are rows of windows, which contribute to the appearance of height and light, so characteristic of the whole building. Girton stands in the midst of its own grounds,  $1\frac{1}{2}$  miles from Cambridge and from the college tower. The view extends over the flat country for many, many miles. The grounds are carefully kept, Miss Welsh, the mistress, being an expert in horticulture, and herself directing the laying out of the walks and planting of shrubs. Outdoor life plays a great part at Girton. There are teas on the lawn, reading parties under the trees, country walks to the Nadingley woods, tennis and hockey; and for the less energetic there is the "Woodland Walk" for a constitutional, which winds among shrubs and flowers all round the college grounds, and just a mile in length.

The buildings are in three stories, known respectively as bottom, middle, and top corridor. Every student has two rooms of her own, a study and a bedroom, except on the top corridor, where there are seven large rooms with a part curtained off, the result being practically much the same. As a rule there are folding doors connecting the two rooms, but each can be approached separately from the outside. The list of furniture supplied by the college is as follows:

*Sitting room.*—Carpet, curtains or blinds, fender, fire irons and guard, coal scuttle and scoop, hearth brush, writing table with drawers, small side table, cupboard with lock, easy-chair, two cane chairs.

*Bedroom.*—Carpet and curtains, bedstead and bedding, chest of drawers, dressing table and glass, washing stand and toilet case, bath, pail and hot water can, towel rack, linen basket, cane chair, and curtain linen.

This makes a good nucleus, and many students add a sofa or another easy-chair or two, some fancy tables, and, of course, their own pictures

and ornaments. Some very luxurious girls entirely refurnish and decorate their rooms; on the other hand, those who have to keep down expenses can very well manage with what the college supplies. Wild flowers, leaves, berries, etc., are easily obtained for decoration, and early in the May term all the rooms are gay and fragrant with cowslips and hawthorn. Again, the rooms are prettily built, the windows large and light, that they may lend themselves easily to beautifying, and it is hardly possible to find a study that is not bright and attractive. On the bottom corridor are the dining hall, library, reading room, 13 lecture rooms, and the laboratory, besides a number of sets of students' rooms. The dining hall has been enlarged of late years and now easily accommodates all the students. Here are hung portraits of some of the benefactors of the college—the late Lady Stanley of Alderney, Miss Emily Davies, and Madame Bodichon. At one end of the room is the high table where the mistress and lecturers sit. The students sit at four long tables. All dine together at 6.30. Breakfast is on the table from 8 to 9, and from 12 to 3 each student goes in and takes her meals when she pleases between those hours, helping herself to the dishes on the side tables. Dinner is the only formal meal. Tea is taken to the students' rooms in the afternoon; and in the evening a bag with a roll and butter and the requisites for making tea, coffee, or cocoa is taken to each of the rooms. Every one takes this little repast when she pleases. It is usual to carry the bag to a friend's room and have a little sociable meal instead of a solitary one. The hall serves other purposes besides that of dining. The Sunday evening services are held here, as also the college concerts and the larger meetings of the debating society. It is a room of fine proportions and looks extremely well at festive gatherings, e. g., the Old Students' dinner, which takes place here once in two years.

The library is a very beautiful room, with cosy window seats and delightful little nooks by the spacious fireplaces. It contains about 6,000 volumes, not quite as many as might be expected from the general equipment of the college, but it is gradually being improved. Among the treasures are complete editions of Tennyson and Ruskin, presented by the authors. The college also owns the library of Mrs. Mary Somerville, but this is kept in another room and held in very special honor.

The reading room is also a fine room, with large bay windows and cosy window seats. It contains a large assortment of papers and magazines, some provided by the college and others bought by subscription among the students. Here hang some charming drawings by Miss Alexander, presented to the college by Mr. Ruskin; and here, too, are the students' notice boards, with a bewildering list of announcements concerning college societies, things lost and found, objects for sale, offers to share cabs to Cambridge, etc.

The lecture rooms are small, as they are not arranged for large lectures, but rather for private coaching or small classes. They are, however, very pretty and comfortable.

In a small room on the ground floor the Girton antiquities are kept. This is a very interesting collection of old Saxon and Roman pottery, glass, ornaments, etc., found in the grounds of the college. It is assumed that the place may once have been used as a burying ground, and it is known that the very straight road between Cambridge and Huntingdon on which Girton is situated once formed part of a Roman road, the *Via Devana*.

Above the library are the mistress's rooms, which are large and handsome. The college also has a small hospital, used for isolating infectious patients, and a gymnasium, which, however, is by no means adequate either in size or equipment. Regular gymnastic instruction has of late been provided, but outdoor games, walks, bicycling, etc., are far more popular with English girls than systematic gymnastics under medical or professorial direction.

The rules to be observed by the students are the following:

*Girton College—daily routine.*—8 a. m., prayers; 8.15 to 9, breakfast; 12 to 3 p. m., luncheon; 6 p. m., dinner.

The lectures are for the most part given in the afternoon.

Students are required to enter their names on the marking roll at some time between the hours of 8 a. m. and 9 a. m., 12 and 3 p. m., and 6 and 7 p. m. Every student is required to be present at marking and at the lectures belonging to her course, except when leave of absence has been granted by the mistress.

Students may have tea in their rooms at 4 o'clock, and after dinner up to 9 o'clock. Students who require wine may supply themselves either from home or through the housekeeper.

The college gates are open at 7 a. m.; in winter they are closed at 6 p. m.; in summer at dusk. Except within these hours students may not be out beyond the grounds. Students may accept invitations from families, but are not at liberty to accept other invitations or pay visits of any sort to college rooms without special permission. They must not be out of the college later than 11 p. m., and must not accept evening invitations for more than, on an average, once a week in any one term. A student asking for leave of absence must mention the place to which she proposes to go. Subject to the above provisions, students are required to be within doors at 10 p. m., when the house is closed.

A covered building is provided for games and gymnastics, and facilities are given for out-of-door games. Students have also the use of a reading room and pianos. Subject to such regulations as may be prescribed by the mistress, students may invite friends to join in games in the college grounds and in the gymnasium, and may entertain friends at luncheon or dinner in hall, or at tea in their own rooms, at a fixed charge. If guests are invited to remain in the college after the gates are closed, the time must not extend beyond the time for house locking-up.

In the foregoing regulations the term "friends" or "guests" applies to ladies only, except in the case of a parent or guardian. A public room is provided in which students may see visitors up to 6 p. m., subject to the approval of the mistress. Students are not expected to receive the same visitor more than once in each term, except in the case of ladies or a parent or guardian.

Students are required to be in residence on the day that each term begins, except when leave of absence has been obtained from the mistress. If leave is applied for

on the ground of health, the application must be accompanied by a medical certificate. Students are required to inform the mistress before returning to the college at the beginning of term of any infectious illness which may have appeared in their homes or with which they may otherwise have come in contact during the vacation. Students who desire to reside at Cambridge during any part of the vacations must obtain the sanction of the mistress.

Admission to the college is by examination. The following are the regulations:

#### ENTRANCE EXAMINATION.

Examinations are held in London in March and June. A fee of £1 is charged. Forms of entry may be obtained from the secretary. Application should be made for these forms in time to return them, filled up, with the examination fee, not later than January 31 for the March examination and April 30 for the June examination.

The examination is conducted in writing. Every candidate is required to satisfy the examiners in—

*Part I, Preliminary.*—(1) The principles and practice of arithmetic. (2) English grammar and composition, with questions on the construction of sentences and meanings of words. (3) Physical and political geography. (4) English history. Candidates will be examined in March and June, 1894, upon the period from the Restoration to the death of Queen Anne. A general knowledge of the leading facts of English history is also required. (5) Scripture history.<sup>1</sup> (The New Testament.)

*Part II, Optional subjects.*—Every candidate is also required to satisfy the examiners in two of the following subjects: (1) Latin; easy passages for translation from Latin into English, and easy English sentences for translation into Latin, with questions on grammar. (2) Greek; an easy passage of Attic Greek for translation into English, and easy English sentences for translation into Greek, with questions on grammar. (3) French. (4) German. (5) Elementary mathematics, Euclid, Books I, II, and algebra up to quadratic equations, inclusive.

A certificate of having passed one of the following examinations is accepted in place of the entrance examination as qualifying for admission:

- (1) The matriculation examination of the University of London.
- (2) The Cambridge higher local examination, provided that Group B is included.
- (3) The examination for higher certificates of the Oxford and Cambridge schools examination board.
- (4 and 5) The Cambridge or the Oxford local examination for senior students, provided that a language is included.
- (6) Three sections, including A and B, or Section A and two languages in Section B of the Durham local examination for senior students.
- (7) The preliminary examination of the Victoria University.
- (8) The Edinburgh senior local examination, provided that the department of languages is included.
- (9) The Glasgow senior local examination, provided that one of the optional subjects selected is taken from Department F.
- (10) The Aberdeen senior local examination, provided that Department A is taken.
- (11) The St. Andrews senior local examination, provided that two languages other than English, or mathematics and one language other than English, are included.
- (12) The leaving certificates examinations of the Scotch education department, provided that the candidate passes at one examination in four of the following subjects: (1) Elementary mathematics; (2) English, and (3 and 4) any two of the following languages: Latin, Greek, French, German.
- (13) The matriculation examination of the Royal University of Ireland.

<sup>1</sup> In case of objection, this subject is not required; but notice must be given beforehand if the paper is not to be taken.

(14) The senior grade of the Irish intermediate examination if the candidate has passed in five of the subjects 1-10, provided that mathematics, English, and one other language are included. A candidate who has passed in arithmetic in the middle grade may substitute some other subject for mathematics.

(15) The Sydney senior local examination, provided that Sections I, III, IV, IX, one of the sections in Group II, and one, in addition to arithmetic, in Group II or III are taken.

(16) The entrance examination of the University of Calcutta.

(17) The matriculation examination of the University of Bombay.

From the long list of substitutes allowed, it is evident that which the college desires is some security that candidates are equal to the work rather than the certificate of one particular examination. In one or two cases American students have been admitted without examination on supplying satisfactory references from their own college.

The college course occupies three years, half of each year being spent in residence. The charge for board, lodging, and instruction is £35 (\$175) per term, paid in advance. This sum covers the whole of the university and college charges. It includes lectures, coaching, examination fees, cabs to lectures in Cambridge and to examinations, the subscription to the Cambridge University Musical Society, and cabs to and from the practices. It is important to remember that this is an inclusive fee, and that any charge incurred for a student in connection with laboratories or lectures in Cambridge is covered by the college. There is even a little set of rooms hired by the college in Cambridge for the use of its students, including reading room, dining room, and waiting room. Students have free access to this; and those whose work keeps them in town till the afternoon have lunch provided free of charge. The student pays nothing herself except laundry, books, subscriptions (which are optional), and her private hospitalities. An economical student can easily do all this for £5 (\$25) a term, though she can, if she pleases, spend much more on it.

Students who desire to continue their studies at Cambridge during the long vacation may reside at the college during July and August at a charge varying in accordance with the number of weeks for which they may wish to stay. It is not, however, necessary to reside; sometimes students work with their tutors by correspondence during this time. At others they retire to some country place for a course of private reading. So much of the Cambridge work is done by the student independently that a couple of months' work without lectures is often very helpful.

A long list of scholarships is offered by the college, and these are eagerly contended for.

#### SCHOLARSHIP EXAMINATIONS.

Candidates for scholarships must have passed an examination qualifying for admission to the college, such examination including Latin and elementary mathematics. If not previously qualified, candidates may take the required subjects at the time of competing for scholarships.

Scholarships and exhibitions will be awarded for proficiency in any one of the following groups, credit being given for knowledge of some one subject taken from another group.

*I. Classics.*—Latin, Greek.

*II. Mathematics.*—Euclid, Books I–IV, VI, and XI, Props. 1–21, and geometrical conics, algebra and trigonometry, elementary mechanics, and analytical conics.

*III. Natural science.*—Chemistry; physics, viz, heat, mechanics, light, electricity, and magnetism; botany.

Every candidate for a scholarship in this group must take chemistry, heat, and mechanics, and may take in addition one of the three remaining subjects.

The examination will include practical work in chemistry, physics, and botany.

*IV. Modern languages.*—French, German, Italian.

Every candidate for a scholarship in this group must take French and German, and may take in addition Italian.

*Scholarships and exhibitions to be awarded on the scholarship examinations.*—The Sir Francis Goldsmid Foundation Scholarship, of the annual value of £45.

Two scholarships of the annual value of £60 and £40, respectively, and other scholarships offered by the college.

The Clothworkers' Exhibition, of the annual value of £60, offered to candidates whose means are inadequate to cover the whole cost of their college education, preference being given to those engaged in or preparing for the profession of teaching.

The tenure of the scholarships and exhibitions is for three years, beginning in October, 1895, with, in the case of the Clothworkers' Exhibition, one additional term. Power is reserved to withhold any of the scholarships offered by the college, or to substitute for them other scholarships of less value, if candidates of sufficient merit do not present themselves.

*Gilechrist scholarship.*—A scholarship of £50 a year for three years, given by the Gilechrist trustees, for women desirous of studying at either Girton or Newnham College in preparation for one of the tripos examinations, will be awarded, provided that a satisfactory degree of proficiency is shown, on the results of the Cambridge higher local examinations, 1895, in one or other of the following groups:

B. Two languages, of which either Latin or Greek shall be one.

C. Mathematics.

E. Physical and natural science.

Candidates must either have obtained an honor certificate in the Cambridge senior local examination, or a higher certificate of the Oxford and Cambridge schools examination board, with distinction in at least one subject, or at the time of the award be entitled to a certificate in the Cambridge higher local examination, or have satisfied the examiners in arithmetic and obtained a first or second class in two groups of that examination.

*Oxford and Cambridge schools examination.*—Two scholarships, each of the value of £30 a year for three years, will be offered on the examination for higher certificates, to be held in July, 1895, preference being given to candidates showing proficiency in classics, mathematics, or natural science. The successful candidates will be required to commence residence in October, 1895, or later, as the college may determine. The scholarships will not be awarded unless a sufficient degree of proficiency is shown.

*Cambridge senior local examination.*—Two scholarships, each of the value of £30 a year for three years, will be offered to the best candidates among the senior girls in the examination to be held in December, 1894. The successful candidates will be required to commence residence in October, 1895, or later, as the college may determine.

Any of the above scholarships may be augmented in the case of a student requiring further assistance. Only one scholarship can be held by the same student. A student who has already obtained a scholarship awarded by the college will not receive the offer of a scholarship on any subsequent examination, unless it should be

one of superior value. The scholars will be required to read for a degree certificate in honors.

Scholars not only enjoy the emoluments of their scholarships but they also receive thereby a good deal of prestige. In the college hall the scholars precede the other students. The senior student of the college is that student of the fourth year who entered with the most important scholarship.

Girton College does not allow any out-students, nor does it as a rule admit women who do not wish to read for the ordinary university course. There are a few exceptions to this rule, and every such case will be considered on its own merits. Graduates of American colleges who do not wish to enter for a tripos will probably be allowed to reside for a year or two, choosing their own lectures with the advice of one of the resident lecturers. Girton students are not allowed to avail themselves of the privilege offered by the university of taking the higher local examination instead of the previous. In every respect they conform with the regulations laid down for members of the university in regard to residence and examinations; and this has been done ever since the college started at Hitchin. As the first students received no acknowledgment from the university, the college instituted a certificate called a degree certificate, to be conferred upon any student whose proficiency has been certified to the satisfaction of the college, according to the standard of any examinations qualifying for the B. A. degree of the University of Cambridge, providing that such student has fulfilled, so far as in the judgment of the college was practicable, all the conditions imposed for the time being by the university on candidates for degrees. This certificate is of less importance now that the university confers one; still the college continues to give it, and in fact the certificated students have certain rights and privileges, the chief being that of electing three representatives on the Girton College committee.

The mistress of Girton is Miss Welsh, one of the early students of Hitchin days. Until this Easter Miss Florence Ward acted as vicemistress and librarian. The honorary secretary is Miss Emily Davies, to whose energy and enthusiasm the college really owes its existence. The honorary secretary, secretary, and assistant secretary reside in London.

The lecturers resident in college are: Classics, Miss Jex-Blake and Miss Daniel; mathematics, Miss Meyer; moral science, Miss Constance Jones; mediæval and modern languages, Miss Hensley; history, Miss McArthur.

Much instruction is also given in the colleges by members of the university, and the students attend courses of professorial and inter-collegiate lectures in Cambridge. As the distance is rather great, the college provides cabs, known as "lecture flies," between 9 and 1 in the morning. These are frequent objects on the Huntington road, which

leads out to Girton. Lectures at Girton are often given in the afternoon, and the students then enjoy the luxury of a long morning for quiet study. The number of lectures attended is far fewer than at American colleges, and the amount of independent work done greater. Five or six hours of private work given to the field covered by a single lecture would not be considered at all; in some subjects this would certainly be below the average. Hence, except the obligation to attend all the lectures belonging to a course, a student is very free to arrange her own working time as she pleases, conforming, of course, to the regulations renewed from time to time by the students themselves, that at certain hours there shall be as little noise as possible in the college.

Social life at Girton is very fully developed. Many girls come there straight from school, and now for the first time have an opportunity of exercising hospitality, playing the hostess to their friends in college and in Cambridge. The Girton students receive a good deal of hospitality from families resident in Cambridge, and this is usually repaid on the occasion of college concerts, tennis matches, etc., when little private teas are given by the students to their own lady friends either before or after the festivity. For college parties Sunday afternoon is a favorite time, and little coffee parties are given after dinner, and sometimes teas at about 9 or 9.30, when the greater number stop work for the day. Then there are all the college societies, bewildering to the uninitiated. These are not secret societies, but associations for some definite object—some for work, some for play. In the first rank come the mathematics, classical, natural science, modern languages, and history clubs, at the meetings of which original papers are read and discussed. The lawn tennis, cricket, and hockey clubs are very important, for those games are very popular at Girton, and arrangements have to be made for tournaments, matches with Newnham, with Oxford, etc. There is a musical society, which generally arranges about two concerts a year. There is a debating society, which generally holds two debates a term, and once a year meets the Newnham society for the intercollegiate debate, and a junior debating society, for purposes of practice. The fire brigade is a very important institution, the impression prevailing that it may some day save the existence of the college. The pumps, however, are so small that not very much service could be done by them; however, the ladder practices and the competition in descending from a window by a self-made knot might prove useful in case of an emergency, which is, however, very unlikely to arise. The college has a gymnasium, but the equipment is very incomplete. A gymnastic instructor has lately been appointed. A bicycle club has been lately started. Here, as elsewhere in England, far more stress is laid on the exercise spontaneously taken in connection with walking, riding, outdoor games, etc., than on systematic gymnastic exercises under medical supervision. On the whole, English college girls are a healthy race, and their physique often improves a great deal during residence.

The college supports a magazine, the *Girton Review*, which appears once a term and reports all the chief events. It is very interesting to old students, though it does not contain much matter of general interest.

As regards the religious tendency of the college, it may be called undenominational. Prayers are read every morning by the mistress, and a religious service of the Church of England is held in the hall on Sunday evenings, but attendance is not in either case compulsory, and no question is ever asked by any of the authorities as to the place of worship attended by a student. The church of Girton village is not far off, and it is easy to attend one of the Cambridge churches or college chapels; but these matters are left entirely to the individual.

Like the other women's colleges, Girton contributes to the Women's University Settlement at Southwark. All subscribers have a right to be represented on the committee, and one of the members is elected by present students, another by past students. Working parties are sometimes arranged at Girton to make garments, which are sold very cheaply to the poor people in the neighborhood of the settlement.

#### VI. NEWNHAM COLLEGE.

Newnham College was incorporated in 1880 as the union of two associations. In October, 1871, Miss A. J. Clough took charge of a house in Cambridge for the benefit of students at a distance who wished to attend the association's lectures. As the number of students steadily increased, a hall was specially built for the purpose and put under the charge of Miss Clough. In 1879 a second hall was erected, under the name of North Hall, and the original one received the name of South Hall. A third hall—Clough Hall—was opened in 1880, and the others were then rechristened, respectively, Old Hall and Sidgwick Hall. In 1893 a new building, called the Pfeiffer Building, was added to the old hall. An archway was made as an approach to the grounds, around which all the buildings are grouped, and connection thus established between all the different parts of the building. The college now stands on a site of about  $8\frac{1}{2}$  acres; it consists of three halls, connected by covered corridors, and it contains accommodations for the principal and vice-principals, with resident lecturers, and about 150 students. The principal is Mrs. Henry Sidgwick; the vice-principals are Miss Helen Gladstone, Miss Jane Lee, and Miss Katherine Stephen. Each hall is under charge of one of the vice-principals, and in each is a dining hall, reading room, and other rooms for the common use of the students. The college hall is used as the dining hall of Clough Hall, and is large enough for the whole college to dine together at times. There is a small hospital, which can be isolated in case of infectious illness.

Each student has one room of her own. These vary in size a good deal. For some specially large ones or for sets of two extra fees are charged. The necessary furniture is provided by the college. There

is always a low couch, which can be turned into a sofa during the day. A very little curtaining turns one of these rooms into a pretty parlor. There is always an open fireplace and every room has a kettle. Fire and kettle play an important part in connection with the little hospitalities shown by students to their friends.

The ordinary fees are 25 guineas (\$130) a term. There are three terms in the year, from eight to nine weeks in length, the same residence being required as for members of the university. These fees include all charges for board, lodging, and the teaching required in preparation for the honor examinations. They do not include the laboratory fee, which is £1 1s., nor the fees for the university examinations. These are: On admission (1) to any undivided tripos, or (2) to the first part of any divided tripos, £5 (\$25); on admission to the second part of any divided tripos, £2 (\$10). After having passed any tripos examination, an admission to a second tripos, £2. The fee for each part of the previous examination is £1.

The complete course of study at Newnham College involves three years' residence and preparation for a tripos examination.

Students are not admitted under the age of 18 except in special cases. They are required to give satisfactory references, and no student is permitted to come into residence without the approval of the principal.

Before admission an intending student must either pass the Newnham College entrance examination or an examination which is allowed as a substitute. These are the Cambridge higher local, Cambridge senior local, Oxford and Cambridge schools examination board (these are under special conditions), or the examinations for affiliation to the University of Cambridge.

The requirements are so chosen as to insure that a student will be able to pass the previous examination or one of the substitutes very soon after entrance.

There are some special cases in which students are admitted without examination.

(a) A candidate obtaining a scholarship is exempt from further entrance examination.

(b) In certain cases foreigners are exempt, provided they can show by certificates and recommendations from persons in authority that their knowledge is up to the requirements of the college. As the entrance examination is held in March, the college would not expect a student from a distance to present herself then if she did not enter till October. Each case would be considered separately, but it is safe to say that a graduate of one of the colleges recognized by the Association of Collegiate Alumnae would have little difficulty in obtaining admittance.

The following are the requirements for the entrance examination, which is held annually in March. There are four parts: (1) Arithmetic, Euclid, algebra; (2) French and German; (3) Latin; (4) Greek.

Candidates are required to pass in part 1, and in one at least of parts 2, 3, and 4.

In (1) there are 3 papers of two hours each.

In (2) there are 2 papers of two hours each, 1 in each language.

In (3) there is 1 paper of two hours.

In (4) there is 1 paper of two hours.

In 2, 3, and 4 passages are set for translation from the books set each year for the previous examination.

The college admits some women as out-students. These must be (a) women living with their parents or guardians in Cambridge, or (b) women not generally resident in Cambridge, who are bona fide students, and either over 30 years of age or unable to afford the cost of residence and accustomed to support themselves. Special cases are specially considered. These students are bound to reside in lodgings approved by the principal, and to conform to such rules as may be laid down for their guidance.

The regulations are as follows:

(a) The ordinary fee for out-students is £9 (\$45) a term. The fees are payable in advance. Out-students who are not working for Cambridge examinations pay a tutorial fee of £1 per term to the college, and pay their lecture fees separately.

(b) Each out-student is assigned to one of the halls.

(c) An out-student has the right to read in the library, and to dine in her hall once a week during the term time.

(d) Permission to reside as out-students will not in general be granted to holders of £50 scholarships, and permission will require to be renewed every year.

(e) Application for admission as out-students must be sent in not later than September 1. A good many scholarships are offered by the college, and these are of immense value to able students who could not themselves defray the expenses of their education. The following is the list and the conditions under which they are given:

#### SCHOLARSHIPS AND EXHIBITIONS.

The council of Newnham College offer the following scholarships for competition in the years 1894 and 1895:

(a) One of £50 a year, for three or for two years, founded by the late Mr. Stephen Winkworth.

(b) One of £50 a year, for two years, given by Professor Sidgwick.

(c) One of £50 a year, for three years, given by the Clothworkers' Company, to be held by a student whose means are inadequate to defray the cost of residence at Newnham College.

(d) One of £50 a year, for two years, given by the Drapers' Company, to be held by a student who is preparing for the profession of teaching.

(e) One of £50 a year, for two years, called the Cobden Scholarship, given by Mrs. Stephen Winkworth.

(f) The Mary Stevenson Scholarship of £35 for one year.

(g) One or more of £35 for one year.

The above scholarships will be awarded as follows:

At the classical scholarship examination to be held at Newnham College in March, 1895, one scholarship of £50 a year, for three or two years, will be awarded to the best candidate, provided that such candidate attains a standard satisfactory to the examiners.

At the Cambridge higher local examination in June, 1895, three scholarships of £50 a year, for two or three years, will be awarded either (1) for distinguished success in Group C; or (2) for success in two of the Groups A, B, C, D, E, H, provided that one of the two be B or C; or (3) for distinguished success in Group E.

Candidates for the scholarships to be awarded for success in Group E must pass in one or both of papers 2 and 3 (chemistry and physics). If they do not take 2, they must pass in elementary chemistry in paper 1 (the elementary paper), and if they do not take 3 they must pass in elementary physics in paper 1. They must take the laboratory examination at Cambridge in connection with any of the papers 3 to 7 which they wish to count toward the scholarship.

The Cobden Scholarship (*e*) will be awarded either (1) for distinguished success in Group D, including distinction in political economy, or (2) for distinguished success in Group II, together with distinction in political economy.

One or more smaller scholarships of £35 (*g*) may be awarded to candidates who have failed to obtain one of the larger scholarships in June, and one of these scholarships of £35 may be awarded for distinguished success in the Cambridge higher local examination in December.

The Mary Stevenson Scholarship (*f*) will be awarded for distinguished success in the Cambridge senior local examination held in December, 1894.

Candidates for entrance will be eligible for the scholarships offered in the higher local examination if they have either (*a*) passed in two groups of the higher local examination, one of these being B or C, and in arithmetic; or (*b*) gained honors in the senior local examination and passed in either Group B or Group C of the higher local examination. Candidates who have already resided as students for two or more terms will be eligible if they have fulfilled the conditions as to examinations required by the University before admission to a tripos examination.

In all the above examinations, if no candidates of sufficient merit present themselves, the scholarships may be diminished in value or withheld.

Generally speaking, scholarships tenable for three years will not be awarded to students who have resided for two or more terms at Newnham College, and scholarships tenable for two years will not be awarded to students who have resided for five or more terms at Newnham College. Scholarships will, however, be continued to students for a second, or for a second and a third year, if their circumstances make it important to them, provided that they are doing sufficiently advanced work and are making satisfactory progress.

Scholars are required to reside during the tenure of their scholarships; those elected before entrance are expected to begin residence in the October following their election, unless they have not then attained the age of 18, or unless they have obtained special permission to defer it for a year. A scholarship will only be awarded if the council is satisfied that the candidate's state of health is not such as to prevent her from profiting by a systematic course of study at Cambridge.

*The Goldsmiths' Scholarship.*—The Goldsmiths' Company offer for success in the Cambridge higher local examination to be held in June, 1895, a scholarship of £50 a year, tenable for three years at Newnham College, to a candidate whose means are inadequate to defray the cost of residence at the college. Candidates must send their names, together with a statement of circumstances, to Dr. Keynes, Syndicate Buildings, Cambridge.

No two of the above scholarships can be held at one time by the same person. Nor can any one be held with the Gilchrist or the Arthur Hugh Clough Scholarship.

Any candidate for a scholarship awarded by the council, signifying her wish not to receive the emoluments of the same, will, if successful, have the title and status of

a scholar without the emoluments; and any scholar signifying her wish not to receive the emoluments of her scholarship shall retain the title and status of a scholar.

Candidates for the scholarships awarded by the council in the local examinations are requested to give their names and addresses to the local secretary of their center during the week of the examination.

The council awarded some scholarships otherwise than by the above examinations to students who have begun residence and whose circumstances make it important to them. Information about all scholarships will be given by Miss Gladstone, Newnham College.

*Arthur Hugh Clough Scholarship.*—This scholarship has been founded by Mrs. Arthur Hugh Clough in memory of her husband. The scholarship, which is of the value of £40 a year, will be awarded annually to the best qualified candidate who has resided at Newnham College for three years and wishes to continue her studies there for a fourth year.

*Exhibitions.*—A certain number of exhibitions of five guineas a term are awarded to students resident in the college needing assistance, regard being had to intellectual qualifications, and a written statement of circumstances being required. The tripos fees of these exhibitioners may be paid by the college on the recommendation of the vice-principals. Exhibitions are tenable with scholarships.

*Loan Fund.*—There is a loan fund at the disposal of the college from which students of limited means may obtain help toward the payments of their fees. They will be expected to give adequate testimony respecting their intellectual qualifications and to make a statement of their circumstances.

Besides these mentioned above there are:

(1) A scholarship offered annually at the higher local for success in languages, mathematics, or science, to be held at either Girton or Newnham.

(2) A scholarship in memory of Professor Harkness, awarded triennially to a student of Girton or Newnham on the result of an examination in geology or palaeontology.

(3) Two studentships to enable women who have distinguished themselves in the tripos to continue their studies.

The following are the house rules for students:

Students are expected to consult the vice-principal before accepting invitations from friends, and also if they wish to make excursions in the neighborhood.

Students are expected to inform the vice-principal what place of worship they choose for regular attendance.

Students are expected to be at home, during the Michaelmas and Lent terms, at 6.30 p. m.; during the Easter term, at 8.30 p. m.; on Sundays, throughout the year, at 8.30 p. m.

Rules concerning domestic arrangements of the household are left entirely to the discretion of the vice-principals.

The arrangements in all the halls are very similar. These are the regulations for Sidgwick Hall. The "study hours" are those most convenient for work and during which most of the students are likely to be engaged in their studies; but no rules are laid down as to hours of work, exercise, etc. Every student uses her own discretion and works much or little, as she pleases; but if she were in danger of serious overwork the vice-principal would probably warn her against it, while on the other hand a very idle student might be requested to leave the college.

## HOUSE RULES, SIDGWICK HALL.

Students are requested to inform the vice-principal what place of worship they choose for regular attendance.

Students are expected to be at home, during the Michaelmas and Lent terms, at 6.30 p. m.; during the Easter term, at 8.30 p. m.; on Sundays, throughout the year, at 8.30 p. m.

On week days: Prayers will be at 8 a. m. Breakfast is immediately afterwards and is cleared away at 9. Any student requiring breakfast after 9 must get an order from Miss Gladstone. Miss Gladstone, Miss Tuke, or Miss Collier should be informed when any breakfast is taken upstairs. Luncheon at 12.30 and 1.15. Afternoon tea from 3 to 4.30. Dinner at 6.30; exact punctuality is expected. Evening tea at 7.45.

On Sundays: Breakfast at 9. Dinner at 1. If students are not likely to be home from church or chapel by 1, they should mention it to Miss Gladstone, and arrangements will be made for them. Tea at 5. Supper from 8 to 9.

The recognized hours of study are from 9 a. m. to 12.30; 3.30 to 6.30; 8 p. m. to 10 p. m. During these hours pianofortes and other musical instruments must not be played, and students are requested to avoid talking in the passages. All talking or other noises that might disturb those who wish to sleep should also be avoided after 11 p. m., and students are recommended to be in their rooms by that hour.

Nails may not be knocked into the walls except close by the ceiling. Drawing-pins may be used with very great care.

If wine or spirits are required they should be ordered through the housekeeper, and should not be kept in students' rooms without Miss Gladstone's permission.

No provisions can be supplied from the kitchen to students for teas in their rooms, except milk and butter. Notice must be given beforehand to the housekeeper when these will be required, and she will keep an account of the amount supplied, for students to pay at the end of each term.

Instruction is given partly by lectures delivered at Newnham College, partly by such lectures of the university and of the colleges as are open to students of the women's colleges.

The staff lecturers at Newnham are Miss A. B. Collier, Miss M. E. Rickett, and Miss P. G. Fawcett, mathematics; Miss E. M. Sharpley and Miss F. M. Stawell, classics; Miss M. Greenwood, Miss I. Freund, Miss E. R. Saunders, and Miss L. Sheldon, natural science; Miss A. Gardner, history; Miss J. Lee and Miss M. J. Tuke, modern languages.

Besides these, a number of members of the university lecture at Newnham, and the number of university and college lectures open to the students is very large.

Certain of the lectures of Newnham College, of which a list is published at the beginning of each term, are open to women, other than students of the college, who have attained the age of 17. Permission to attend them is required, and application for this should be made to Miss M. G. Kennedy (secretary). This permission, when once obtained, is valid for all subsequent courses of lectures, unless withdrawn by a special order of the council. The fee for the term, for each course, is from 1 to 2 guineas, according to the number of lectures delivered in a week. The first lecture of a course may be attended free of charge. The lists of lectures and tickets of admission are to be obtained from Messrs. Macmillan & Bowes, 1 Trinity street. Permission may similarly

be obtained to join the classes for practical work at the laboratories of the college, when these are not too large. The fees at the Balfour laboratory are 4 guineas a term for each class held three times a week and 3 guineas for other classes. The fees at the chemical laboratory are 4 guineas a term for each course. These fees are payable at the laboratories.

Here is the list of lectures for women in Cambridge, Lent term, 1895, to be delivered, generally speaking, at Sidgwick Hall, Newnham College:

| Subject.  | Lecturer.  | Place.  |
|---|--|---|
| Divinity <i>a</i> .....   | Miss Rickett.....  | Selwyn Gardens.<br>Clough Hall, Saturday, 4.30 p. m., beginning January 26. |
| Arithmetic <i>a</i> .....   | Miss McL. Smith.....   |   |
| English literature papers <i>a</i> .....                                    | Miss J. Kennedy.....   |   |
| Early English (for Group A) <i>a</i> .....                                  | Mr. Myers, Professor   |   |
| English literature <i>b</i> .....   | Raleigh, Professor<br>Jebb, Mr. L. Stephen, Mr. Ainger, etc. |   |
| English literature (Section A, mediæval and modern languages tripos, 1896). | Miss Earle.....  | Room C, Saturday, 10 a. m.  |
| French grammar and composition <i>c</i> .....                               | M. Boquel .....  | Room C, Wednesday, Friday, 4 p. m.  |
| French literature .....   | Mrs. Verrall .....   | Room B, Thursday, 12 m., Saturday, 11 a. m.                                 |
| German literature .....   | Dr. Breul.....   | Room C, Tuesday, Thursday, 11 a. m.   |
| Latin I, Cicero Orator .....  | Mr. Cook .....   | Room B, Wednesday, Saturday, 9 a. m.  |
| Latin II, Lucretius I and III. ....   | Mr. Wedd .....   | Room II, Tuesday, Thursday, 12 m.   |
| Latin III, Virgil Georgics (selections).                                    | Miss Stawell.....  | Room A, Tuesday, Thursday, 9 a. m.  |
| Latin IV (for Group B) and Latin prose composition.                         | .....do .....  | Room II, Monday, Wednesday, Friday, 5 p. m.                                 |
| Greek I, Thucydides VIII. ....  | Mr. Wyse.....  | Room B, Tuesday, Friday, 5 p. m.  |
| Greek II, Plato Theætetus .....   | Mr. Archer-Hind .....  | Room II, Monday, Wednesday, 12 m.   |
| Greek III, Demosthenes De Corona .....                                      | Miss Sharpley .....  | Room II, Monday, Wednesday, 9 a. m.   |
| Greek IV (for Group B) <i>a</i> .....                                       | .....do .....  | Room II, Tuesday, Thursday, 9 a. m.   |
| Greek translation papers .....  | Mr. Archer-Hind and Miss Sharpley.                           | Room A, Saturday, 12 m.   |
| Greek and Latin philology .....   | Mr. Moulton .....  | Room A, Wednesday, Friday, 4 p. m.  |
| Political economy .....   | Mrs. Marshall .....  | Room III, Tuesday, Thursday, 12 m.  |
| History of Greece (outlines), 431-146 B. C. ....                            | Miss Gardner.....  | Room B, Monday, Wednesday, 5 p. m.  |
| Papers in English history, 1509-1685 .....                                  | .....do .....  | Room B, Monday, 9 a. m.   |
| English constitutional history to 1485 ..                                   | Miss Bateson .....   | Room B, Tuesday, Thursday, 9 a. m.  |
| Electricity .....   | Miss Fawcett.....  | Room A, Tuesday, Friday, 12.15 p. m.  |
| Practical chemistry <i>d</i> .....  | Miss Freund.....   | Chemical laboratory, Monday, Wednesday, Friday, 11.15-1.15.                 |
| Elementary physics .....  | Miss Klaassen.....   | Balfour laboratory, Tuesday, Thursday, Saturday, 9 to 10 a. m.              |
| Morphology of vertebrates .....   | Miss Sheldon .....   | Balfour laboratory, Thursday, 11 a. m.                                      |
| Systematic botany .....   | Miss Saunders.....   | Balfour laboratory.   |

*a* These lectures will be given if required by a sufficient number of students. Apply immediately to Miss Gladstone.

*b* Full particulars of this course may be obtained from Messrs. Macmillan & Bowes, or from Miss Gladstone.

*c* Students attending this class should provide themselves with Random Exercises (Macmillan & Bowes) and Miss Austen's Persuasion.

*d* Women who are not students of Newnham College can only be admitted to the laboratory if there is room; they should apply immediately.

Small classes in mathematics will be formed. Women (who are not students of Newnham College) who wish to join them are desired to communicate with Miss Gladstone, Newnham College, as soon as possible.

Students preparing for logic and psychology in Group D should communicate at once with Miss Gladstone; students preparing for Group F are advised to attend Dr. Garrett's lectures on harmony. (See University Reporter.)

The lectures will begin, generally speaking, on Tuesday, January 15. It may be found necessary in some cases to alter the days and hours of lectures. If so, it will, if possible, be arranged at the first lecture of the course to be altered; any requests for alteration should be made at the first lecture.

Tickets of admission to these lectures (which should be given to the lecturer at the second lecture) are to be obtained from Macmillan & Bowes, 1 Trinity street, by any person who has attended these lectures in any past term or has obtained permission to attend them for the future. For this permission application should be made to Miss M. G. Kennedy, Selwyn Gardens. This permission when once obtained is valid for all subsequent courses of lectures unless it be withdrawn by a special order of the council.

For women who are not students of Newnham College the fee for each course of lectures delivered once a week is 1 guinea; for those twice a week,  $1\frac{1}{2}$  guineas, and for those three times a week, 2 guineas; and for the course in practical chemistry, 4 guineas. For students attending both courses of French lectures the fee is  $2\frac{1}{2}$  guineas. Information as to fees for mathematical classes may be obtained from Miss Gladstone. Any other deviation from the rule will be announced at the first lecture, which is free. The fee should be paid before the second lecture.

Strangers' tickets, each admitting to any single lecture, may be obtained by any person attending the lectures, on payment of 2s. 6d. for one ticket, or of 1 guinea for 9 tickets.

There are in the college 9 lecture and class rooms, and there is a chemical laboratory. In the town, close to the university laboratories and museums, is the chemical laboratory for biological and physical studies, of which the building and the site are a freehold of the college.

In the grounds is a small observatory, with an equatorially mounted telescope. An old student has been appointed to the post of curator.

The college library is in Old Hall. It contains about 8,000 volumes, and is carefully arranged for reference and well supplied with the books that are most commonly needed by the students.

Between the university and the college, it may be said that the Newnham students are amply provided with all they need for their studies.

At Newnham, as at Girton, clubs and societies flourish, and the aims of these are much the same in both colleges. The debating society plays a rather more important part here, and the debates are more distinctly regarded as special festivals. Some of the speaking is very good. There is also a political society, which, like the local parliaments so popular in this country, follows in its proceedings the rules of the House of Commons. The society meets every Monday, from 7 to 8 p. m., throughout the October and Lent terms. At the beginning of the college year a speaker, deputy speaker, and secretary are elected by a general meeting. There are three parties: Liberal, Unionist, and Conservative, and there are a few independents. The parties take it in turn to be in office, an amicable arrangement which, unfortunately, would not suit the original assembly. Their turn of office lasts one year. Each party has its leader, and the party in power has its ministry, chosen by the prime minister at the beginning of the year. This party introduces bills. Private members may bring forward motions between the division on the bill and the introduction of the next. This interest in politics seems somewhat peculiar to Newnham, but now that the part played by women in public affairs is increasing so rapidly in England, it is a most valuable training.

At Newnham, as at Girton, each tripos has its club, which meets two or three times a term. Newnham students also subscribe to the Women's University Settlement, and elect a representative on the committee.

There is a Sunday Society, which meets Sunday afternoons. At each meeting a paper is read on some religious or philosophical subject, or a biography of some great man is given. Hockey, fives, and tennis clubs also flourish.

Each hall has societies of its own, such as literary, Shakespeare, musical societies, etc.

Owing to its situation nearer to Cambridge, it is easier for Newnham students to take part in events of interest in the town; to attend the beautiful musical services at King's College Chapel, concerts, etc., and to pay visits in town. Still the center of interest lies in the college itself, with its opportunities for work, for social intercourse, outdoor life, and formation of life-long friendships. For women as for men students, the college comes first, and the university second; yet for both the horizon would be seriously narrowed, the stimulus greatly lessened, if they ever were to become separate institutions, instead of part of one great whole—the University of Cambridge.

#### VII. UNIVERSITY AND COLLEGE.

A peculiarity of the older English universities is the distinction between university and college. The university as a whole may be said to be divided into two parts, the college and the university proper. Each college is an entirely separate organization, as is the university proper, but it has a general oversight of the colleges. The college has buildings for residence for students, fellows, and lecturers, and the usual arrangement of these buildings is about a square called a quadrangle, or, popularly, "quad." At Cambridge these quadrangles are generally designated as courts, and when there are many each is designated by a special name, e. g., at Trinity there is the Fellows' Court, Vergill's Court, etc. There are 18 colleges for men at Cambridge, and each college has its own faculty, regulations, and characteristics. Some are renowned for scholarship, others for athletics; some take higher social position than others. Every college has its own chapel, dining hall, library, combination room (a sort of general meeting room for the fellows), and lecture rooms. Each college is like a small university inside the greater one, except that—and this is very important—it does not examine or grant degrees. College examinations are held generally once a year, but these are to test progress, and in no way affect the result of the final examinations. In matters of discipline the college and university divide the authority. Each college makes regulations for its own students, but there are certain general regulations laid down by the university which must be observed by all its members.

There are a certain number of students who are not attached to any

college, and are known as noncollegiates, but they are under a special board of direction and have to observe certain regulations.

The university is a body for government, for degree giving, and for the supplying of a certain number of instructors. The instructors of the university are professors and readers; their lectures are usually open to the public without fee. The government of the university is vested in a chancellor (at present the Duke of Devonshire), a vice-chancellor, elected from one of the heads of houses, and a senate, to which belong all doctors of divinity and masters of arts, law, and surgery, who keep their names on the register for a certain number of years.

It is very important to remember in connection with Girton and Newnham that their members are not only students of a woman's college, but also students at Cambridge. They live in the atmosphere of a great and ancient university and inherit its traditions. The course of work is that laid down by the university, the examinations are appointed and conducted by the university, but it is the individual college that admits them, supervises them, and makes arrangement for their residence. Much the same holds good for the men's colleges.

It is the graduate women to whom the university acts as a step-mother. As they have no degree, they have no manner of position in the university. Men who proceed to the degree of M. A. and keep their names on the books by payment of an annual sum, form part of the university senate, and thus share in the government of the university. This is a privilege Cambridge seems unwilling to grant her daughters, although women graduates of London, Victoria, Wales, and the Scotch universities are put in the same position as men. Cambridge will probably be very slow to make the change, but there are some concessions that might at once be granted to women. Chief of these is free admission to the university library. M. A.'s of the university have a right to read there when they please and to take out books. The most distinguished woman graduate can only get books if a man is kind enough to procure them for her, and only reads in the library on the same conditions as any other lady who has no connection with the university. The excuse is made that the library is very insufficiently housed and the rooms are not well adapted for students. Even male undergraduates are far from welcome, and are much restricted in their hours of reading. The rule is that they may use the library between 1 and 4, a time when they believe every undergraduate who respects himself will be engaged in some athletic exercise. There is, however, a provision that they may be admitted at other hours on presentation of a card which will be given them if armed by a letter from their tutor to the librarian.

For persons who are not members of the university the regulations say that they shall be required to fill up a form of application and to

present it to the syndicate, together with letters from two members of the senate certifying from personal knowledge that the applicant is a student of some specified subject, and is a fit and proper person to be admitted to the library for the said purpose. Applications accompanied by such letters of recommendation are considered by the syndicate at two successive meetings. Tickets of admission are not granted to persons under 21 years of age unless they are reading for a tripos examination.

The only concession allowed a student of Girton or Newnham is that, instead of making application under the above rule, she may present to the syndicate with her form of application a certificate signed by the principal of her college and countersigned by a member of the senate, stating that she is a student of such college, is reading for the tripos examination, is studying some specified subject, and is a fit and proper person to be admitted to the library for the purpose of study. If the application is approved a ticket is given, and for this, if for a duration of one year, the sum of £1 1s. must be paid.

As a matter of fact, any one who wishes to read for a serious purpose is sure to be admitted, but the process may be a tedious one. However, as every college has its own library, the university library is not really much needed by undergraduates, and the books are so arranged that it is not a convenient place for writing. It is chiefly used by M. A.'s who take books home and persons who wish to study some rare old manuscript or book that may not be taken out. It is one of the libraries to which publishers are bound to send a copy of every book published, and, considering the pressure on the space, this is a somewhat doubtful blessing.

For the museums and laboratories there are special arrangements, which are dealt with elsewhere. The great disadvantage of the position of women at Cambridge is that they are too much dependent on the kindness and helpfulness of individuals, and though this kindness and help are seldom wanting, yet, now that the number of women students is increasing so much, it would be of the greatest value to secure a few more rights, even at the sacrifice of some special privileges.

#### VIII.—THE RECORD OF TWENTY-FIVE YEARS.

It is now twenty-five years since women began to study at Cambridge, and it is possible after the lapse of time to draw some general conclusion as to the abilities of the female students, and to make some predictions as to the future. During these years no fewer than 669 women took honors in the tripos examinations, and of these 191 took mathematics and 165 classics, a sufficient proof that women have by no means shirked those studies on which the older universities so specially pride themselves. Still more remarkable is the fact that out of this number 136 were placed in the first class. This is nearly one-fifth of the whole number, and the proportion of second class is also large.

These statistics are of importance, because they prove, what it was at first very difficult to make English people believe, that women are quite as capable of severe and continuous study as men. With the exception of law (and here one was second), theology, and oriental languages, women have headed the class lists of every tripos. One of the most notable successes was that of Miss Traveth, who in the mathematical tripos was classed above the senior triangler. Miss Ramsey (now Mrs. Butler) headed the classical tripos list. Miss E. P. Hughes, principal of the Cambridge training college, headed the moral science list; one or two women have obtained first places in natural science. Miss Gardner (history lecturer at Newnham) headed the list in history, and in modern languages the superior successes of the women are so common as to be hardly a subject of remark. At first there was an impression—doubtless a correct one—that it was only specially gifted women who pursued these studies, but it is now becoming a very common thing for girls of not more than average abilities to proceed to college. Still the percentage of failures continues small, and the number of high classes so great that last year Newnham stood third of all the Cambridge colleges in its record of honors. Thus far the field is undoubtedly won.

As to the careers of students when they leave college there is among some people a feeling of disappointment. But this is due to the fact that professions in England are only slowly being opened to women, and that each opening is generally won by the struggle of one or two courageous women. This takes time. Among distinguished alumnae of Cambridge may be mentioned Prof. C. A. Scott, now at Bryn Mawr College; Miss Jane Harrison (on whom the University of St. Andrews has just conferred the honorary degree LL. D.), a brilliant and learned lecturer on Greek archæology and one of our first authorities on the mythology of vases; Miss Eugenia Sellers, who has also done good work in Greek archæology; Miss Annette Benson (M. D., of London), now senior physician to the Kama Hospital at Bombay, and Miss E. M. Anderson, Government inspector of workshops and factories. Very many hold important posts as head mistresses, assistant mistresses, and lecturers. Excellent work has been done both in science and history by old students of both colleges; some have taken up philanthropic work, and carry into it a knowledge and training that prove invaluable. Some pursue journalism or other literary work; a few have found posts at the Greenwich Observatory. Undoubtedly the majority take up teaching, and here their influence has brought about a complete revolution in the girls' schools. Many are married and pursuing no special occupation; but here, as in every position, the advantages of culture are felt. In fact, it may be said that while results hitherto have more than justified the hopes of the founders, they may confidently look forward to a far more brilliant future when all the still existing barriers have fallen.

## LODGING AND BOARDING.

The English lodging system is a plan of living that has been praised, by most people that have tried it, for its practical application of comfort and convenience to the needs of a short sojourn. The general plan is to rent a parlor and bedroom. The parlor serves as dining room also. The rooms are rented at a fixed price, and are cared for by the landlady. The food is purchased by the people who occupy the rooms, according to their own liking, is cooked by the landlady, and all the work of presenting it upon the table and caring for it in the house is done by her. One can have an expensive or inexpensive bill of fare, and can consult one's own tastes, which is of course a very important particular. If desired, the landlady will make the purchases for the people also, according to directions given her, and present the bill at the end of each week for the articles which she has purchased. People living in lodgings have, of course, a certain independence which is not found in other places. They are quite free from social obligations, and can choose their own hours and approximate the independence of entirely private life.

The expenses of this way of living vary, of course, with the situation and furnishing of the rooms and the tastes of those who employ it. In one case two rooms on the third floor of a dwelling house were taken. The situation was conveniently central; the parlor overlooked a small park and the bedroom adjoined it at the back. The rent was £1 5s. a week. The rooms were completely furnished; each had a fireplace; the parlor contained a large central table, a bookcase, sideboard, comfortable couch, and other convenient articles of furniture. A short distance farther away from the central part of the city, and in not quite so pleasant a street, a lady had a parlor and bedroom on the second floor very comfortably furnished for 18s. a week. This includes, of course, attendance, which means the entire care of the rooms, attendance to the door, the cooking and care of the food, bringing it to the room and removing it again. In one case a lady living alone kept careful record of her expenses. She found that in a fall term all expenses except the rent and attendance amounted to 15s. a week; in the winter term, 14s. 6d., and in the summer term about the same. This included heat and light and laundry, and all living expenses except the rent and attendance. Another young lady, who rented unfurnished rooms, which she made most charming by her simple and inexpensive methods, found that her expenses, including everything, came to 30s. a week. It is more than likely that ladies coming from America to Oxford for purposes of study will, in the main, choose this method of living. They are chiefly women of some maturity, and, as they are quite able to take care of themselves, do not so much need the social protection afforded by life in a hall. In case such women as these come, they will certainly

find themselves more free to enjoy the social advantages of this delightful city if they are quite independent.

It is sometimes possible to obtain boarding in the homes of professors or other gentlemen connected with the university. There will be, of course, a great deal of pleasure to be derived from the associations that will result from such an arrangement as that, and in case a letter of introduction or other means of association brings about such a plan as this, it is very much to be preferred, especially for younger students. It is expected that £2 a week will be the usual price. Boarding can be found in other families at a less price, sometimes as low as a guinea a week.

#### THE CLIMATE.

The climate of England, and especially of English counties, has been very much abused, perhaps more than it deserves. Hawthorne seems to have been of this opinion, and it will be remembered that he declared quite in favor of the summer weather, and says that in England "the really good summer weather is the very kindest and sweetest that the world knows."

It seems to be the fashion for the people from the United States to rail at the climate in nearly all the European countries. The complaint always is that it is relaxing, but as the majority of travelers coming to the Old World are from the Northeastern States, where the air has a special keenness and invigorating zest, it is not strange that the moisture-laden atmosphere in countries whose shores are touched by the influence of the Gulf Stream should be found at first debilitating.

It is said that if Oxford and Cambridge had not been situated exactly as they are one would certainly have destroyed the other, but as both are in the worst climate to be found in England there is no choice. But after all, these criticisms certainly are exaggerated. While there seems to be a great deal of rainy weather, the amount of rainfall is not more than the average. The whole amount for the year is but 26 inches, while for the different months it is as follows:

|                |       |                 |       |
|----------------|-------|-----------------|-------|
| January .....  | 2.358 | July .....      | 2.588 |
| February ..... | 1.652 | August .....    | 2.388 |
| March .....    | 1.604 | September ..... | 2.626 |
| April .....    | 1.736 | October .....   | 2.859 |
| May .....      | 2.079 | November .....  | 2.211 |
| June .....     | 2.529 | December .....  | 1.954 |

People live constantly, I believe, in the expectation of rain; but when it comes it is more a soft, gentle mist, floating doubtfully downward, than any direct or decisive downpour. The real shower perhaps is not more frequent than elsewhere. So far as heat and cold are concerned, the extremes are very much modified.

In the gardens of the colleges the grass is green through the winter, and is never, I believe, parched by the heat of summer, and the English people must be indebted in part at least to the equability of their

climate for the national habit of taking long walks for the sake of exercise. There is scarcely a day in the whole year when it would not be perfectly comfortable at noon for the pedestrian, and the long twilight of summer adds to the available opportunities for this delightful mode of increasing physical vigor. In winter, no further means of supplying heat for the household than the fireplace has been found an absolute necessity. There is a fireplace in every room, its use is universal, and sufficient even in the coldest weather. People who have been accustomed to the pervading furnace heat or steam heat will find the fireplace not entirely adequate, perhaps, but there is no use in railing against this beloved institution, and one can easily make the best of it by piling on the coals.

#### OTHER UNIVERSITIES IN GREAT BRITAIN THAT ADMIT WOMEN.

London University (which is really only an examining and degree-giving body) puts men and women on exactly the same footing; so does Victoria University, the headquarters of which are at Manchester, but which consists of (1) Owen's College, Manchester, (2) University College, Liverpool, and (3) Yorkshire College, Leeds. Students must study at one of these three colleges; women study with men in almost all cases, but there is no facility as yet for women's medical studies in connection with Victoria University, though the medical degrees are open to them. Durham University has this year opened all its degrees to women except the theological. It requires residence, but this need not be at Durham, but may be at one of the other affiliated colleges, e. g., that at Newcastle-on-Tyne. So much for the English universities. Then there is Wales, which only came into existence last year, and consists of a federation of the three university colleges of Bangor, Cardiff, and Aberystwith. The charter states that men and women shall be on an equality in all respects, that every part shall be open to men and women alike, and that there must be some women on the governing body. Last year all the Scotch universities opened their degrees to women, and I believe they are in all respects on an equality with men. In Ireland, the Royal University of Ireland, which, like London, is only an examining body, confers degrees on men and women alike. Trinity College, Dublin, excludes them from degrees and examinations and from instruction.

## CHAPTER XVIII.

### EDUCATIONAL STATUS OF WOMEN IN DIFFERENT COUNTRIES.<sup>1</sup>

---

TOPICAL OUTLINE.—*Introduction: The woman question in general.—The college-bred woman: Statistics of womans' colleges, 1893-1894, compared with 1891-1892.—Women's colleges (Vassar, Smith, Wellesley, Bryn Mawr); views of Misses Burstall and McCabe.—Woman's development in Eastern, Western, and Southern States.—The education of women in different countries (Great Britain, France, Belgium, Netherlands, Italy, Russia, etc.) Citations from official reports, school laws, and other authorities.—Women in the professions: Medicine, law, theology; regulations in various countries.—Woman as a promotive force: School legislation in the different States and in several countries. Citations from school laws and constitutions.—Marriage rate of college-bred women in 1880 and 1892.—Bibliography.*

#### INTRODUCTION.

The interest manifested of late years in the educational development of women in various fields of human endeavor has caused the publication of much valuable information appertaining to that subject, and it might seem that the subject was exhausted. Yet the many inquiries addressed to those engaged in employments open to women indicate that there are still phases of this question which have not been placed within the reach of individuals seeking for authoritative information.

Hence the effort is made in this chapter to group together statements emanating from foreign and home authorities which may answer such queries to a certain extent. The education of women in the United States has been subordinated to the development and conditions in foreign countries; the subject from the home standpoint has been fully treated in reports of associations and in addresses before national and international councils and federated clubs.

The statements from foreign countries, and in part for the United States, have been compiled from official documents, or from reports and essays which cite freely from laws, decrees, etc., promulgated by the different governments.

In speaking of the so-called woman's movement, Miss Frances Power Cobbe, the author and keen thinker, says:

"There have been many movements in the world<sup>2</sup>—some of them recorded in history as portentous events, others forgotten within a few years of their occurrence—which may each be compared to a wave on the surface of the Mediterranean. From the insignificant ripple to the wave-high billow flecked with foam and breaking in cataclysms, they have arisen only to subside to their original level, leaving the boundaries of land and sea where they have stood for a thousand years. There are other movements, on the contrary, which resemble the tides of the ocean, wherein each wave obeys one uniform impetus, and carries the waters onward and upward along the shore.

"Of all the movements, political, social, and religious, of past ages, there is, I think, not one so unmistakably tidelike in its extension and the uniformity of its impulse as that which has taken place within living memory among the women of almost every race on the globe. Other agitations, reforms, and revolutions have pervaded and lifted up classes, tribes, nations, churches. But this movement has

---

<sup>2</sup> The Woman Question in Europe, by Theodore Stanton. Introduction.

stirred an entire sex, even half the human race. Like the incoming tide also, it has rolled in separate waves, and each one has obeyed the same law, and has done its part in carrying forward all the rest. The waves of the higher education of women all over the world; the waves which lifted women over the sand bars of the medical, and (in America) of the legal and clerical professions; the waves which seated them on the school boards and boards of guardians of the poor; the wave which gave them the English municipal vote; the wave which restored to married women a right to their own property—every one of these waves, great and small, has been rolled forward by the same advancing tide."

The majority of thinking persons now concede that with the progress of human events there has naturally come a broadening of woman's sphere. Hence to suitably fill one's position in whatever sphere of action, to successfully contend with others in the struggle for a livelihood which now oftentimes comes upon the woman of the family, it is generally conceded that there is necessity for practical rather than theoretical knowledge. The domestic-economic side of life has been the one most thoroughly understood by the women of all nations until within a short period; but to-day, when equality of mind and business ability of men and women is conceded by the broad minded, it remains simply to state facts bearing upon the outcome of the different efforts to so develop the woman that whatever sphere she may be called upon to occupy, be it wife, mother, bread winner, in humbler positions or in the professions, she will learn to make the most of the God-given talents, and while still exerting a quiet influence in the home or business circle, she will still continue to remember that a womanly woman is a desirable factor in the world's onward movements.

A word of suggestion to those who enter the arena of a working life is here cited from *Woman's Work and Worth*, by W. H. Davenport-Adams. He says:

"Educated women, however, who seek employment must remember that man's bread is earned only by the sweat of his brow; that if they descend into the arena they can not hope for success unless they accept the conditions under which the athlete necessarily strives. They must be prepared for hard work, for persevering work, and not suppose that because they are women the race will be made easier to them than to men. 'Men will run alongside with them, struggling for the same prize,' and as men have generally an advantage in the start, they must brace up every energy and bring into play every faculty to avoid defeat and insure victory. They must have exactness, punctuality, patience, endurance, thoroughness. Superficial knowledge will not do; slipshod, hasty, or imperfect work will not do; weariness, apathy, or disgust before the battle is half won will not do. Whatever they undertake they must go through with it to the end. They must never put forward any work of which they can not honestly say, of which they do not in their own heart believe, that it is done as well as they can do it, that it is in very truth their ripest and best. They must be on their guard against the emotional elements of their nature, against the sudden impulse which makes an eager beginning only to come to an abrupt pause. This is their special danger, and it is here, if anywhere—no doubt through unwise training and the influence of old traditions—that the 'inferiority' of women lies. Experienced teachers tell us that girls equal, frequently excel, boys in quickness of intelligence, but fall below them in power of application. But it is just this power of application, this 'staying power,' that wins the victory.

"The primary use of all knowledge, to adopt a saying of St. Bernard's, is to build ourselves up (*œdificari*); its secondary use is to build up others (*œdificare*). We have sufficiently enlarged on the advantages that each one of us derives from the adequate culture of one's faculties, and we have pointed out the beneficial influence that one so cultivated and disciplined is able to exercise on one's immediate circle. But there is yet another and more material use of knowledge, which must neither be ignored nor despised, when we treat it as a means of securing a respectable livelihood. Until within the last few years, of whatever knowledge women might acquire, general or special, she could make little profit in this way; almost every vocation

was closed against her by custom and prejudice. It is surprising that she so long consented to this arbitrary injustice; yet perhaps not surprising when we remember the ridicule and obloquy accumulated on the few adventurous ladies who first ventured to protest against it. They were informed that woman's true sphere (which few women have ever doubted) was home; that they were not to trespass on the privileges and rights of men; that their grand functions were those of the wife and the mother, and that contact with the world in 'a business capacity' would sully and degrade them. It was useless to argue that women might be wives and mothers and yet find leisure for much honorable work; that many felt themselves specially qualified for special callings; and that for the unmarried, if of gentle birth or refined intellect, the existing channels of profitable activity were wholly inadequate. The storm raised by jealousy, ignorance, and bigotry continued to rage, and though it has to some extent spent itself most uselessly, its mutterings at intervals are still 'unpleasantly audible.'

## THE COLLEGE-BRED WOMAN.

A historical résumé of the conditions attendant upon the education of women in the United States would be of inestimable value, but that work has been attempted by well-known writers, and quite successfully, too, so that it is sufficient to simply present statements from the latest books and essays on this subject, simply prefacing such citations by the latest obtainable statistics of women attending college courses. Of the 415 colleges reporting to this office in 1889-90 there were 256 coeducational in character (in some or all departments); the number of women students in 1891-92 was more than 10,000. Of the 158 colleges for women reporting, 14<sup>1</sup> have been placed in a group by themselves, because the admission requirements, standards of instruction, and general organization accord with those that have long been characteristic of colleges of liberal arts. Their work is essentially collegiate, in which respect they differ from the older seminaries for women, which, while making more or less provision for the distinctive studies of the college curriculum, are schools for general instruction.

*Colleges for women, 1891-92, with additions for 1893-94.*

<sup>1</sup> This number was increased to 16 in 1893-94, as additions to the table indicate.

Little preparatory work is done in these institutions, and, as is noticed in the table, the greater proportion of students seek the A. B. degree. This number nearly doubled in 1893-94, and there was marked increase in the number desiring the Ph. B. degree.

In the colleges of Division B the numbers do not increase in such proportion; the graduate students have nearly doubled, however—78 in 1891-92 to 154 in 1893-94.

*Colleges for women, 1891-92, with additions for 1893-94.*

There were nearly twice as many who received the A. B. degree in 1893-94 as in 1891-92; 719 in the last year to 357 in the first. Then 3 students obtained the Ph. D. and 9 received an honorary A. M. The studies included Latin grammar, Cæsar, Cicero, Virgil, Livy, Horace, Tacitus, Juvenal, Greek grammar, Xenophon, Homer, Herodotus, French and German (advanced and elementary), psychology, ethics, logic, metaphysics, political economy, geometry (plane, solid, and analytical), algebra (to and beyond quadratics), trigonometry, and calculus, physics, chemistry, botany, zoology, geology, astronomy, history (other than that of the United States), English literature.

The number of scholarships was 161 in 1891-92 and 249 in 1893-94; the number of fellowships, 9 in 1891-92, increased to 15 in 1893-94; number of endowed professorships, 6 in the former year, no report for the latter. For additional information as to property, income, benefactions, etc., reference is made to the tables of colleges for women, in volume 2 of this report.

An interesting commentary on the higher education of women in the United States is made by Miss Sara A. Burstall, B. A. (University of London), a scholar of Girton College, Cambridge, England, and mistress at the North London Collegiate School for Girls. Miss Burstall was one of the five teachers sent by the Gilchrist trustees to America during the Chicago Exposition to study educational institutions. From her book, *The Education of Girls in the United States*,<sup>1</sup> the following extracts are made: She says that "in America, as in England, university education for women has been modeled on the system already existing for men. \* \* \* The English distinction between a college and a university does not obtain in America; there the words are used indiscriminately for degree-giving bodies. \* \* \* The system of certain prescribed and certain elective subjects still widely prevails. \* \* \* This system appears to encourage superficiality, \* \* \* but an admirable custom is that of post-graduate work. \* \* \* For the sake of post-graduate study, students often work at two or even more universities, as in Germany. \* \* \* The poorer colleges thus have an important work in reaching persons who, but for their influence, might never have any higher education at all, and who may be stimulated to go on to a real university when once they have tasted the sweets of learning. \* \* \*

"The most important institutions giving a college education to women are the separate women's colleges, founded by private munificence, having their own charters to give degrees and their own independent staff of teachers, the head being in almost every case a man. The four largest and most esteemed of these are Vassar, Wellesley, Smith, and Bryn Mawr; of these we give separate accounts below. The great universities and colleges for men have not been as a rule open to women, though at the present time signs of a change are clearly visible. Thus 'annexes' have grown up at Harvard, Cambridge,<sup>2</sup> and Columbia, New York.<sup>3</sup> These are organizations for giving women the college education men have at these seats of learning. Some of the privately endowed universities recently founded are, however, open to women on exactly the same conditions as to men; the chief of these is Cornell, Ithaca, N. Y. We much regret that time did not allow of our visiting this institution, one of the most important in connection with the question of coeducation. The new University of Chicago has followed the example of Cornell. The Western State universities are also open to women; chief among these is the University of Michigan, which has influenced the university education of women in America more than any other institution.

"There is much discussion among American educators as to whether it is better to send a girl to a separate women's college or to a coeducation university, and public opinion is very strong on both sides. The matter does not turn on the question of securing the higher and most advanced teaching, though that is considered, but rather on social conditions. Some persons object to the conventual character of the women's colleges, isolated as they are from the outside world; others think the calm and freedom from the distractions of social life a positive advantage. We shall, however, discuss this more fully in the chapter on coeducation.<sup>4</sup> There is at least one other great institution admitting women, which, though not strictly a university, for it gives no instruction in ancient languages, is yet of very high rank and of great importance—we mean the Massachusetts Institute of Technology. It grants the B. S. degree, and women have studied there for some years, principally natural science and economics; some have studied architecture.

"All the chief women's colleges require an entrance examination somewhat similar

<sup>1</sup> *The Education of Girls in the United States*, by Sarah A. Burstall, London, 1894.

<sup>2</sup> Radcliffe College.

<sup>3</sup> Barnard College.

<sup>4</sup> It is not intended to touch upon coeducation and coeducational institutions, as this subject has been treated elsewhere; but inasmuch as most of the writers from whom citations are made deal with both phases of college training, it has been found impossible to avoid encroaching upon that phase of education.

to the matriculation examination of the University of London, but not so difficult. Vassar, Wellesley, and Smith accept the certificates of certain schools as substitutes for the examination; Bryn Mawr recognizes no school certificate, only that of the Harvard examinations for women being taken. Girls seem to enter at about the same age as in England, possibly on the whole when somewhat younger; 16 is the limit fixed by the college authorities. The students seem as mature in appearance and demeanor as our English college women, but the American colleges themselves seem rather to resemble boarding schools. The whole morning is taken up with recitations, as in school; the girls have little free time, the rules prescribe retiring to rest at a fixed hour, etc.; there is a weekly holiday, Saturday or Monday, and exeats for the week end are easily and frequently obtained. Some colleges adopt the cottage system wholly or in part; the students live in small groups, each under the charge of one lady, who is in the position of a mother. There is something very sweet and beautiful in these little homes; they are doubtless of the greatest value in making college life for a certain type of girl.

"We heard much from some American educators of the exciting and in some cases injurious effect of a large number of girls living together in one building. This was said to generate an atmosphere of nervous excitement, the noise of the crowded dining hall at meals being particularly bad. The influence of the mass of so many young women on one another was also considered by some to be hurtful, the conditions being so different from home life. We were not able to understand this objection, but there must be some weight in it, for persons of experience and standing urge it strongly. The point seems to be that such a system is unnatural, and therefore necessarily bad.

"The material equipment is much the same in all the principal institutions; it is on the whole very much finer than anything in England, though none of the buildings for women are as splendid as those of Holloway College. The quadrangle plan is rarely used in America, detached buildings being better suited to the cold and snows of their winters;<sup>1</sup> \* \* \* all have good libraries, which are extensively used. \* \* \* All have observatories, well fitted with instruments, on which no expense has been spared; here some of the students work regularly. \* \* \* Everything possible in reason seems to be done for the comfort of students. We were struck with the uniform excellence of the food served at meals.

"The relations of the students with the authorities are marked by great friendliness, and by the absence of any stiffness or formality. This we noticed again and again while going over the buildings with numbers of the faculty, waiting in offices during the transaction of business, at table, and elsewhere. The life of the college left on the writer's mind a peculiar impression of restful pleasantness, something of the feeling of a home. Wellesley, with its beautiful grounds, its seclusion, its art treasures, its traditions, has a spirit of its own, difficult to express in words, but felt by one who visits it. Bryn Mawr recalls Girton, though it is in many respects different. Vassar is majestic; its grounds have the dignity of fine trees and wide lawns; its wealth harmonizes with that of the Empire State (New York), in which it is situated. Smith seemed to the writer to have the characteristics attributed in literature to New England. The morning service in its spacious but simple chapel, where 700 students meet, is singularly impressive.

"We feel, however, very strongly on one point, and after discussing the matter with some American authorities we venture to make an adverse criticism. The required attendance on lectures is far too large in number of hours. In most colleges fifteen hours a week is the rule; some allow more, even twenty hours per week being taken. To an English student it appears necessary to devote at least six hours' preparation, and often more, to every hour of lecture. This would mean ninety hours private work, which, with the lectures, would make one hundred and five hours per week—i. e., seventeen and a half hours per day. This is of course absurd; we therefore

<sup>1</sup> Bryce, Vol. II, p. 551.

conclude that the standard of preparation is not so high as in England. The authorities themselves state that about two hours per lecture is expected; this would give an eight-hour day. But a college lecture which only requires two hours' preparation can hardly be considered to reach the standard of university work at all. We must accept, therefore, one of two alternatives; the students are over-worked, or the work done is not of a very advanced character. When we remember that students are often admitted at 16 years of age, we can take the latter explanation. But it would be in the highest degree unjust to suppose that in the best colleges the standard is, as a rule, low.

"The writer would suggest that, in the women's colleges, at all events, the students must, to do justice to their instruction, work long hours, though some of the work is not of a very intense kind. This *a priori* conclusion was borne out by some of the phenomena we observed on visiting the women's colleges. In one we were informed that it was very difficult to get the students to avail themselves of the opportunities for physical exercise; they never seemed to have any time. As lectures were given both morning and afternoon, and as the time between had to be filled with reading, laboratory work, etc., we could understand that the custom of devoting the early afternoon to physical exercise, as at Cambridge, could not well be followed. In two other colleges we were told that great stress was laid on the observance of the rule of retiring to rest at 10 p. m. This would be unnecessary if the students had more free time, as they would probably then find out for themselves how to fit in their work without sitting up late. We were struck by the absence of all allusion to that social life among the students in their own rooms which forms so important a part of English college life among women, does so much to develop self-reliance and thought on subjects apart from study, and, indeed, helps so materially toward that maturing of character which is the most important result of the years spent at college.

"Such social life may exist in American colleges; our stay was too short to enable us to be positive on the subject, but we heard nothing of it, and we could not see where the time for it was to be found. The arrangement of rooms, too, in some buildings would hinder the rise of such a system. The English ideal, that each student should have her own domain—one room or two—does not generally prevail. A common rule is to have rooms in suites, two bedrooms and one sitting room; in the main building at Vassar three bedrooms go to each sitting room. In some colleges two students share a bedroom and a sitting room. Such arrangements lend themselves to the formation of college friendships, also an important part of college life, but we can not but feel that to put each student by herself, to let her live alone and work alone for some portion of the day, and to give her opportunities of receiving her friends in her own rooms, much as ladies do in their houses, tends to develop the individual character and to change the school girl into a woman.

"When we consider how much freer the discipline of American schools is than that customary in England, it seems strange that college life there should offer so narrow a field for the self-direction of the individual. We feel as certain as a stranger can venture to be that the cause of this is the exaction of fifteen hours per week attendance on lectures. Any experienced teacher can understand that quite as much advanced work might be done in fewer hours. Indeed, the students would then do more, as they would have more time for study. They would also enjoy what is, in the writer's opinion, one of the greatest privileges of English college life among women, time to think. In the family the girl has home duties; her school days are filled with varying occupations; on leaving college she will have to satisfy the claims of practical and professional life or of society. The period between school and adult life, spent as it is from the family, in comparative solitude and independence, is the time for the growth and maturity of the inner nature. Such a privilege, it seems to us, few American college girls can ever enjoy. \* \* \* Vassar is, in the strict sense of the word, the oldest women's college in the United States. It was founded by Matthew Vassar in 1861, and opened in 1866.

"The college had to face a good deal of ridicule and opposition at first, but now holds a recognized place. Other benefactors have added to the endowment provided for it by the founder; a new model building for the residence of students, well designed and beautifully decorated, was just being finished at the time of our visit. There are 430 students, with a faculty of 41, 12 being men. Students are admitted after passing the usual entrance examination, or on producing certificates from schools approved by a committee of the faculty, the certificates of the regents of the University of the State of New York, or the certificate of the Harvard examination for women. The chief feature of the regular course is the insistence on two languages (one of which must be Latin) being studied for two years. Music and art may be studied as well as academic subjects. The fee for tuition, board, lodging, and washing is \$400, music and art being extra. Large sums are devoted to scholarships for students who need aid. \* \* \* Smith College was founded in 1875 by Miss Sophia Smith, with the object of establishing an institution for the higher education of young women, which should give them means and facilities for education equal to those in colleges for young men. It has three courses of study: The classical, leading to the degree of B. A.; the scientific, to that of B. Sc. (bachelor of sciences); and the literary, to that of B. L. (bachelor of literature). Art and music are also studies. It is difficult to describe these courses without giving elaborate details, as so many subjects are required. Electives are allowed, especially in the later years, to be selected from a very complete list, which contains the usual academic subjects, art, and music. \* \* \*

"Many of the college students engage in teaching after their college course is over; the phrase, 'a graduate of Smith,' is quoted in speaking of a woman on the staff of a high school, as if it conveyed a special qualification. From this and other indications we infer that the college takes a high place in public estimation. \* \* \*

"The site of Wellesley College is ideal; the various buildings, grouped among lawns and fragments of the original forest, and crowning the natural elevations of the ground, form a beautiful whole, different from anything we associate with colleges in England, but with a charm and grace peculiarly its own.

"The president's report gives an interesting account of the work of the alumnae (old students) during the thirteen years which have passed since the first class graduated from the college. Of these 734 graduates, 540 have engaged in educational work, 134 have married, 23 have died, 12 hold the medical degree and are practicing physicians, 15 are trained librarians, 9 have engaged in foreign and 11 in home missionary work. Many of the whole number are in conspicuous positions of responsibility.

"The whole number of students at the date of the last report (1892) is 700. A large number who applied for admission were debarred for want of room. The officers of the college number 92, 77 being engaged in teaching. Wellesley is remarkable for having had from the beginning a woman for its president, and its staff is composed almost entirely of women. By the munificence of a special benefactor, the teachers enjoy what is termed a 'Sabbatical year;' that is, they can spend each seventh year in study or rest. Most come to England for this purpose. Students are admitted on examination or 'on certificate.' The college courses are two—classical and scientific, leading respectively to the degrees of B. A. and B. Sc. So much required work and so much elective, amounting to fourteen to sixteen hours a week, is the rule. The proportion of students obtaining a degree is unusually high. In 1891 there were 123 graduates. Very few students do post-graduate work at Wellesley, only 10 appearing out of 700 in the last list. \* \* \*

"The writer spent a day and a night at Wellesley College, and had some opportunity of seeing the life of the place, and formed a very favorable impression of it. The relations between the authorities and the students seemed particularly cordial and friendly; the girls, in spite of the somewhat long hours of work, were bright and happy looking, and the atmosphere of refinement and kindness was peculiarly delightful. \* \* \*

"Bryn Mawr, near Philadelphia, although it is only 8 years old, having been opened in the autumn of 1885, has already taken a very high place among the women's colleges. It has laid itself out to give advanced instruction, and has thus a large number of graduate students, 3 of them being certificated students of Girton College, 2 wranglers, and 1 who took a first class in the classical tripos. This fact gives English people a convenient standard from which to estimate the character of the instruction given at Bryn Mawr. The faculty consists of men and women of very high standing, including graduates of the great German universities, Zurich, Johns Hopkins, Harvard, Cambridge (England), a distinguished Newnham student, and the only woman who has taken the D.Sc. in mathematics at the University of London. There are 38 instructors and 194 students, 32 being graduates doing post-graduate work. Several of these are fellows of the college. Their position is of special interest (there not being anything to exactly correspond to it in our English colleges). One of the fellowships—that in Greek—is held by the Girton student of classics mentioned above.<sup>1</sup> The regulations state:

"The most distinguished place among graduate students will be held by the fellows, who must reside in the college during the academic year. Nine fellowships, of the value of \$525 each, are awarded annually. They are open to graduates of Bryn Mawr College, or of any other college of good standing."

"Undergraduates are required to pass the Bryn Mawr entrance examination, which appears to be nearly equivalent to the matriculation examination of the University of London. The only exemption allowed is the Harvard certificate in equivalent, or a certificate from a college or university of acknowledged standing. Private schools prepare the majority of students. In the current calendar the proportion from private schools is 79.8 per cent; other colleges and universities send 9.8 per cent, and high schools only 8.0 per cent; the rest (2.4 per cent) were prepared by private study.

"The course for the B. A. degree requires some English science—or science and history—and philosophy. This only occupies part of the time; the rest must be given to the 'group' selected by the student. The group system is borrowed from the course at the Johns Hopkins University, Baltimore. It is intended to allow some degree of specialization, with provision for width of view by combining subjects. Five groups are arranged, as follows: (1) Any language with any language; (2) Any science with any science; (3) Mathematics with Greek and Latin; (4) Mathematics with physics; (5) History with political science.

\* \* \* "The research system in the colleges and universities \* \* \* is worthy of careful attention by those interested in collegiate instruction for women. It is certainly true that much of the post-graduate work in American colleges corresponds in standard to that done in preparation for an honor degree at Oxford and Cambridge, but the method is different, the students being taught how to do research, and not being required to consider what is demanded by the examiners. It seems somewhat anomalous that former women students of English colleges should be following advanced courses of study in America, under English teachers,<sup>2</sup> because they were unable to find opportunities of doing so at home.

"The system of fellowships at Bryn Mawr has an important influence on the question of post-graduate work. The Association of College Alumnae, a body of college women, also grants two fellowships for the encouragement of research.

"Our second criticism has been made already. It refers to the women's colleges, to their long hours of work, and to the apparent absence of repose and opportunity for thought and individual development consequent upon such excessive demands on the students' time. We can add nothing to what has been said already; we can only reiterate it."

The comparison of English and American institutions, the requirements of study from college girls of different ages, the general good health of the average student

<sup>1</sup> Another is held in mathematics by a Girton student (1894).

<sup>2</sup> This was the case at Bryn Mawr during the session 1892-93.

who pursues the higher branches are points which interest Miss Burstall. In the citations which follow from *The American Girl at College*, by Miss Lida Rose McCabe, more stress is placed upon the individuality of the woman. She says:

"Probably the college-bred woman is the most observed woman of the present day. After twenty years of intellectual gestation she begins to impress her individuality on the community. Discussions of eminent men as to women's mental ability, moral and physical status, predilection for matrimony, or fitness for voting have been going on for a quarter of a century.

"Meanwhile maiden bachelors of arts and science have multiplied, until now there are some 3,000 mature women who have had college training, and as many more in the heyday of youth, all of whom fall under the surveillance of a public that ceases not to question the practical outcome of this modern innovation. One by one objections raised from the intellectual, moral, physical, or matrimonial standpoint, have disappeared in the light of statistics. To one tangible phase, however, the masses cling with a covert desire to find in it sufficient evidence to outweigh the favorable testimony already adduced.

"Of what avail to women is scientific training? What is the practical outcome of higher education? These are questions whose reiteration invites deeper investigation. The marriage ratio, health statistics, number and physique of the offspring of college-bred women attest that, if scientific training does not facilitate, it certainly does not interfere with the radical function of her being. That higher education enlarges her opportunities as a breadwinner is irrefutable.

"In proportion as the price of skilled labor advances, the college bred woman's earnings will undoubtedly increase. Unhappily nothing short of an audited account in dollars and cents of the earnings of every college woman in the breadwinning world—earning the direct outcome of knowledge garnered within the walls of their alma mater—will satisfy a large portion of the community that higher education has a raison d'être.

"Coming as it does at an epoch when women are largely a factor in the industrial prosperity of the country, the desire to know the practical end to which the college-bred woman is able to put her superior training, when thrown upon her own resources for a livelihood, is under the circumstances natural, and consequently wholesome.

"Results alone justify innovations. To define at present the practical outcome of higher education is nevertheless as impossible as would be an exhibit of philanthropy or religion. To estimate the work of the present demands the eyes of a future age. As woman's colleges are said to have been founded on the Hellenic idea of 'culture for culture's sake,' authorities have not found it incumbent to follow the material fortunes of the alumnae. Masculine colleges or universities do not anticipate or define the careers of the young men they annually set adrift. Why, then, should women be required to render an account of their stewardship? logically argue the official heads. But public interest in tangible results is persistent and insatiable. Colleges are now beginning to gather data to satisfy this prevalent desire. The Vassar and Wellesley calendars of 1891 and the souvenir of the Mount Holyoke semicentennial throw interesting light upon the varied pursuits in which their alumnae have found practical activity. Smith, Harvard Annex, and Bryn Mawr have no record, nor has any been kept by the coeducational institutions. Nevertheless, all are more or less rich in individual recollection of exceptional careers. The evidence that higher education has elevated and broadened the opportunity and raised the monetary value of woman in the first field in which she found a marketable outlet for her intellect is conclusive. Teaching, with increasing equipment and ripening sense of responsibility, retains its hold on college women. One-fourth of the women who go to college go with teaching as the end in view. In keeping with the growth of colleges, preparatory schools have multiplied, until now there is scarcely a town of importance from the Atlantic to the Pacific that has not

a preparatory school in the keeping of a B. A. or an A. M. of Vassar, Wellesley, Smith, Bryn Mawr, the Annex, or some coeducational university. The insufficient preparation of students who applied for admission retarded the growth of women's colleges. So few in number and incompetent in faculty were girls' preparatory schools that Vassar and Wellesley were forced for some years to sustain academic or preparatory departments. This is now obviated, thanks to the number of skilled women sent forth yearly by the colleges to successfully conduct private enterprises, the certificates of many of which are recognized by Harvard and other leading colleges. In higher and special fields of instruction, in many conservative seats of learning, the college women now stand on equal footing, mentally and financially, with the men professors. It was not so much intolerance of sex as want of higher training that debarred her formerly." \* \* \*

#### GRADUAL DEVELOPMENT OF THE WOMAN MOVEMENT.

If this movement could be followed in its entirety in this country or throughout the world, it would be a matter of extreme interest, but much must necessarily be omitted in an essay of this kind, and, further, the subject has been quite thoroughly treated by different authors.

The following citations from *Woman's Work in America*, by Annie Nathan Meyer, taken in conjunction with the college tables on preceding pages, will show the onward movement of the woman question in different parts of the United States.

In the introduction to the above-mentioned work Mrs. Julia Ward Howe states that "a comprehensive view of the attainments made by American women in this century, and especially during the last fifteen years, can not but be of great importance and value. The cruel kindness of the old doctrine that women should be worked for and should not work, that their influence should be felt but not recognized, that they should hear and see but neither appear nor speak—all this belongs now to the record of things which, once measurably true, have become fabulous.

"The theory that women should not be workers is a corruption of the old aristocratic system. Slaves and servants, whether male or female, always worked. Women of rank in the Old World were not necessarily idle. The Eastern monarch who refused an army to a queen, sent her a golden distaff. The extremes of despotism and of luxury, undermining society and state, can alone have introduced the theory that it becomes the highly born and bred to be idle. With this unnatural paralysis of woman's active nature came ennui, the bane of the so-called privileged classes. From ennui spring morbid passions, fostered by fantastic imaginations. A respect for labor lies at the very foundation of a true democracy.

"The changes which our country has seen in this respect and the great uprising of industries among women are, then, not important to women alone, but of momentous import to society at large. The new activities sap the foundation of vicious and degraded life. From the factory to the palace the quickening impulse is felt, and the social level rises. To the larger intellectual outlook is added the growing sympathy of women with each other, which does more than anything else to make united action possible among them. A growing good will and esteem of women toward women makes itself happily felt and will do even more and more to refine away what is harsh and unjust in social and class distinctions and to render all alike heirs of truth, servants of justice.

"The initiative is now largely taken by women in departments in which they were formerly, if admitted at all, entirely and often unwillingly under the dictation of men. Philanthropists of both sexes, indeed, work harmoniously together, but in their joint undertakings the women now have their say, and, instead of waiting to be told what men would have them think, feel obliged to think for themselves. The result is not discord, but a fuller and freer harmony of action and intention. In industrial undertakings they still have far to go, but women will enter more and more into them and with happy results. The professions, indeed, supply the

keystone to the arch of woman's liberty. Not the intellectual training alone which fits for them, but the practical, technical knowledge which must accompany their exercise puts women in a position of sure defense against fraud and imposition."

The gradual educational development of woman in the Eastern States may be traced through a study of the history of those States. This would lead, however, to research over more than a century of human progress. Generally speaking, the boys had opportunities for school instruction of different grades, while in earlier times the girls were limited to home instruction until the earlier part of this century.

"By the close of the eighteenth century most towns in New England had made some slight provisions for educating girls; how slight almost any early town history will show. \* \* \* In 1789 great educational advance was made in Boston. A system was adopted which provided a 'Latin school' for fitting boys of 10 years old and over by a four-years course, including Greek and Latin, for the university; also three reading and writing schools.<sup>1</sup>

"Boys had the right to attend these all the year round; girls from the 20th of April to the 20th of October. This was the first admission of girls to the 'free schools.'" \* \* \*

Then, again, in tracing the historical development, Miss Eastman quotes Abigail, wife of President John Adams, who said: "The only chance for much intellectual improvement in the female sex was to be found in the families of the educated class and in occasional intercourse with the learned of the day. Whatever of useful instruction was received in the practical conduct of life came from maternal lips, and what of further mental development depended more upon the eagerness with which the casual teachings of daily conversation were treasured up than upon any labor expended purposely to promote it. Female education in the best families went no further than writing and arithmetic, and in some few and rare instances music and dancing."

Of woman's culture in the different States, Miss Eastman says:

"The young ladies of Massachusetts in the last century were certainly readers, even though only self-taught, and their taste was not for the feeble and nerveless sentiment or the frantic passion of our day, but was derived from the deepest wells of English literature. The superb flowering of native mental gifts in many women of the last part of the eighteenth and the early part of the nineteenth centuries, under so slight stimulus of educational advantage, would almost force upon us the theory of Descartes, that 'in order to improve the mind we ought less to learn than to contemplate,' and lead us to accept the dictum of Huxley, that all the time we are using our plain common sense we are at once scientists and artists. \* \* \*

"The third and fourth decades of the nineteenth century marked an epoch in education through the service done by a few teachers who seemed to have fresh inspirations as to the capabilities of women and practical ability to embody them. They helped to verify the forecast of Rev. Joseph Emerson, principal of the academy at Byfield, Mass.

"Mr. Emerson was deeply interested in the theme of the millennium, and regarded women in the capacity of educator, as the hope of the world's salvation. Unlike his contemporaries, he believed in educating young women as thoroughly as young men, and in 1822 predicted 'a time when higher institutions for the education of young women would be as needful as colleges for young men.'"

Among the early pioneers in the education of girls was Mrs. Emma Hart Willard, born in 1787 in Connecticut, whose life work will always be associated with that of Troy Female Seminary. Brought up amidst cultured people, she early became convinced that the young people of her own sex were capable of grasping the higher branches of knowledge, and that such mental development should not be limited to boys alone.

<sup>1</sup> Miss Mary F. Eastman in *Woman's Work in America*, by Annie Nathan Meyer.

As an outcome of the work accomplished in that seminary, many institutions<sup>1</sup> of a similar grade have sprung up all over the country, in the South particularly, and "two-thirds of them confer degrees."

The early history of this movement would be incomplete without reference to Mount Holyoke, which, dating from 1836, was organized by Mary Lyon and aimed to have a "course equal to that required for admission to college." Since 1888 this seminary and college is authorized "to confer such degrees and diplomas as are conferred by any university, college, or seminary of learning in this Commonwealth."

The education of women in the Western States is so intermingled with that of the boys, in coeducational institutions, that it is almost impossible to give even the merest historical sketch without trenching upon a subject beyond the aim of this chapter.

For such information reference is made to the chapters on coeducation in the Report of the Commissioner of Education for 1891-92, and its continuation elsewhere in this report.

The Government's early attitude toward the education of woman is thus stated by Mrs. May Wright Sewall.<sup>2</sup> She says:

"Higher education in the West has been fostered by the National Government, by the governments of the separate States, by many different denominations of the Christian church, and by individual enterprise and devotion.

"As a large number of the strongest institutions in the West open to women owe their origin to provisions made by the General Government, it is fitting to direct our first inquiry to the relations of that Government to education in the West. On May 25, 1785, the Continental Congress passed an ordinance disposing of lands in the Northwestern Territory, by which it was decreed that 'there shall be reserved lot No. 16 of every township for the maintenance of public schools within said township.' On July 13, 1787, the famous ordinance relating to the government of the territory northwest of the Ohio River was passed. In it occurs the passage which is so frequently cited in proof that the United States Government stands pledged to aid the higher as well as the lower education, viz, 'Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged.' Ten days later Congress passed another ordinance fixing the terms of sale for the tract of land purchased by the Ohio Company. This ordinance stipulated not only that section 16 of every township should be reserved for the maintenance of schools, but also 'that two complete townships shall be given perpetually for the purposes of an university, to be laid off by the purchaser or purchasers as near the center as may be, so that the same shall be good land, to be applied to the intended object by the legislature of the State.'

"In these ordinances of 1787 we find the germ of all our State universities in the West." \* \* \*

The early efforts of different denominations to so educate girls that they become worthy helpmates in the battle of life are clearly defined by Mrs. Sewall, and she states that "the colleges under Methodist control have been generally first and foremost in opening their opportunities to women."

The extent of coeducation and coeducational institutions in the West is such that one may almost say there are no women's colleges, for out of 249 higher institutions 209 are coeducational, and therefore only about one-sixth<sup>3</sup> are devoted to female education. "But," to quote Mrs. Sewall again, "almost without exception the women's colleges in the West include preparatory departments; very generally the attendance in the preparatory department exceeds that in the collegiate; frequently members of the faculty divide their attention between preparatory and collegiate classes;

<sup>1</sup> Over 200 such institutions; vide *Woman's Work in America*, p. 33.

<sup>2</sup> Vide *Woman's Work in America*, by Annie Nathan Meyer.

<sup>3</sup> From advance sheets of the Report of the Commissioner of Education 1894-95.

generally the courses of study offered are less numerous and less complete than those offered in colleges of liberal arts for men; most of these institutions have paltry or no endowments.

"With all these limitations, some of them do much creditable work; but at present they occupy a rather vague, indefinite position between 'the ladies' seminary' of thirty years ago and the modern college. \* \* \* Among colleges characterized from birth by a liberal and progressive spirit may be mentioned the Cincinnati Wesleyan Woman's College. This institution was chartered in 1842, and claims to be 'the first liberal collegiate institution in the world for the exclusive education of women.' This claim sounds somewhat boastful, but a perusal of the discussions which were called forth by the establishment of this college will convince one that its undertaking was novel and quite foreign to the thought of its public, if not, indeed, quite unprecedented in the world's history."

After speaking of the limitations in Western colleges and of the giving of honors too easily, Mrs. Sewall says:

"The growth of progressive thought in the West concerning the social and civil position and the industrial and professional freedom of woman tends to supply woman with incentives to obtain the best education, and the defects in their education hitherto caused by the absence of incentive promise to be remedied with increasing rapidity."

The same criticism may be made in regard to Western colleges as is made on institutions elsewhere in this country, that the average requirements for admission should be raised, and then secondary schools could maintain a higher standard. This suggestion lends itself to the general discussion of such subjects and is in no wise limited to any special section.

The educational facilities offered to the women of the South have greatly increased of late years. Formerly it was conceded that it was not "desirable to give her any other education than what sufficed to make her a good housewife and an agreeable but not too critical companion for her husband." But, as is stated by Christine Ladd Franklin:<sup>1</sup>

"It is plain that so long as this view of the function of women prevails they will have little incentive and little opportunity for undertaking the severe labors which are the necessary condition of a solid education. The lighter graces which are supposed to result from a little training in French and music and from some study of English literature have for a long time been accessible to Southern girls, both in schools of their own and in the numerous private and fashionable schools of Baltimore, Philadelphia, and New York. When a girl was a member of a thoroughly cultivated family she naturally became a cultivated woman." \* \* \*

It is not to the purpose to trench upon the subject of secondary education in the Southern part of this country (except perhaps to mention the establishment of the Bryn Mawr Preparatory School in Baltimore in 1884), but merely to touch upon the historical phases of higher education in the various sections. As in the North, so in the South, says the same writer, the Moravians "have been foremost among the religious denominations in the establishing of schools for girls of a thorough if not of an elementary type"—and she quotes, as of widespread influence, the Salem Female Academy, opened in 1804, "among the foothills of the Blue Ridge," which has educated between 6,000 and 7,000 pupils.

"In January, 1839, the Georgia Female College (now the Wesleyan Female College) was opened at Macon, Ga. It had from the beginning the power of conferring degrees, and 11 young women took the degree of A. B. in 1840. It is commonly said that this is the first college for women that ever existed. That it was called a college was doubtless merely owing to the politeness of the Georgia legislature." \* \* \*

Mrs. Franklin states that "the years about 1840 seemed to have been a period of general awakening," for about that date were established the Judson Institute,

<sup>1</sup> In *Woman's Work in America*, by Annie Nathan Meyer.

founded by the Baptists in Alabama in 1839; the Greensborough Female College (Methodist), which, the "first incorporated college for women in North Carolina," obtained its charter in 1838, but received students first in 1846; the Frederick Female Seminary of Maryland, incorporated in 1840 and opened in 1843; St. Mary's School, at Raleigh, N. C., opened in 1842.

Frequently it is asserted that the collegiate education of women does not exist in the South, but, as Mrs. Franklin says:

"In many a Southern family the question whether a girl shall go to college or not has become, at least, a question to be discussed. It rests largely with existing college graduates to determine whether a sentiment in favor of the higher education for women shall grow rapidly or slowly, and whether schools for 'superior instruction' shall be or shall not be improved in quality. It is not necessary that every girl should go to college, but it is necessary that some should go, for there is absolutely no other way of keeping up the standard of the lower schools except by making sure that they give such instruction as will stand the test of the college-entrance examinations. \* \* \*

"The real colleges for women in the South consist of the Woman's College of Baltimore (the only representative in the South of separate education for women of a collegiate grade), and the coeducational colleges (including in that term those in which the management and the degrees are the same for the men and the women, though the recitations may be conducted separately). Of these, the University of Texas, the Tulane University (which is the State University of Louisiana), the University of Mississippi, and the Columbian University in Washington are the important ones. The admission of women into all of these universities is of very recent date, and may be taken as an indication of a general movement in favor of a greater degree of generosity toward women, which may in time sweep over the entire South. The geographical distribution of these entering wedges is worthy of note. Baltimore and Washington on the north, the University of Missouri on the west, the State universities of the three States of the extreme Southwest; add to this the fact that the State of Florida has every one of its four colleges for men open to women, and that it has not a single girls' seminary of the old-fashioned type, and it may well be believed that the modern idea of what a woman requires in the way of education is destined to close in upon the entire Southern country, and that the contentment which Southern women have hitherto shown with the unsubstantial parts of learning will eventually be replaced by more far-reaching claims." \* \* \*

Such, in brief, are the main points pertaining to the education of women in America. Much of interest has necessarily been omitted; the principal effort has been to group together statements in a condensed form which are widely scattered and, therefore, not always available to persons desiring information in regard to woman's status and the progressive movements in the education of girls.

#### THE EDUCATION OF WOMEN ABROAD.<sup>1</sup>

##### GREAT BRITAIN.<sup>2</sup>

The endeavor is made in the following pages to portray the conditions, as far as possible, attendant upon the higher education of women in different countries, and also, as far as possible, to present statements anent the women's colleges, as apart from the coeducational institutions. The latter are referred to, however, as the subject could not be properly treated if these developments of the new era were omitted. This presentation is only a tentative one, and there are many lacunæ, but it is thought probable that these very lacunæ may be the means of bringing out information heretofore unavailable.

<sup>1</sup> The subject of women in the medical and legal professions is treated at the close of this chapter.

<sup>2</sup> Information gleaned from *The Woman Question in Europe*, by Theodore Stanton; from article by Miss Alice Zimmern in the *Forum* (April, 1895); from college charters; from the *Contemporary Review* (March, 1896); from *Athenæum*, 1895, etc.

The establishment of Girton College and Newnham, and the developments at Oxford and Cambridge universities are so fully treated in the chapter on "Facilities for the university education of women in England," by Mrs. M. F. Crow, which precedes this, that information appertaining to those institutions has been purposely omitted here. There are certain points of interest which will be presented, however. The movement in regard to the higher education of women in England is of comparatively recent origin, for it is only within the last forty years that the subject has been actively discussed, its initiative being in 1846-47. Queen's College, for the education of governesses, was the first to apply for a charter, which, granted in 1853, was the "first formed public sanction given in modern times to the principle that the education of English women was not less important or less worthy of honor than that of men."

Two of the leaders in this advance movement for women were Miss Buss, head mistress of the North London Collegiate School, and Miss Beale, principal of the Ladies' College in Cheltenham, both of whom were trained in Queen's College.

In 1849 Bedford College, of similar purpose, was established, but it differentiated itself from Queen's College by holding aloof from denominational influences.

Now a period of seventeen years intervenes until there comes the request for the admission of girls to the local examinations at the University of Cambridge, and this is soon followed by a movement at Oxford which, instead of classing the girls separately, as in the Cambridge plan, placed all candidates on a list giving the results of examinations, irrespective of sex. Various associations were formed from time to time, all aiming, by means of lectures and classes, to give similar advanced instruction to women as is given to men in the universities. Among these may be named the North of England Council for the Higher Education of Women, and an offshoot, the Ladies' Council of the Yorkshire Council of Education. These led in the higher educational movements for women, but similar associations were soon formed in the majority of the large towns of England and in university centers of Scotland and Ireland.

In 1869 came the first developments of Girton<sup>1</sup> College; in 1873 of Newnham,<sup>1</sup> which only aimed at first to thoroughly prepare for the Cambridge local examinations, but many of the students have "shared the privilege granted to the Girton students of informal examination in the tripos<sup>2</sup> subjects."

Alexandra College and Queen's Institute, both in Dublin, were among the earlier institutions for the higher education of women in Great Britain. The latter aimed to be technical in character, but lack of general culture in the students who desired to enter led to a change of plan in favor of more general instruction.

The most ancient seats of learning, Oxford and Cambridge, are developments of the old monastic system, and still retain many mediæval customs; in direct contrast are the modern institutions, such as London, Durham, Victoria, and the University of Wales. London University, founded in 1836, is an examining and degree-conferring body, which aims to develop "into a teaching as well as examining university." Since 1878 women have been admitted to the faculties of arts, sciences, medicine, law, and music. There is no theological faculty. A special medical school for women was opened, whose degrees give very high standing in the medical profession. In this university<sup>3</sup> women stand equally with men. They take part in the government of the university, except that they do not vote for a member of Parliament, as do the male members of the governing bodies.

Victoria, dating from 1880 and comprising the university colleges of Manchester,

<sup>1</sup> See chapter on "Facilities for the University Education of Women in England."

<sup>2</sup> Admission to the tripos examinations is permitted to female students who have obtained an honor certificate in the higher local examinations.

<sup>3</sup> The University of London, on presentation day, 1895, gave Miss E. A. S. Dawes the degree of Litt. D., the first woman to receive the degree. Of the 253 bachelors of art, 80 were women, and women students received 8 of the 29 M. A., 10 of the 81 B. Sc., 8 of the 77 B. M., and 10 of the 47 M. D. degrees conferred.

Liverpool, and Leeds, examines, says the charter, "all persons, male and female, who shall have pursued a regular course of study in a college in the university." Women are not admitted to the medical schools of this university.

Wales, the youngest university, comprises the colleges of Bangor, Cardiff, and Aberystwith. Its charter (1894) says that "women shall be eligible equally with men for admittance to any degree which the university is by this our charter authorized to confer; every office hereby created in the university and the membership of every authority hereby constituted shall be open to women equally with men." The governing body is the university court. Some of its members must by charter be women, and there is at present one lady member of the senate.

Durham now acknowledges women, and a petition<sup>1</sup> requests the privilege of so altering the charter as to confer degrees on duly qualified women in all subjects except theology.

On March 3, 1896, a resolution<sup>2</sup> was submitted to the congregation of the University of Oxford, which, if carried, would have had the effect of conferring the B. A. degree on women students who had complied with the conditions of residence and examination required of men for that degree, limited by the further condition that the woman B. A. must have passed in honors. In making a plea for woman's higher education, Millicent Garrett Fawcett<sup>3</sup> says:

"The vitality of every ancient institution may be tested by the power which it shows of adapting itself to modern changes and the growth of modern life. The ancient universities have shown this vitality in many directions, by the introduction of greater variety into their curricula, by opening their doors to nonconformists, by the help they have afforded to secondary education through their local examinations for boys and girls, by the invention and vigorous promotion of what is called university extension—by means of which more than 60,000 persons of both sexes are each year receiving instruction of a systematic character—and last, but not least, they have shown their vitality by accommodating themselves to a social change which has already taken place, one of the manifestations of which is a demand on the part of women to share in the blessings of university education."

In speaking of the effect of higher study upon women, the point is often made that such study tends to break down the health. Here again Mrs. Fawcett says:

"Women at Cambridge have been taking the same university course as men for twenty years, and have suffered no injury to their physique. A few years ago Mrs. Sidgwick made a most laborious statistical inquiry into the effect of academic work on the health of women. For this purpose she investigated the physical history of more than 500 women students of Oxford and Cambridge, and compared it with that of their sisters who had not had academic training, and also with that of their parents and brothers. The result was that the statement that a university course was injurious to the health of women entirely broke down."

Latest advices from England indicate that two educational bodies have reported favorably in regard to the subject of university degrees for women. These are the Church Schools Company, 18 out of 24 head mistresses signing the memorial, and the Girls' Public School Company, whose petition was signed by 34 out of 36 head mistresses.

The advance in noncollegiate graduate study is noticeable through the step taken by the London School of Economics, which is under joint control of the Chamber of Commerce and the Society of Arts. Its courses cover commercial history and

<sup>1</sup>The authorities of Durham University have received an intimation that their petition for a modification of the charter, such as would enable them to confer degrees upon women, has been granted. There will henceforth be no distinction of sex among the alumni of the university (except, we presume, in the faculty of theology). The University of Wales remains, of course, the most comprehensive of all the British universities in this respect, having been founded without sex distinctions, even for the teaching staff and the governing authorities. (*Athenæum*.)

<sup>2</sup>The proposal was rejected by a vote of 215 to 140.

<sup>3</sup>In the *Contemporary Review* of March, 1896.

geography, taxation, economics, political science, commercial and industrial law. The school opened with 200 students of both sexes, such as teachers, journalists, government employees, clerks from mercantile offices, experts, and persons from the municipal civil service.

In addition to all that is being done in other parts of Great Britain in the matter of higher education, the University of St. Andrews offers all advantages to women, and the other universities of Scotland offer similar advantages to those obtained at Oxford and Cambridge. Besides these opportunities there are others; for instance, Queen Margaret's College is the only college for women in Scotland really on the lines of a university and fitting its students for university degrees as soon as these are thrown open to women. It is the outgrowth of a small scheme started by a few ladies for the higher education of women some fifteen years ago. To this scheme the Glasgow University gave most generous sympathy, and after the usual vicissitudes the scheme grew until it finally became incorporated as a college, to which a wealthy woman gave the present buildings as a home. It has about 200 women students pursuing studies in art, science, and medicine under a staff of professors, many of whom are identical with those of the university.

The work of the associations for the university education of women, both in Glasgow and Edinburgh, has been of inestimable value to those desiring a higher education, for on October 19, 1892, the University of Edinburgh opened not only its courts, but its arts classrooms, to women students on the same terms as men. The Scottish University commission now gives greater latitude to the subjects of study for a degree.

As a matter of interest to those who are observing the gradual development of the "*mouvement féministe*," a résumé of an address is given. It is by the Right Honorable the Countess of Aberdeen, and was delivered at a meeting of the Edinburgh Association for the University Education of Women on April 22, 1885. Prior to the commencement of the meeting, the Edinburgh University certificate in arts was presented to those who were successful in competing for it. The Countess first referred to the work accomplished by the association and to its eminent usefulness. She hoped that she would be excused "for feeling a pardonable pride when considering the life and growth of the association, and all that has been accomplished by its means."

The Countess remarked that "many of the young men students of the university might feel jealous if they heard the opinion passed by the professors on the equality of the work which they meet with at the ladies' classes." This association has always laid claim to the right of women to be admitted by the universities to the same classes and the same degrees on the same level as men, and has been unremitting in its efforts, along with other kindred societies, in pushing through the universities bill, which enables the Scottish universities to deal with the graduation of women. With this bill a law, the higher education of women would be recognized by the outward badge of a degree being conferred. The Countess of Aberdeen refers to the terror which some persons feel when the subject of the university education of women is mooted, and says:

"It is incumbent on every educated woman to show that her education does not merely mean that she has gained so much knowledge herself, or possibly the power of imparting it to others, or that she is henceforth to devote herself to the main idea of bringing out some literary or scientific work. It may mean all this; but let it also mean that it has so enlarged and developed her mind and reasoning powers as to enable her to be more and more the bright, intelligent companion of father, husband, or brother; to be the mother who not only will know how to draw out the dawning powers of her infant children, but who will realize that her education has conferred no greater boon than the power of keeping abreast of and in touch with her children as they grow up, instead of being left hopelessly behind."

The Countess remarks: "How strange it is to see mothers whose care of their children is most solicitous, but who seem to forget that there is another time in their

lives, when they are passing from boyhood and girlhood into men and women, on which much of their future depends, and when she can only retain influence by being able to enter into and be in sympathy with their studies and pursuits. Are our educated women going to realize that a new power for good on future generations has been intrusted to them in this respect?"

In speaking of philanthropic and religious work, the Countess remarks that many such organizations have failed because the head was not cultivated as well as the heart, so that the lack of executive ability was everywhere apparent. The mention of this field of labor shows the need women have of the highest education. The Countess of Aberdeen brings out many fine points in favor of the higher education of women, but a word which she quotes from the prime minister will suffice as a close to the statements made: "Education was not meant to raise men and women out of labor, but to enable them to raise labor."

## FRANCE.

Statistics for 1891 represent France as having 2,750,621 girls studying in primary schools and 11,645 in public secondary schools (*lycées, collèges, and cours secondaires*). In 1891-92 there were 421 women in the university faculties, distributed as follows: Two hundred and forty-nine in letters, 29 in science, 129 in medicine, 14 in pharmacy. In 1894 there were 50 "*lycées or collèges de filles,*" with 10,011 pupils under instruction.<sup>1</sup> The first impetus to higher study came from the law of December 21-22, 1880, that of July 26-28, 1881,<sup>2</sup> from a decree of November 5, 1881, and from the promulgation of the law Camille Sée (so called) in 1882, which laws established *lycées* for girls, a higher normal for girls—training them for teachers in secondary schools—created a number of degrees for women only, and arranged that (when sufficiently prepared) women should be teachers in these secondary grade schools.

In the discussions before the Chamber of Deputies prior to the passage of this law M. Camille Sée laid stress upon the fact that the "law is at one and the same time a moral law, a social law, and a political law; it concerns the future and safety of France, for on women depend the grandeur as well as the decadence of nations."<sup>3</sup>

Under the Empire women were allowed to follow university courses and to receive university degrees. In fact, the university faculties have never really been closed to women, but this fact has hardly been realized until within a few years. When women requested to enter upon the lecture courses it was learned that there was no law against such admission. It was apparently between 1865 and 1875 that the "*Cours du Collège de France*" were open to women. At the Sorbonne they were admitted about 1872, and there is an increased attendance each year. In 1892 the legal faculty conferred the degree of doctor juris on a woman. In 1889 Mlle. Palbotier passed a successful teacher's examination at the Oriental Academy in Paris—being the first woman to pass this examination. In 1866-67 a woman passed the examination for the "*baccalauréat ès lettres,*" being the first woman to obtain this degree; but to-day there are several who have the bachelor's degree in letters or sciences, while many are licentiates in these courses. The majority of women pursuing higher studies in France—among them many Russian residents—seek for degrees in medicine.<sup>4</sup> "From 1866 to 1882, 109 degrees were conferred upon women in France. There have been 49 bachelors of arts, 32 bachelors of science, and 21 doctors of medicine; 98 degrees have been conferred in Paris alone."<sup>5</sup>

Courses of lectures for the intermediate grade of instruction for young girls were

<sup>1</sup> Statistics courteously furnished by M. Émile Levasseur, president of the Statistical Commission for Primary Education.

<sup>2</sup> *Bulletin des Lois*, Nos. 9987, 10855, and 11126 (see *Essai sur la Condition Politique de la Femme*, par Louis Frank).

<sup>3</sup> *The Woman Question in Europe*, by Theodore Stanton.

<sup>4</sup> From letter of M. Émile Levasseur, June, 1895.

established by M. Duruy, minister of public instruction, in 1867, but the most active developments came after the establishment in France, in 1882, of a school system based upon the best phases of the school system (so called) of America. The interest manifested in the woman's side of education is thus described by Théodore Stanton, who says that "the day before the Rouen College (lycée) was opened, in October, 1882, the names of 202 girls were already on the register. The Amiens College had during its first term 60 day and 40 boarding scholars. At Lyons, a very clerical city, although the college opened very late in the autumn of 1882, some 40 scholars were in attendance. When the Montpellier College, the first girls' college in France, was organized it had 76 scholars; at the end of the year more than 100, and during the autumn of 1882 the lectures were attended by 215 girls. The college at Grenoble began on April 17, 1882, with 47 girls, and in January, 1883, this number had risen to 112. This same tendency is seen in the lecture courses founded by M. Duruy, to which reference has already been made. Whereas in 1875 these Sorbonne studies were pursued by 165 girls, in the collegiate year 1881-82 there were 244.

"But the Government and the municipalities enter as heartily into the work as the women themselves. The Chamber voted, in 1882, 10,000,000 francs for the creation of girls' colleges. Rouen, one of the first cities to demand a college, found that it would cost 1,000,000 francs; the municipality forthwith contributed half that sum and the Government the other half. At the end of the first year after the promulgation of the Sée law the following results had been obtained: The foundation of a superior normal school for women at Sèvres,<sup>1</sup> the opening of four colleges, all the preliminary steps taken to the same end in 26 other cities, while similar negotiations had been begun by 38 other municipalities.

"In the school (or college) at Sèvres women are prepared for the lycées. Here they work for the certificat d'aptitude and the agrégation. The college is supported by the State; students on entrance sign an agreement promising to teach under the State ten years after leaving, and the successful candidates have the first right to vacant posts in public schools. Private classes may also prepare for these examinations; in particular the Collège Sévigné holds such."<sup>2</sup>

The courses of lectures in the university faculties are divided into "cours ouverts" and "cours fermés," which, as the terms signify, are open or closed. To the former all can go; to the latter only those who have passed the baccalauréat and taken a certain number of "inscriptions" are presumed to enter. There is great liberty, however, and few are turned away who desire to attend. At the Sorbonne classes are formed for those of both sexes who desire to prepare for modern-language examinations. In the university faculties the ordinary course for a degree is thus described by Miss Alice Zimmern:

"The baccalauréat is a kind of matriculation examination; the boys' lycées prepare their pupils for it, but it is open to all candidates, male and female. The licence is an intermediate examination, but for many it is the goal of their studies. At least a year must elapse before the baccalauréat and the licence. For the degree of doctor theses have to be written and sustained before the faculty. But a small proportion of students proceed to this degree."

Compared with the number of those who are hearers, few French women have qualified themselves for university degrees. Medical instruction for women dates from 1868 in the Paris medical school, but of the 169 women students now attending these courses only 16 are French; the Russians and Poles outnumber any other nationality.<sup>2</sup> Law students and those in theology are very few in number, as women find no career opened to them, but still they are not forbidden such study. Then

<sup>1</sup> The normal school at Sèvres, presided over by Mme. Jules Favre, wife of the famous statesman of that name, is considered to have wielded much influence. Mme. Favre died in the early part of 1836, but her influence will long be felt. Mme. Henri Marion now presides over the school.

<sup>2</sup> See *Women in European Universities*, by Miss Alice Zimmern; Forum, April, 1895.

there are industrial schools for girls, where in a three or four years' course they may receive instruction in modern languages, domestic economy, industrial designing, cutting and fitting of garments, bookkeeping, and accounts. Kitchen arrangements and workshops are attached to these schools, so that both theoretical and practical instruction may be given.

Woman in the medical and legal professions is treated under those heads at the close of this chapter.

#### BELGIUM.

The question of admitting women to the universities originated in 1875 when M. Delcour, minister of the interior, requested an opinion from the various faculties of the universities as to the advisability of admitting women. Liège and Ghent presented no reason for their exclusion, but suggested awaiting the result of such action in other countries. In 1880-81 they were admitted in the free (libre) university of Brussels, 3 women following the course in natural sciences; this number increased to 5 in 1882, and ten years later 75 women had received academic honors—of these 24 in natural sciences and 17 in pharmacy. According to the laws of May 20, 1876, and of April 10, 1890,<sup>1</sup> women can follow the courses of any faculty and obtain the diploma. They may exercise the profession of doctor and pharmacist, but not of lawyer. From 1882 to 1889 there were 156 women studying in the universities of Brussels, Ghent, Liege.<sup>2</sup>

An innovation, as it was considered, took place when, in 1892, two young ladies received employment in connection with the law courts in Antwerp. They took the place of two male clerks at the tribunal of commerce connected with the civil courts.

For years the Government has permitted women to act as telegraphers, telephonists, etc.

The "Ligue Belge du Droit des Femmes" has established conferences for women since 1890, in which the university professors give lectures in domestic economy, hygiene for women and children, anatomy and physiology, medicine, the science of education, social economics, elements of law, art of reading, civil and economic condition of women, and on the laws as they appertain to the woman question.<sup>3</sup>

The Belgian Association for the Advancement of Women urges a revision of the civil code so that both sexes may have equal rights before the law. Its members request the extension of professional education for women, a study of coeducation of the sexes in all grades of schools, equal pay to both sexes, wherever they do equal work, and the admission of both sexes to various official employments—morality, intelligence, and capacity being the only prerequisites. The discussions indicate the desire of the association, which now numbers more than 200 members, to benefit humanity by giving the woman her proper place before the law, in the hospital service, in connection with public charities, in all official employments, in the administering of school affairs, and by this onward movement to strengthen the woman's position in the family circle as well as outside of it.

An interesting presentation of this question is made by Isola van Diest, M. D.<sup>4</sup> She says:

"The situation of woman in Belgium is about the same as in France. \* \* \*

"A word remains to be said concerning the admission of women to the walks of higher education, and notably to the study of medicine. There existed in Belgium some years ago a law which required students who would enter the university to pass the examination of graduate in letters (*gradu  en lettres*). Candidates for this degree were expected to know how to translate Greek and write Latin. But as

<sup>3</sup>Revue Internationale de l'Enseignement, Avril, 1894.

<sup>4</sup>The Woman Question in Europe, by Theodore Stanton.

there were no schools where girls could study the dead languages with the thoroughness of boys, who were trained six years in the classics, the former were almost entirely shut out from enjoying the advantages of an university course. This graduate, however, no longer exists, and the entrance of women into our universities is now possible. Female students are found to-day at Brussels, Liège, and Ghent, but their number is still very small. It was in 1880-81 that the first woman entered the university of Brussels, but it was not until 1883 that their admission became general. They pursue, for the most part, scientific studies, thereby securing more lucrative positions as teachers, and pass their examinations for graduation with success. The higher education of women is still an open question in Belgium, and there are those who oppose it. But the experience of Switzerland, England, and France, not to mention other countries on both sides of the Atlantic, answers victoriously all objections. And does not the long list of the world's distinguished women prove that the female sex is capable of the highest intellectual culture? Not to go outside of belles-lettres and the limits of Belgium, we have Miss Nizet, Marguerite Van de Wiele, the Countess de Kerchove de Denterghem, the Loveling sisters, Mrs. Courtmans, Mrs. Van Ackere, and many others."

#### NETHERLANDS.<sup>1</sup>

The greater part of the schools in the Netherlands are mixed schools. Coeducation, which was prohibited in France a century ago by Condorcet, is a principle of pedagogy in the Netherlands. An interesting presentation of these coeducational schools might be made, but the intention here is to simply indicate the advance movements in woman's education. The primary schools have 323,415 girls in attendance; that is, boys and girls between 6 and 12 years of age are educated together. Groningen has a normal school for women teachers, and there are many normal courses which they attend. Of the 60 "middle" schools for boys, 40 had 371 girls in attendance in 1894, and there are 12 "middle" schools for girls only.

Young girls who wish to devote themselves to higher studies attend the courses of the gymnasia or colleges. There are in Holland 29 gymnasia or colleges, of which 4 are nonsubsidized. These belong to the communes, which have the authority to decide whether a college shall be mixed or reserved exclusively for young men. This year the Catholic provinces Maestricht and Breda have refused to open their colleges to young girls. In the Protestant provinces it is different. Thus, in Amsterdam 26 young women are enrolled in the "lycées;" in Rotterdam, 13. In every instance the boys show the greatest deference for their girl companions. A little roguishness is sometimes apparent, for the young men refuse to consider their young women companions as girls, and give them boys' names.

The courses of the four Netherland universities are accessible to women. Between 1880-81 and 1893-94 the celebrated university of Utrecht had 118 women enrolled. This year (1894-95) 53 young ladies were matriculated as students; in Groningen, 13; in Utrecht, 16; in Leyden, 11; at the communal university of Amsterdam, 15. Of these women 11 study medicine, 19 philosophy and letters, 12 natural sciences, 13 divers branches. Leyden, Utrecht, and Amsterdam universities have already graduated a number of women; several are following courses in fine arts; others follow the modern language course; still others seek the diploma entitling them to teach in secondary schools. Among the students at Amsterdam were women who pursued the studies of French and English literature, the old Dutch language, Greek, and Gothic art. Women have the same opportunities as men in the universities, and are allowed to enter for any examinations they may desire.<sup>2</sup>

Their progress in the medical and legal professions is described under the appropriate headings at the close of this essay.

<sup>1</sup> *Revue Pédagogique Belge*, 1894-95, and *Verslag van den Staat der Hooge-, Middelbare en Lagere Scholen in het Koninkrijk der Nederlanden*.

<sup>2</sup> *Essai sur la Condition Politique de la Femme*, par Louis Frank. Paris, 1892.

## DENMARK.

An article on the legal status of women in Denmark was published by Miss Nanna Kristensen-Randers<sup>1</sup> (exam. juris) in April, 1892, in the *Woman's Journal*, of Boston. Among other things she says:

"Teaching has been the principal work of women from ancient times, and they have not abandoned it because their range of occupation has been enlarged. On the contrary, women have chosen by preference the work of spreading knowledge and instruction, and here they have really done eminent service. In this respect we have had an excellent pioneer, Miss Natalie Zahle, who, in 1851, founded a school in Copenhagen both for children and grown-up girls. When, in 1860, women were admitted to appointments in public schools, she added to her institution a private seminary for women, from which in the course of time a great number of admirably prepared women have been sent out. In 1875 the University of Copenhagen was opened to women, and Miss Zahle immediately organized two new classes, where they might be fitted for the university. This large and excellent school, or rather collection of schools, has excited due admiration, as well in our own country as abroad. It is governed exclusively by women, and the teaching is chiefly done by them also. On the fortieth anniversary of the founding of the school our Government gave Miss Zahle the gold medal of merit. Only one Danish woman, the late actress, Mrs. Heiberg, had previously been honored with this token of distinction.

"Instruction is said to rank rather high here in Denmark, and this is especially the case with women. We have all the more reason to be proud of the fact, as they receive only a very small pecuniary support from the Government. The common schools are open to girls, but the higher schools are, as a rule, reserved for boys alone. Of late, however, a few of these schools have begun to admit girls.

"As mentioned above, women obtained access to the university in 1875, when they were given the right to pass all the examinations. The theological faculty, however, arranged a special examination for women. But they are not entitled to obtain employments nor to enjoy the stipends, legacies, etc., possessed by the university. Seventy-six women have passed the examination which admits to the university, and 8 of them have continued their studies. Four of these ladies have become physicians, two M. A.'s, and two have passed a higher school examination.

"Apart from these, our women students are about equally divided between the study of medicine, mathematics, natural science and history, philology, etc. One woman is studying political economy. Among our theologians there is no woman as yet. The author of this treatise in the summer of 1887 passed the examination in jurisprudence, and obtained immediately a situation with a lawyer. But the authorities did not think it fitting to appoint a woman as attorney, and our supreme court of justice was of the same opinion.

"Women who have never passed any examination frequent the University of Copenhagen in large numbers, as they have free access to the lectures, and two have received the university's gold medal for answering prize questions.<sup>2</sup>

"There may be mentioned, as contributing to the education of women, several good commercial schools, a drawing school, and an art school for women. It is also worthy of notice that every year from 1,600 to 2,000 girls, chiefly servants and peasant girls, spend three months at our high schools for the people.

"Among situations held by women may be mentioned, besides the traditional ones, appointments in banks and similar institutions and in telegraph and post offices. Dentistry seems to have some attraction for women. Several have become dentists, and women are admitted to a school of dentistry lately opened. No woman here has yet become an apothecary, but one has passed an examination as assistant.

<sup>1</sup> Miss Nanna Kristensen-Randers is connected with the Ollerup High School near Svendborg, on the Island of Funen.

<sup>2</sup> Miss Anna Hude received the medal for historical proficiency, and has been appointed assistant in the historical department of the Royal Archives.

"One woman has passed an examination at the agricultural school.<sup>1</sup> Instruction in horticulture is given to women. Among new occupations may be mentioned that of stenographer<sup>2</sup> in our parliament, a position held by two women. From what has been told here it will be seen that Danish women are now able to choose almost any work that suits their wishes and abilities."

As is stated above, the university was opened to women in 1875. According to article 3 of the decree of June 25, 1875,<sup>3</sup> women who have given satisfactory proof of their ability, when examined for the Artium, are permitted to follow the courses and present themselves for the examinations. The decree stipulates, however, that the obtaining of degrees does not permit the women to fill public positions, to receive university scholarships or pecuniary aid from the State.

From the industrial standpoint there is much to interest one in Denmark. A letter from Denmark of August 10, 1895, to the New York Evening Post refers to the high rate of intelligence among the agricultural population. A large number of high-grade industrial schools for men and women (of from 17 to 25 years of age) graduate many pupils annually who devote themselves to cattle raising and butter making. The women also become proficient in embroidery, silver work, pottery, cooking, joining, and cabinetmaking. An exposition held in Copenhagen in 1895 gave indications also of the intelligence displayed in these industries.

In Iceland, chief of the dependencies of the Crown of Denmark, an ordinance of December 4, 1886, conferred upon women the right to receive the degree of "bachelier ès lettres," and admitted them to the schools of medicine and theology in Reykjavik. For the course in law they go to the university in Copenhagen. Women may practice medicine, and may present themselves for examinations in philosophy and theology. Their success in obtaining degrees does not permit them to become Government functionaries, however.<sup>4</sup> Since 1882 women have been permitted to vote in connection with local administrative offices<sup>5</sup> and in the selection of the clergy of the parish. The instruction of young children in Iceland is given by the fireside, the mothers being the earliest teachers. Special schools for girls exist, where they are taught higher branches, needlework, and housekeeping, but it is the mother who (together with the clergyman) watches over the daughter's education in her earlier years.<sup>6</sup> Should the children fail to be prepared for confirmation great would be the chagrin of the parents, and especially of the mother. The long winter evenings are especially devoted to reading, to the study of folklore, and to inculcating knowledge of events in the country's history.

#### NORWAY.

The status of women in Norway may be learned from the following statements: A law of May 22, 1869,<sup>7</sup> "permitted the employment of women teachers in lower grade elementary schools;" a law of 1878,<sup>8</sup> "admitted women to graduation examinations from the middle schools;" one of 1882 "permitted women to enter for the 'examen artium' and 'examen philosophicum.'" This law was complemented by that of June

<sup>1</sup> Fröken Sofie Lauridsen passed the examination, and has been appointed manager of a farm belonging to M. Tietgen, an eminent Danish financier. This is the first instance, perhaps, of a woman's skill in agriculture being officially recognized.

<sup>2</sup> Miss Grundtvig is stenographer of the House of Representatives (Folkething) in Denmark and also director of Kvinden og Samfundet, a journal devoted to the interests of women and of society, organ of the Danish Association for Woman's Emancipation.

<sup>7</sup> *Udkast til lov om det lavere Undervisningsvæsen i Kjøbstæderne*.

<sup>8</sup> *Lov om offentlige skoler for den høiere almindennelse*.

14, 1884,<sup>1</sup> which admitted women to university privileges, gave them the right of being examined, of taking the academic degrees, and of receiving scholarships and the benefit of legacies accorded to the universities. Since June 26, 1889,<sup>2</sup> they are also eligible to positions on school committees; in rural communes they have equal rights with the men in voting for the budget for all school matters, and for the appointment of inspectors. Women are also eligible to the position of inspector, and in 1890 there were four women elected on the visitors' board for the schools of Christiania. In Norway women have for the last six years been entitled to study pharmacy and to manage and own dispensaries, subject to certain conditions. In Russia, Finland, and Denmark there are also female apothecaries. Women are also studying arts and sciences in the University of Christiania. Higher normal schools have lately been opened by the Government for them, as an outgrowth of the results of the private training schools for teachers which have been in existence for years. A woman's course in manual training is now a feature of one of the largest private schools in Christiania.

In the "Beretning om Skolevæsenets tilstand i Kongeriget Norge for aaret 1890," it is said that 117,089 girls were under instruction in the common schools, that 18 private secondary schools for girls had 3,157 students, while 365 girls had passed the intermediate grade examinations. Evening schools for girls had 1,246 pupils; the courses for teachers of gymnastics were attended by 42 women, and 83 women received certificates from normal schools permitting them to teach in lower grade schools. The school of arts and trades at Christiania had 131 women in its courses; at Skien a drawing class had 23 girls attending; in three schools 28 women teachers were instructing in cutting, drawing, embroidering, etc.; a commercial school in Christiania had 58 girls in its classes. The number of women at the university does not appear either in that report or in the *Universitets og Skole annaler*.

#### SWEDEN.

The subject of woman's education in Scandinavia has been presented by Mesdames Collett<sup>3</sup> and Olivecrona.<sup>4</sup> The former says "Sweden stands first among our northern States in the movement for the elevation of women. She early outstripped them in a more lively and general interest in women's rights, and the result is that to-day the country is blessed with many noble reforms in this direction. This striking fact is unquestionably due to the liberal sentiments which Swedish men entertain for women themselves, as well as for the cause which these women advocate. From early times the men of Sweden have been considered to represent the specifically chivalrous virtues of our northern climes, and if the daughters of the land have not yet reaped the full benefit of this inestimable national trait, now assuredly the harvest time has come."

Frederika Bremer, in a novel called *Hertha*, published in 1856, first called attention

<sup>1</sup> *Essai sur la condition politique des femmes*, par Louis Frank.

<sup>2</sup> *Lois du 26 juin 1889.*—*La femme au point du vue du droit public*, par M. Ostrogorski, 1892.

<sup>3</sup> Mrs. Camilla Collett, the celebrated Norwegian romance writer, whose eightieth birthday was celebrated in Christiania in the early part of 1893, is a sister of the great Norwegian poet, Henrik Wergeland. At the head of the woman's movement in Norway, she has published many books of travel, literary criticism, stories, poetry, and is recognized as a woman of lofty ideas and profound judgment. It is said that no private person in Scandinavia, except perhaps Frederika Bremer, has done more to raise the respect for the northern woman. She died in the spring of 1895.

<sup>4</sup> Mrs. Rosalie Ulrica Olivecrona, wife of one of the most distinguished jurisconsults of Scandinavia, was born in Stockholm in 1823. For four years she was a teacher in South Carolina, where her favorite study, botany, led her to collect a herbarium of American plants containing more than 400 specimens. She has written numerous essays on social and educational questions, biographies, stories, and poetry; aided in founding "*Tidskrift för Hemmet*;" became a member of scientific and archaeological congresses, etc. Mrs. Olivecrona took a leading part in organizing the Swedish department of woman's work at the Vienna Exhibition and at the Philadelphia Exhibition. At the request of the Swedish commissioners her "*Weibliche Arbeiten, Schweden*" was translated into English for the Centennial, and into French for the Paris Exposition of 1878.

to what was considered to be injustice toward woman, and she may be considered the pioneer in the reforms which have aroused attention and proven that Swedish women, too, desire the highest form of education. Mrs. Olivecrona says:

"The movement for improving the education of women may be said to have been inaugurated by the establishment of the Wallin School, in 1831, through the efforts of Prof. A. Fryxell, the eminent historian. The next step was the opening, in 1859, at Stockholm, of higher classes for young ladies by some influential men who were eager to raise the level of female instruction. The tuition, which was gratis, was given in the form of lectures and private recitations, and embraced religious exercises, the natural sciences, mathematics, history, Swedish grammar and literature, French, hygiene, and drawing, the scholars being at liberty, however, to choose their subjects. This course of study was continued for three years, and having met with great success it led to the foundation of the Royal Seminary for the Training of Female Teachers (Kongl. Seminariet för bildande af lärarinnor), which was opened at Stockholm in 1861."<sup>1</sup> \* \* \* A normal school established in 1864 served as a preparatory school to this seminary and also "with the object of affording its students an opportunity of gaining some practical insight into the art of teaching." This school has been instrumental "in forming a staff of able and well-trained female teachers, who now are spread all over the country. The result is that in the present day (1892) no town with a sufficient population to maintain a higher school for girls will remain unprovided with one."<sup>2</sup>

In Stockholm there are eight or more schools of high grade for girls, all with the aim of giving women a good and thorough education. Gymnasial or advanced studies are added to the curricula of some of these schools to prepare pupils for university courses. In other cities of Sweden the higher education of girls is sanctioned, and it is stated that as early as 1883 there was scarcely a "provincial town of note which had not one or more high schools due to private munificence or supported by the community. Most of them are in charge of graduates of the Royal Seminary, at Stockholm, which is thus extending its beneficial influence all over the Kingdom. Several good and well-organized boarding schools are also to be found in the country."<sup>1</sup>

"Instruction for girls is, however, not gratuitous, as is the case in the public schools for boys, but there is a Government grant which makes it possible to furnish tuition to many scholars in straitened circumstances.

"The Swedish capital contains many special schools which are frequented by women. The Royal Academy of Fine Arts was, in 1864, made accessible to female students, but the number being limited to 25, many aspirants are annually turned away. The Industrial School was first opened to women in 1854. About 800, of whom a large proportion pursue technical studies, attend yearly this institution and are allowed to compete for prizes. The telegraphic school, founded by the Government, has many female pupils. There are more than a dozen commercial and calligraphic institutes which admit them. Several are conducted by ladies. The Royal Central Gymnasium is open to women who desire to teach or study gymnastics. As early as 1820 female pupils were admitted to this institution, and about 1864 a regular course of training was established for women."

Women have been admitted also to the Royal Academy of Music since 1854, and they have passed the examinations for organists, which includes harmony, singing, playing of the organ and piano. The position of musical director has also been attained by one lady, at least, who passed (after five years' study) the above-mentioned examination; also in counterpoint, the history and æsthetics of music, on the piano, violin, etc.

There are many women teachers in Sweden, and "even in grammar schools for boys competent women are accepted as teachers. Many have obtained diplomas as

<sup>1</sup> Mrs. Olivecrona in *The Woman Question in Europe*, by Theodore Stanton.

<sup>2</sup> Mrs. Olivecrona in *The Woman's Journal*, April 23, 1892.

gymnasts, and practice with success, both at home and abroad, pedagogic as well as medical gymnastics."<sup>1</sup> All trades and industries are open to women, and there is scarcely any branch of industry in which women are not found.

The fine arts are cultivated by Swedish women, several of whom have obtained distinction as musicians, painters, and sculptors; they have become proficient in the arts of engraving on wood and glass, in wood carving, lithography, modeling, painting on porcelain, and designing, map making, and photography. To these may be added art needlework, which has developed—since 1874—through the efforts of the Society of Friends of Manual Arts. This society aims to save ancient patterns and to revive modes of workmanship practiced by women of bygone days, and to introduce new modes based upon early national art.

Feminine *slojd*, taught to girls of from 7 to 14 years of age, under the supervision of the "Slöjd Inspektörin," Miss Lundin, was so fully described in the Report of the Commissioner of Education for 1891-92 (pp. 428, 429) that this phase of woman's training is here omitted.

The university education of women in Sweden was quite fully treated in the reports from the Swedish ladies' committee to the World's Columbian Exposition at Chicago, 1893. The statements are here appended:

"In Sweden women are found as teachers, head mistresses of schools, members of school boards, lady inspectors, authoresses in pedagogics, etc. The common (or national) school education has always been the same for both sexes, but parents not desiring to send their girls to such schools send them to the higher schools for girls, or to private classes, or have them taught at home by governesses. There are 124 'Högre elementarskolor för flickor' which fall under two heads: Endowed schools, having a State annual grant not exceeding 2,000 crowns. They are under State control, but at liberty to plan their instruction independently. They number 76. The schools not endowed belong to parishes, corporations, or private individuals. Connected with these schools are continuation schools, preparing for admission to the university or to the higher training college (admitting pupils at 18 years of age to a three years' course of training as teachers of the higher grade schools). They also train teachers or give a general education for practical occupations. Then there are the people's high schools for girls, belonging to the former class. They give general education and training in manual work. Free lectures on ethical-religious subjects are given in connection with these schools. Housekeeping schools, cooking schools, instruction in dairy work, instruction in needlework to teachers, schools for home *slojd*, all aid in the development of woman from the Swedish standpoint.

"The two universities in Sweden, that of Upsala and that of Lund,<sup>2</sup> were founded, respectively, in 1477 and 1668. From both women were excluded.

"It was not till the fourth decade of our century and in consequence of the movement for woman's rights, as well as for a higher standard of female education, that a call arose for the abolition of such an antiquated statute.

"At the Riksdag of 1865 a Swedish yeoman, Carl Johan Svensén, presented a bill for the admission of women to the universities. This bill occasioned a lively debate; one side pronounced woman to lack both physical and psychical power to carry on learned studies; the other side showed how unreasonable it was to form a decided opinion on that question when no opportunity had been given woman to try the power of her intellect. Her fitness for the professions of teacher and physician was specially put forth. The result of the debate was a petition for the intervention of Government demanding for women the right to pass the examinations prescribed by the law for becoming teachers and physicians.

"On the 3d of June, 1870, a writ was issued conferring upon woman the right of

<sup>1</sup> Mrs. Olivecrona, in the *Woman's Journal* of April and May, 1892.

<sup>2</sup> There are two private universities at Stockholm and Göteborg which are only a few years old. They admit women. The former has a department of mathematics and natural sciences, also of the humanities; the latter has at present a department of humanities. (Thesis of Dr. N. G. W. Lagerstedt, presented at Chicago Exposition.)

passing the examination for the university, and of matriculating at the universities, and of following the profession of a physician. Since that time the number of female students has been increasing year by year. This number, however, only comes up to about 1 per cent of that of the male students, who, however, in proportion to the population are too numerous.

"During the first years the young ladies passed their examination at some boys' school, but since 1875 the right of qualifying for the university has been conferred upon girls' schools also. At the present moment there are at least five schools that prepare female pupils for this examination.

"The examination for the university is passed either in the classical division (latinlinien) or else in the mathematical division (reallinien).

"The classical division comprises the following compulsory subjects of examination: Swedish composition, theology, Latin, French, German, mathematics and physics, history and geography, zoology and botany, and propædæutics of philosophy. Optional subjects are: Greek, Hebrew, and English; one of these languages is, however, obligatory.

"In the mathematical division classical languages are not studied, but the claims on knowledge in the three modern languages—German, French, and English—in mathematics, and in physics are greater than in the classical department and, besides, chemistry has to be studied.

"Most of the women have passed their examination in the classical department.

"Of the young ladies who have passed the examination for the university only about 38 per cent have matriculated at the universities. Some have gone back into private life and some have found employment as post, railway, or bank officials, or else as teachers. \* \* \*

"The theological faculty in the universities is not open to woman.

"At the faculty of jurisprudence there are several examinations, out of which the one for a 'candidatus juris utriusque' is the principal of those most commonly taken. It requires about five years' hard study. This examination has been passed by one lady, Miss Elsa Eschelsson.

"The course of study in the medical faculty extends over seven to nine years from the time of matriculation. Only two ladies, Miss Karolina Widerström and Miss Hedda Andersson, have hitherto finished their medical studies and are practicing as physicians, but a considerable number of women are studying medicine.

"The medical faculty in Stockholm (Karolinska institutet) is opened also to the ladies and follows the same rules for the examinations.

"The studies for the medical degree in Sweden are by some people considered to take too long a time. Surely the expensive studies are a drawback to many women in choosing this profession.

"The philosophical faculty is divided into a philological section and a mathematical-scientific.

"The examinations within both these sections are (1) baccalaureate (= filosofie kandidat), requiring several compulsory subjects arranged in different groups, and (2) licentiate, a scientific examination comprising one principal subject and two secondary ones.

"A licentiate, after having written a scientific dissertation and successfully defended the contents of it against opponents, chosen by the university, is created 'doctor of philosophy,' under ceremonies which have been in practice for hundreds of years.

"The baccalaureate with certain compulsory subjects and followed by one year's teaching at one of the State schools, qualifies for minor tutorship at these schools. The licentiate entitles to higher tutors' appointments.

"About 23 women have passed the examination first mentioned, whereas the licentiate has hitherto only been passed by one woman, Miss Ellen Fries, who publicly defended her dissertation, and was created Ph. D. in 1883.

"Several women have studied at the philosophical faculty without passing any examination, some have later on applied themselves to scientific work. The latter is particularly the case with those having studied zoology and botany at the faculty of sciences of Stockholm. This faculty, founded in 1878, has, like the faculty of philosophy and philology of Gothenburg, founded in 1890, from the first opened its lecture halls to woman. Sonja Kovalevsky, a well-known Russian mathematician, was for some years attached as professor to the former.

"The Swedish universities in Upsala and Lund—in spite of their old statutes, having no close colleges as is the case in England, for instance—present no difficulty to women for matriculating as university students.

"With their male fellow-students they have partaken in public and private instruction, they have also entered as members of the province clubs, into which the students divide themselves, and of other societies existing at the universities."

In Sweden among the most noted of societies for women are the Frederika Bremer Torbundet, which is a center for all literary and educational questions, and the Gift Dvinnas Eganderrätt, which presents the legal side of questions. Graduates from Swedish universities can hold a position in all higher schools, either for boys or girls. In commerce and medicine woman has many of the privileges accorded to man in the Scandinavian countries. (Reports from these societies.)

#### GERMANY.

The subject of the higher education of women in Germany is one of interest, but in the German-speaking countries there is less to be said in regard to that development than in some of the other countries of continental Europe. Dr. Wychgram,<sup>1</sup> director of the higher school for girls in Leipzig, says:

"Higher educational institutions for girls in Prussia, as throughout Germany, are due to private initiative, and their earliest mention was at the close of the eighteenth or the beginning of the nineteenth century. Established in parts of Germany then under French domination, they were taken in charge by the cities after the wars of 1813-1815. Differing greatly in the early part of the century, it is noticeable that after the formation of the German Empire (1871-1872<sup>2</sup>) these schools greatly developed. In the autumn of 1872, through the efforts of Dr. Noeldeke, of Hanover, the general German Association for the Higher Education of Girls came into existence. The unification of schools for girls, with a similar basis for all Germany, was its main object. Baden, Württemberg, Hesse, and Saxony gave official sanction to schools of a secondary grade; programmes were formulated, while in Prussia (in 1873) Dr. Falk, minister of ecclesiastical affairs, called together directors and directresses of girls' schools to deliberate upon the question of the education of women. The main demand made by the convocation was that of a recognition of the necessity of girls' schools of a higher grade. Owing to change of university and other causes, but little was accomplished, and the efforts were carried on but feebly until 1893, when the minister of public instruction announced general regulations for the higher education of young girls. These regulations were published in May, 1894, but they failed to recognize the girls' schools as educational institutions of a secondary grade, thus failing to give them the governmental sanction and position accorded in France. Still they are placed under the supervision of provincial school authorities. Another disillusion to those working for this movement was that, on plea of looking after the health of girls, only a nine years course (instead of ten, as formerly) was accorded to these schools, but, as Dr. Wychgram naively remarked, 'in that period the girls were expected to learn all the studies of a ten years course.' At the close of the sixteenth year the girls may join complementary courses, if they so desire, in history, the history of literature and art, natural history, and foreign languages, or even other branches, if sanctioned by the director. Thus girls may prepare themselves

<sup>1</sup> *Revue Internationale de l'Enseignement*, 15 Mars, 1895, pp. 245-260.

<sup>2</sup> The constitution of the Empire bears date of April 16, 1871.

for careers. Care is taken not to overburden the girls with home studies during the school course, an average of from one to two hours' work being all that is allowable at home."

During vacation period no study is allowed. The nine years course is as follows:

|                       | Elementary course. |       |      | Secondary course. |    |     | Higher course. |     |    | Total.    |

"This programme of study is worthy of praise," says Dr. Wychgram; "the professor is left certain individuality of action. The home language (German) is taught analytically; foreign terms, which have crept into the language, are proscribed; the richness of the German literature is clearly made manifest. Composition is taught in its highest form, and the best types of poetry and prose are placed before the pupils. The arithmetical study aims to render the pupils capable of rapid solving of problems which deal with matters of everyday life, domestic economy, savings, care of one's fortune, etc. The study of history deals with ancient history, and brings one to present conditions in the different civilized nations, nor is patriotism neglected. Geography is studied from the physical and political standpoints; natural history includes the most important details pertaining to living things in their relation to man, also general hygienic rules; natural sciences include physics and chemistry, with special application to home life; the term manual training signifies more especially feminine handiwork, repairing, planning, and executing; also capability of judging of material employed in such work. Gymnastic exercises cover freedom of movement, tight lacing being avoided, swimming, skating, plays if not too rough, and general exercises for strengthening the body. One special course of satisfaction to those interested in these higher educational movements for women is that women are to be employed as teachers in some one of the classes of the higher division, for heretofore male teachers have had the preference in school work, but this higher educational movement is calling out the latent energies of the women, and the authorities are permitting her to prepare for such position and giving examinations for the purpose of teaching in these schools for girls. In Prussia courses preparing for such positions have been established at Berlin and Göttingen; women follow the courses for two years, during which they have opportunities for practical exercises, and then are authorized to take the examinations for professorships in the higher classes of girls' schools. The results of this plan are not yet proven, as the examinations take place in a year and a half. These efforts are watched with much interest in a wide circle, and at a meeting held in Berlin on October 4, 1894, the director supervising the schools for girls and who is connected with the ministry of ecclesiastical affairs, and the president of the Association for the Higher Education of Women discussed the situation freely. Their general attitude seemed to favor the new regulations, but they earnestly advocated a ten years' course (instead of nine) as requisite for the higher development of women, the optional complementary courses not being considered adequate for the purposes desired. They strongly urged the need of scientific training for women sanctioned by the Government, and also

the necessity of women as an adjunct to the director of these higher schools for girls. They also regret that the highest institutions for girls are not recognized and officially sanctioned by the Prussian authorities."

The progressive movements in connection with the higher education of women in Germany have been due in part to associations having the improvement of woman's condition in view. Attention was first directed to the many teachers and governesses out of employ, to the status of seamstresses, to women connected with commercial pursuits. In the early sixties a woman teacher's position in a Berlin school was vacant, and 114 women applied for the place. A monograph was presented in a meeting of the Central association for improving the working classes (Central-Verein für das Wohl der arbeitenden Classe), and as a result of the discussions the Lette-Verein was created, which in 1866 had 332 members and in 1883-1890 about 1,100.<sup>1</sup> The main object of the association was to aid women to carry on industrial work, but gradually different kinds of schools were established—such as industrial and commercial schools, cookingschools, those for the study of telegraphy, printing, domestic economy, modeling, etc. By degrees the success of the undertaking led to the establishment, under the auspices of the Lette-Verein, of schools giving a high grade of study to women, such as would prepare them for examinations similar to those in the gymnasia for boys and for university examinations. Other associations were established with the object of ameliorating the condition of women, among them the Allgemeiner Deutscher Frauen-Verein, located in Leipzig, which has been in existence since 1865, and is conducted solely by women, in contradistinction to the Lette-Verein, which owed its inception and organization to men. The Allgemeiner Deutscher Frauen-Verein presented petitions to the governing bodies of Saxony requesting a better status for women teachers, and as early as 1872 the higher education of women was advocated, so that they might be fitted for university courses and for the professions. In 1884 a fund was established which paid for two women students in medicine at Zurich University, and other amounts for higher study have been received since. The Frauenbildungsreform-Verein, established in Weimar in 1888, has scientific study, parliamentary forms, and various phases of the woman question as object. Various petitions were sent to the governing bodies of the different German States between 1888 and 1891 requesting the creation of gymnasia for girls (Mädchen-Gymnasia) so as to prepare for university studies. This association recognized the developments in secondary schools for girls—such as lycæums for girls (höhere Töchter-Schulen), etc., but its members desired the strictness of course and examinations found in the "humanistische Gymnasia" for boys.

On September 16, 1893, a Mädchen-Gymnasium was established in Carlsruhe, through the efforts of the Frauenbildungsreform-Verein, with similar instruction to that for boys. The girls must have finished their twelfth year, have had a six years course in girls' higher school. The annual fees are 200 marks (\$57.60). A similar gymnasium for girls was established in 1893 in Berlin, but it differs from that of Carlsruhe, as it requires graduation from the girls' higher schools (höhere Töchter-schulen), so that only a three or four years course is required in the gymnasium. Its object is to prepare women for university courses and for teachers in higher schools and academies, and to aid them in acquiring the scientific knowledge requisite for medical study.

In Danzig in 1891 real courses for women (Realkursen für Frauen) were opened. Girl graduates of high schools, or those having equivalent knowledge, were to be admitted to these courses, which are both theoretical and practical and are intended for women who desire to follow university courses, to prepare for a profession or for the teaching fraternity. Similar "Realkursen" were established in Berlin several years ago. The new gymnasia for girls and the real courses are due in the main to the different women's associations. The Berlin Vereinigung zur Veranstaltung von Gymnasialkursen für Frauen states that graduates from the "Mädchen-Gymnasia"

<sup>1</sup> Deutsche Rundschau, März 1896; Lexikon der Pädagogik, von Ferdinand Sander.

will be admitted to the philosophical and medical faculties of German universities. The plan of studies of Mädchen-Gymnasia is modeled upon that of the gymnasia for boys and includes Greek, Latin, mathematics, German, English, French, philosophy, the natural sciences. The fees for this gymnasial study are between 200 and 250 marks (\$57.60 to \$69.50), and with board for nonresident students, 1,200 to 2,000 marks annually (\$285 to \$576).

According to the "Bestimmungen über das Mädchenschulwesen die Lehrerinnen-bildung und Lehrerinnen-Prüfungen vom Monat Mai 1894," women teachers are to be required to pass more rigid examinations in future, but if proficient they are to be permitted to teach in one of the three upper classes in the girls' higher schools and to be associate principals with men, instead of being relegated to secondary positions.

These statements point to the fact that a reorganization of schools for girls is taking place in Germany; the new regulations of May 31, 1894, indicate important advancement in woman's education. Formerly women were only admitted as teachers in elementary schools or lower grade secondary schools. According to these regulations every place connected with secondary schools is opened to them. A second examination, called "wissenschaftliche" or "Oberlehrerinnen-Prüfung," in two special subjects permits the undertaking of original work. The training is similar to that in German universities for men. The opportunities for German women in the universities have been few in number, although the Prussian minister of education has been memorialized frequently to give women the same privileges as men in the universities.<sup>1</sup>

Among the different institutions for the higher education of women is the well-known Victoria Lyceum, in Berlin, which has lately celebrated its twenty-fifth anniversary. Established through the efforts of a Scotch lady, Miss Archer, of Edinburgh, it is under the patronage of the Empress Frederick. Commencing with about 100 students, it now has 1,400, who are pursuing a higher course of study, similar to a university course. Lectures are given in philosophy and natural sciences, but the lyceum is not empowered to grant degrees.

The different associations and the women engaged in special lines of work desired still other educational privileges, and in 1888, through the influence "of the Empress Frederick, a small sum of money was granted toward establishing advanced classes for teachers. These were to be on the lines of what is known as a university seminar. Each course was to occupy three years; the treatment to be thoroughly scientific and lead to independent work<sup>2</sup> from original authorities. At the end of the three years there was to be an examination, which it was hoped would win good posts in schools for the successful candidates. On these lines the examination was first held in 1891."<sup>3</sup>

Soon afterwards Göttingen opened courses of lectures, which were given by university professors, an attendance upon which required the passing of the teachers' examination, with five years' practice as teacher additional.

To be prepared for entrance into the German universities the maturity examination (Abiturienten examen) of the gymnasia is requisite. This is absolutely necessary in Prussia, but in some of the German States "the certificate of a Real-gymnasium suffices."<sup>3</sup> Even if this examination has been passed, there are still obstacles to overcome before women can become regular students. In Berlin the professors are generally opposed to women students, but, "as a matter of fact, six women are attending lectures here"<sup>3</sup> (1895). At Göttingen "a few women, chiefly Americans and English, have attended single courses by special permission."<sup>3</sup>

"At Heidelberg women may attend lectures in the scientific-mathematical faculty,

<sup>1</sup> London Journal of Education, September, 1894.

<sup>2</sup> The German University aims to equip for independent work rather than to train a largely cultivated class with no particular object in view.

<sup>3</sup> Miss Alice Zimmern in The Forum, April, 1895.

but only as Zuhörerinnen and by permission of the professors concerned. They may also take the doctor's degree in this faculty, and, in special instances, in the philosophical faculty, too, the condition in both cases being that the course of study leading up to the degree must be pursued at Heidelberg. The permission to attend confers no right to do so, however, and it may be withdrawn arbitrarily and at any time. The Zuhörerin has no rights.

"At Leipzig, as heretofore, women may attend, by permission, many of the courses of lectures, but they may not take a degree, and they are in no case recognized as members of the university.<sup>1</sup>

"At Jena similar conditions prevail, only here the required permission is still more difficult to obtain, application having to be made, first, through the university Cursus, to the grand ducal patron of the institution, and after that, in second instance, to the professor himself.

"At Freiburg women may attend as guests, Hospitantinnen (which is only another word for Zuhörerinnen), the lectures in the philosophical and medical faculties."<sup>2</sup>

The attendance at medical lectures is not of great value to women students, beyond the discipline of study, until the State opens its medical examinations to them.

On April 29, 1895, it was cabled from Germany that Miss Grace Chisholm, an English woman, had just taken the degree in philosophy at the University of Göttingen, with the express permission of the Prussian minister of education. This is the first degree ever taken by a woman at Göttingen since it became a university. It is stated that the Emperor has heretofore opposed the admission of women to the universities, and this is supposed to indicate a change of policy in regard to the higher education of women.

It is also announced from Berlin that Dr. Bosse, the minister of public instruction, has just sanctioned the admission of the daughter of an ecclesiastic to the Abiturienten examination at one of the Prussian gymnasiums. Minister Bosse's decision overruled that of the provincial pedagogic board, which refused the application, so that this decision has an important bearing on the future status of the higher education of women in Prussia.

#### AUSTRIA.

In the Austro-Hungarian Empire somewhat similar conditions exist in regard to the education of women as have been described under Germany.

Efforts are being made by those especially interested to give a higher grade of instruction to women desiring it. An article by Frau Johanna Leitenberger, author-ess and essayist, gives the general trend of educational movements:

"The women's movement in Austria has had two phases,<sup>3</sup> the economic and the educational. \* \* \* Institutions for the preparation of women for active employments are continually appearing everywhere in Austria. In the front rank stands the Women's Industrial Society (Frauen-Erwerb-Verein), which was founded at Vienna in 1866, and which has grown every year in usefulness and importance. In 1874 the society opened its school for the industrial training of women, and workshops, art studies, schools of design, etc., soon followed. A class in lace making is connected with the school, and the children of the poor lace makers of the Erzgebirge, of Bohemia, are taught gratuitously. But the aim of the society<sup>4</sup> is not simply to train the hand; it would also develop the intelligence of its pupils. It has, therefore, established a commercial school, formed classes in the French and English languages, and during the winter season courses of lectures on various artistic and

<sup>1</sup>The position of women students is peculiar at Leipzig University. Some pay fees, others do not; they have no status, and can not obtain degrees.

<sup>2</sup>The Nation, September 27, 1894.

<sup>3</sup>Johanna Leitenberger in *The Woman Question in Europe*, by Theodore Stanton.

<sup>4</sup>This society has 771 regular members, is worth \$70,000, and supports 16 schools and courses, which are attended by 1,666 pupils, 248 of whom are receiving a high grade of tuition.

scientific subjects are delivered under its auspices by competent professors and scholars. \* \* \*

"If we now turn to the general education of women, we find that great progress has been made during the past ten years, especially in Austria. The public and private schools for girls are infinitely improved. The establishment of girls' lyceums (Lyceen), which aim at the higher and broader education of women and which cover almost the same ground as the boys' gymnasiums, was a great step in advance, although they are far from meeting all the demands of the new era. Gratz has an excellent lyceum. \* \* \* The normal schools for training female teachers are of a superior order in many of the Austrian cities. \* \* \*

"The Society of Austrian Teachers and Governesses (Verein der Lehrerinnen und Erzieherinnen in Oesterreich), founded in 1870, takes care of the intellectual and material interests of its members. Its work may be classed under three heads: (1) Normal school and scientific instruction; (2) the spreading of rational ideas on female education; (3) the aiding of needy members. These objects are accomplished by lectures and discussions on pedagogic and scientific themes, by the use of a library and reading room, by participation in teachers' meetings and congresses, by the publication of the proceedings of the society in the newspapers. \* \* \*

"Although the doors of our universities are closed to females,<sup>1</sup> we possess many women who have pursued their studies abroad and who have acquired a reputation for their learning. Miss Rosa Welt, of Vienna, for example, is a graduate of Berne. During the summer semester of 1879 she attended the lectures on ophthalmology of Professor Mauthner, of Vienna, was admitted to the Rothschild hospital, directed by Dr. Oser, and was at one time mentioned as likely to become the assistant of Professor Pfliiger, of Berne, on diseases of the eye. The wife of Dr. Kerschbaumer, who has an institute at Salzburg for the cure of diseases of the eye, studied medicine at Vienna, became her husband's assistant, and now aids him in all operations and sometimes performs them herself. The orientalist, Mrs. Camilla Ruzicka-Ostoic, who has spent six years at the Imperial Academy of Oriental Languages in Vienna, and has passed brilliant examinations in Turkish, Russian, and Arabic, received from the Emperor a gold medal for her dictionary of Turkish-German transcriptions, and from the King of Bavaria the Ludwig's gold medal for art and science. In 1881 she established at Vienna a private school for instruction in the Oriental tongues, and gave free courses of lectures to ladies on the Turkish language. Miss Sofie von Torma has done some very good work recently in the investigation of antiquities at Siebenbürgen. She has a book almost ready for publication in French and German, and has lectured on her discoveries. Prof. A. H. Sayce, of Oxford, and Dr. Schliemann have both spoken in high terms of Miss von Torma's excavations. Miss Emilie Hörschelmann has lectured with success to women in Vienna on the history of art. Miss Amalie Thilo, principal of an important girls' institute at the capital, is well known for her lectures on pedagogics, that on the great names in the history of education being specially worthy of mention. In 1881 Miss Helene Druskovich, Ph. D., spoke before a large audience under the auspices of a Viennese society, and showed a large acquaintance with the Italian and other foreign literatures. Miss Susanna Rubinstein, Ph. D., has made a name both at home and abroad by her lectures and philosophical works. These are a few names selected from a long list of women who have proved that intellectual power is independent of her sex."

In Vienna modern movements in favor of the education of woman are indicated by the opening of a gymnasium, or secondary school for girls, through the efforts of the Wiener Verein für erweiterte Frauenbildung. This gymnasium, opened on October 10, 1892, has as its object the more thorough education of young girls in the higher educational branches. A similar society for the educational advancement of young women has been established lately in Budapest; its special aim, however, is to see that preparatory training for the medical and philosophical faculties of the university is given to young women.

<sup>1</sup> See statements in regard to the opening of the Hungarian universities mentioned later on.

The syllabus for 1895-96, sent out by the Wiener Verein zur Abhaltung akademischer Vorträge für Damen, indicates that this lecture course covers the field of science and literature quite thoroughly; even the literary study of modern languages is included. Most of the lecturers are "Universitäts-Dozenten," but a well-known painter will read about the history of art, and two actors from the Hof-Theater will give instruction in elocution and recitation.

Mme. Josephine Humpal-Zeman describes the attempts to benefit the women of Bohemia who, "like all Slavonic women, were always perfect helpmates of their 'stronger brothers,' good mothers and housewives, always busy. Still they were not deaf to the call of rising womanhood throughout the world, and in a comparatively short-time they have been able to produce more than 300 volumes of literature, besides numberless articles in various magazines and newspapers. They have started societies, the most prominent ones being those of the Red Cross, women's industrial unions, literary societies, and the well-known American Club of Bohemian Ladies, of which Miss Dix speaks in her memoirs, and the most important of all—the Minerva—a society for the higher education of women.

"This society, founded in 1891, sent a petition to the Emperor, asking him to open the doors of the celebrated University of Prague to women. The reply was that as soon as Bohemia shall have her young women prepared, this may be done. Then it was that the brave and gifted Eleuca Eliska Krásnohorská began her heroic undertaking. At that time there were no gymnasia in Central Europe, and the Bohemian women had to begin in an entirely new and untrodden path. Again, as in the time of Huss, Bohemia was to light the torch, so that others could see their way to progress.

"Headed by the editor of *Lěnsky Listy*, Eliska Krásnohorská, the poetess—the Bohemian Mrs. Browning—the society, composed of the best women and men of Prague, entered quietly upon its great and noble mission, and in about two months enough money was secured to turn a private house into a woman's gymnasium with 53 earnest young women as students, a fine faculty, a library, and a laboratory. This took Prague by surprise. Even the most sarcastic foes stopped talking about the 'long hair and short brains of women,' and their unfitness for any serious work. Such was the beginning. With persevering effort the society gained friends and donations. The girls worked, as the first students of Vassar had to work, and at the close of the year they convinced the last doubter, by their high standing in physics and mathematics and by their brilliant recitals in Latin and Greek. That this first year had not exhausted all the brave and knowledge-loving Bohemian girls, is proved by the fact that this year, the second year of the school, 30 new students applied for admission. Seven of the first-year students wish to enter the medical profession, and the Minerva again sent a request to the minister of education, asking that the students be permitted to enter the practice of pharmacy, and follow in the footsteps of their honored countrywoman, Dr. Anna Bayer!—the first woman in Europe to be appointed by the Austrian Government as state physician to Bosnia.

"During all these efforts, the students of the University of Prague showed earnest sympathy with the movement, generously offering encouragement to their sisters. After this successful opening to the women of Bohemia, the women of Vienna, Hungary, and other countries in central Europe began to write to Prague for information and advice, thus learning from the so often overlooked and ignored Bohemian how to prepare the way to the well-guarded road of learning for the women of Austria and Germany."

To this statement it may be added that a gymnasium, or college preparatory school, was opened in Prague in 1890. Its pupils have a similar course to that of the gymnasia for boys; the aim is to train for medical and academic departments of universities. A rigorous standard of scholarship is required, and so far the work is fully up to the standard. The first graduating class received its diplomas in 1894. It is also stated that the German University of Prague has granted women the privilege of attending the lectures as "*ausserordentliche Zuhörer*," but this does not give them any academic status.

<sup>1</sup> Also called Dr. Bayerova, see p. 956.

In Hungary the ministry has issued a decree providing for the admission of properly qualified women to the universities of Budapest and Klausenburg. The same decree authorizes the training of women for "the professions of teachers in female secondary schools, as druggists and as physicians for women and children."

#### SWITZERLAND.

As indications of the educational opportunities offered to the Swiss women, we quote the numbers of pupils and teachers reported under the Swiss school system, in the Report of the Commissioner of Education for 1891-92. In the elementary schools in 1891 there were 232,978 girl pupils; in the advanced elementary, 12,191 girls; in the continuation schools, 3,283 girls; in normal schools, 708 women; in the universities, 226 women students. The number of women teachers was 3,108 in the lowest grade, 192 in advanced elementary work, 70 in normal-school work. Noted by cantons, the per cent of women teachers was: Glarus, 0; Basel Land, 0.8; Appenzell i. R., 1; Thurgau, 2.7; St. Gall, 3.4; Solothurn, 4.5; Zurich and Schaffhausen, each, 8.4; Graubünden, 12.2; Aargau, 13.5; Lucerne, 13.8; Baselstadt, 28.6; Appenzell i. R., 29.2; Vaud, 37.6; Berne, 38.6; Freiburg, 39.7; Wallis, 45.4; Zug, 49.2; Uri, 50; Schwytz, 55; Geneva, 56.3; Tessin, 59.5; Neuenburg, 65.3; Nidwalden, 72.2; Obwalden, 73.7. Average in 1881 was 30.2, which was increased in 1891 to 33.3 per cent, although women teachers are no longer employed in the cantons of Appenzell i. R. and Schaffhausen.

The universities have been opened to women for the last twenty years. Zurich, Geneva, Berne, Neuchâtel, and lastly Basel, have one by one decided to give women the desired privileges. In 1894 the University of Geneva had 186 women in its courses, from Russia, Poland, France, Holland, America, Servia, and Armenia. Basel at first refused to admit women, but has now yielded to pressure, and allows women to matriculate regularly, but only as a matter of experiment. It is stipulated that, if the experiment does not work well, the university will again be closed to that sex.

According to statements made by Miss Marie Goegg (in the Woman Question in Europe, by Theo. Stanton) a petition was sent in October, 1872, to the "council of Geneva, asking that women be admitted to the University of Geneva on the same footing as men. \* \* \* The following table gives the number of female students who have pursued their studies at the Geneva University:

| Year.   | Sciences. | Medicine. | Letters. | Total. |
|---------|-----------|-----------|----------|--------|
| 1876-77 | 1         | -----     | -----    | 1      |
| 1877-78 | -----     | 4         | -----    | 4      |
| 1878-79 | 3         | 2         | -----    | 5      |
| 1879-80 | 5         | 4         | -----    | 9      |
| 1880-81 | 6         | 7         | -----    | 13     |
| 1881-82 | 8         | 6         | -----    | 14     |
| 1882-83 | 12        | 8         | 1        | 21     |

"This table shows that the number of students is steadily increasing.<sup>1</sup> The list, of female graduates up to December 31, 1882, gives 9 bachelors of science, physical and natural, and 1 doctor of medicine. In Germanic Switzerland, at Zurich, for example, the number of female students is much larger than in the universities of Romanic Switzerland, and they are for the most part Russians. The admission of women to the University of Neuchâtel dates from 1878, but few have profited by the concession. Fifteen ladies, nonmatriculates, have listened to a course of lectures on general history and the history of modern literature, and 1 female student has

<sup>1</sup> But still more interesting is the fact that, with one single exception, all of the female students have pursued scientific or medical studies rather than those of a literary nature.

matriculated, but up to the present time (May, 1883) no degree has been conferred on a woman."

It is generally conceded that the greater proportion of women who have studied at Swiss universities are Russians, hence an account of the experience of these ladies in their efforts to obtain the highest grade education, denied them in their own land, will be of interest. We quote from *Russian Women in Swiss Universities*,<sup>1</sup> by Louise Nydegger, who says:

"While Germany is still obstinately refusing women admission to her colleges, the Swiss universities have for a number of years received them on the same terms as men, and conferred upon them the same degrees. In the university laws and regulations there is no distinction made between male and female students. Both sexes assume the same obligations and receive the same rights on matriculating. Nearly two years ago this equality was extended a step further, when a woman was received as privat-docent in the faculty of law at the University of Zurich, which, in Europe, is a very remarkable position for a woman. The question of granting such a right to women was vigorously debated, not only by the faculties of two universities, but in the Federal Council of the Swiss Republic, until Dr. Emilie Kempin was finally received, on her application, into the body of university instructors. In March, 1892, she opened her course of lectures with a large attendance. \* \* \* It is a strange fact that even in Switzerland, where the same educational advantages are extended to both sexes, higher education for women, parallel with that for men, is not viewed at all favorably. If a young girl is to continue her education beyond what she gets at the secondary school, which she leaves at the age of 15 or 16, she is sent to some female institute. There she gets courses supposed to be especially adapted to the feminine mind and needs, consisting chiefly of modern languages, literature, history, and music, and there generally her education terminates. Indeed, public opinion is so strong that there are very few Swiss women as regular students in the universities. Perhaps the same men who sit in the Federal Council and help to keep the universities open to women would discourage, if not decidedly oppose, their daughters or sisters entering. Still, there are every year a fair number of women students matriculated in the three principal universities of Switzerland, at Berne, Zurich, and Geneva. Women of other countries come a long distance to avail themselves of the opportunities which Swiss women neglect at their own doors. In Berne there are at present two or three women from the interior of Siberia, who were six weeks in traveling from their homes. Among those from a great distance, there is one from Australia, one from Madagascar, and one from a colony of southern Africa. The total number of students in Berne has been something over 600 in the last few years, and about 80 of these are women. In Geneva there is very nearly the same proportion. The majority of these women are from various provinces of Russia and most of them are Israelites. \* \* \* There a few Bulgarian, German, and English women. Those of other nationalities are so rare that they scarcely count. \* \* \* Russian women have gone the furthest in emancipation, have acquired the most brilliant reputation in matters of intellect, and are most daring in enterprise, as compared with those of other nations. American women may have accomplished more, but they do not labor under the same difficulties as the Russians. \* \* \* As the Russians are by far the most numerous among the women students, women's standings and doings are measured according to them. But perhaps no class of beings has been more misrepresented than Russian women students; first, by the enemies of women's higher education; secondly, by those who do not understand their foreign ways and character and who judge them by their own limited standard. Both parties have united in overlooking their merits and in exaggerating their faults, or even in attributing to them such as they never had. They succeeded in so misrepresenting the character and conduct of the Russian women as students that they created a strong prejudice against them, which harmed

<sup>1</sup> In the *Woman's Journal* of November, 1893.

the cause of women's higher education more than any sound argument that could be advanced. Indeed, in order to understand these students, it is not enough to stand by and watch them, for it is true that they often may give cause for misapprehension. One has to be in the midst of them and live with them in order to know them.

"To one who does not regard them from the outset with a shallow prejudice above which he can not rise, they are interesting enough, as he observes them on the streets or in the university rooms and halls, conversing and gesticulating in their animated way. One not understanding their language might often think them quarreling when they are merely expressing their opinions on entirely impersonal questions. Most of them wear their hair short, and are quite indifferent in matters of dress. This has been made a severe reproach against them by those who devote more time and attention to their persons and less to their minds. But a still greater accusation made against them is their freedom in mingling with men. In Switzerland, the sexes have very few common interests, and few opportunities are granted them for associating before marriage. They live so much apart that as a rule they are embarrassed and awkward in each other's presence, and one almost wonders how they get to know each other before they are married, or at least engaged.

"But the Russians are raised differently, there being among them much more fellowship between men and women. Accustomed to regard each other as comrades and coworkers, they treat each other accordingly, in relations where there is no love concerned beyond the love every human being owes to his neighbor. Intellectual pursuits, especially, can create between men and women relations into which love does not necessarily enter. As there are also a number of Russian male students at the university, the two sexes naturally preserve the same bearing toward each other. Thus, while two young Swiss of opposite sexes can scarcely take a walk or attend an entertainment together unless they are engaged, the Russians think nothing of going to each other's rooms for study, of walking together at any time of the day or evening, even until late, or of assisting each other in various ways. This freedom, so natural and hence so allowable, has given rise to the gravest misinterpretations on the part of those who are accustomed to an artificial system of intercourse, and who have deeply rooted in them its notions of decorum. On this account, it has even been seriously argued that the mixed attendance of men and women at the universities leads to immorality. To make appearances worse, most of the women study medicine, and are with the men not only in the lecture rooms, but in the anatomy classes, in the hospitals—in fact, everywhere. It may be true that many things come up which are painful for a young woman when she has to face them in the presence of men; but science calls for the greatest objectivity, and a woman who is earnestly devoted to her work will soon acquire it. Does it lower a woman's dignity if, for the purpose of some day relieving pain, she rises above the idea of sex and remains calm in situations where otherwise she would be overwhelmed with shame? She is no more unwomanly for doing this than a man is unmanly under the same circumstances.

"The Russian women are animated and excitable in temperament. Each of the three university cities named above has quarters where a large number of the Russians live near each other. Generally they rent rooms and prepare breakfast and supper themselves on an alcohol lamp, taking their dinners at some boarding place. They communicate little with those outside of their own nationality. This is due not so much to exclusiveness as to lack of opportunity for contact with others, and, to some extent, to the language. It is not hard to make their acquaintance if any one seeks it, for they are cordially sociable and very hospitable. A cup of tea, which they prepare deliciously with the addition of a slice of lemon or some other fruit, is offered you at any time of the day when you may enter their room, and you are soon set at ease by their frank way of treating you.

"Of those that come to the universities of Berne and Zurich, almost all have at least a theoretical knowledge of German when they arrive, so that they can very

nearly understand the lectures, though they may not yet be able to speak well. Often they understand, read and write the language much better than they can speak it, for want of practice, because they always converse in Russian among themselves and have little opportunity for conversation in another language. Some can speak fluently when they arrive, having studied German from childhood. It is the same with the French in Geneva, only a larger number know this language at the outset, it being more popular in Russia than German.

"Of course, the difficulties of university study in a foreign country are much increased for those who come with little or no knowledge of the language, but there are a few such. However, the Russians have great facility in learning languages, and are very good at conversation. Even before they have quite mastered a language they can express their thoughts remarkably well, aptly steering around the terms with which they are not yet familiar. To this ability to express themselves is added that other, so essential to good conversation, that of calling forth the thoughts of others. They talk with a certain animation and candor that makes them very genial. There is scarcely a subject of general interest that one can not discuss with them, but they are interested especially in the social questions of the day. It is natural that their attention should be turned to such questions, considering the social conflicts and wrongs which agitate their own country and from which so many suffer. Bellamy's *Looking Backward*, for instance, is a book that was eagerly read by them at one time.

"It is remarkable, too, how much they have read, even before coming to the university. The Russian girl of the better classes grows up doing scarcely anything about the house, for servants are very cheap and plentiful in Russia, and manual labor is despised. Thus she has the whole day to herself, and the intelligent spend it in reading and study. Even part of the night is spent in this manner, they are such insatiable readers. From a very early age they read enormously and indiscriminately, science, history, novels, poetry—everything which falls into their hands. \* \* \*

"The ideal of the intellectual young girl is to go to a foreign university, where she can study in a freer atmosphere and have more advantages. To this may be added a desire to see the world, to enjoy life, and to be perfectly independent. She has visions of happiness and activity to be found far away, which sometimes end in disappointment, for even there other difficulties come up which do not enter into her dreams. Often she has to struggle long and hard with parents and relatives before they grant her wish, because, being less enthusiastic, they take more account of the danger and responsibility of such a step. \* \* \* But she is determined in her purpose, and at last she gains the victory. Often she leaves home before the age of 20; but, as a result of her eager and varied reading, her mind has matured early. At that age there is scarcely anything of note which she has not read. Besides Russian literature, she has read the chief works of the principal foreign languages, either in the original or in translations. She has a good memory for what pleases her. Some can recite long passages, not only of such writers as Lermontoff, who is a favorite among Russian youth, but also of Shakespeare, Schiller, Goethe, and others. Even long after having read anything they can give a clear outline of it, which shows that they read with understanding as well as with rapidity. Marvels of intelligence and precocity are not infrequent among them.

"In Berne there is a young woman from Odessa in the law school, the only female law student there until last term. She left home very young. As she had musical gifts, she was sent to a conservatory in Vienna. She stayed there nearly a year, but music alone did not satisfy her, and she begged her parents to let her go to the university. She entered the school of medicine in Berne, and after a year's study found again that it was not what she wanted. She then changed to the law school, in which—the studies being congenial to her—she persevered. Last year she won a prize in competition with her fellow-students by a dissertation on a given subject; and this was awarded her for real merit, not through gallantry. Gallantry is not

carried so far in Europe when woman competes with man. In the discussions of the class room she is also remarkable for her quickness and ability. As one of the other students said, 'She speaks long before we are ready to say anything.' Some time next winter she will take her examinations for the doctor's degree; and she was only 22 last month. In addition, she plays well on the piano, and has much knowledge outside her special line of study. She is a vivacious little thing, very nervous, with delicate, intellectual features. When she becomes animated and absorbed in discussion, destruction to everything she takes in her hand just then.

"About two years ago another young woman passed a brilliant examination for the degree of M. D. at the age of 22; and at the Swiss universities the study of medicine requires at least five years' study, besides a good preparation before beginning.

"Many of the Russian students come to the university with slender means. The last few years especially have been hard for them, for the ruble, whose nominal value is 4 francs, was actually not worth more than 2.30 to 2.60 francs in foreign countries. But a characteristic trait of the Russian students is their generosity and helpfulness toward each other. There is among them a treasury to which those who have abundance contribute for their less fortunate compatriots. Then, during each semester, there are 'evenings' given, the profits of which are also used to aid poor students. These 'evenings' are held in the hall of some hotel or restaurant, and tickets of admission are sold. There are no waiters; the students prepare and serve the refreshments themselves. Tea is the principal beverage, and the famous 'samovars' stand on sidetables. \* \* \*

"As the attendance on these occasions consists of students and their friends, the 'evening' becomes a gathering for social enjoyment. They are delightful diversions from the work of the semester, and everyone seems to be gay and happy. To increase both amusement and profit, there is a table with trifles for which lottery tickets are sold. There are tables with fruits and candies and all sorts of sweet things to tempt buyers. When the attendance is thought to be nearly complete, the talk and laughter is hushed for a while and everybody's attention is turned to the stage. A little drama, recitations, or tableaux are given. Later, dancing is begun and occupies the rest of the evening. According to traditional notions of womanliness, the women medical students are now 'womanly,' for they have laid aside dissecting knives and text-books, and enjoy themselves in the ballroom just like society women. \* \* \*

"The more bold and active among them take a keen interest in the workingmen's movements of the city in which they study, attending their meetings and entertainments. There is often a close sympathy between the Russian students and the working classes. \* \* \*

"Another organization among the Russian students of both sexes is that connected with a library and reading room which they support by monthly contributions. When quarrels arise they even have a sort of tribunal to settle matters. Sometimes a punishment is inflicted, i. e., that thereafter none of the students shall speak to the culprit. Thus, outside the university they lead a life of their own, apart from the rest of the students.

"It is touching to see how some of them endure privations for the love of study, or for the sake of living with more freedom in a foreign country, or for both reasons combined. Such students live in a small, simple room, preparing their own meals on an alcohol lamp, and of course their food is very plain, consisting of little but porridges, bread, and tea. But, even under such circumstances, they do not forget to be hospitable, and would share the last morsel with any fellow-creature whom they considered as a guest. Indeed, they often are each other's guests, and the idea of wealth or poverty does not seem to enter into their relations. In the same way, they are free about lending and borrowing money, which they usually receive in

monthly sums. Those who have money give as long as they have any, and when it is gone they borrow in their turn until they are again supplied.

"The study of medicine is a long and hard study, and those Russian women who pursue it, even under difficulties, have little assurance that it will ever gain them a living. For this reason it seems strange at first that the majority devote themselves to it, while only a few follow other courses, such as natural science or literature. But medicine affords them more chances of activity than studies in another direction, even though women are not allowed to practice it in Russia. They practice in a sort of underhand way, as assistants to some masculine relative or friend who is a doctor. But they have no right to give prescriptions, and, of course, more or less danger is always connected with work of this kind. Some go to Bulgaria, Servia, or Roumania, where the law allows women to practice; and a few settle in Switzerland. But in this latter country it is hard for them to acquire a practice unless they have influential connections among the professors; first, because there are plenty of good native doctors, and secondly, because the prejudice against feminine doctors is still strong.

"Others go to America, allured by glowing reports of woman's position there, of unbounded freedom and lucrative work. The destiny of these differs widely. Some may be fortunate in the New World, while of others rumors have floated back to their friends in the Old World that in spite of university diplomas and doctors' degrees, they were obliged to work in factories. The latter is quite probable; for, coming here without friends or protection, strangers to the country and its ways, they fail to obtain the position for which they are qualified, and at last are forced to resort to manual labor. Perhaps Americans do not extend to them the sympathy which they merit, receiving them coldly and even with distrust as foreigners.

"A good many, especially of the wealthier class, study simply for the love of study, without expecting to apply their knowledge. They study medicine because it is the most positive science there is at present, and seems best adapted to their bent of mind. However, that does not hinder them from acquiring much knowledge in other directions. It is even remarkable how they adhere to the study of medicine, in spite of other qualifications more promising. In Geneva there is a young woman from Odessa, now studying medicine for the third year, who has a voice of rare beauty, and who is very graceful and prepossessing. She has often been urged, by persons highly capable of judging in such matters, to cultivate her rare gift, as it would be a sure way to fame and fortune. But no prospect, however flattering, can induce her to abandon the study of medicine, which she pursues with the intention of some day devoting herself to philanthropic work. Of course she does not entirely neglect her voice, and sometimes contributes to the entertainment on those 'evenings' mentioned before, or sings at smaller gatherings of her friends.

"As a rule, the Russian student has a great capacity for work. When preparing for an important examination, for instance, she stays shut up in her room, lounging half dressed upon a sofa and studying for days together. Her friends, knowing how she is occupied, visit her but little, unless to study with her. This she can keep up week after week for a long time. But, ordinarily, they believe in having enjoyment, too, in their college life, and they have many gay times, visiting each other, entertaining company in their rooms and drinking tea together, or frequenting the theater. Sociability is highly developed in them. As they are usually lovers of nature, and the university cities of Switzerland have such beautiful surroundings, long walks and rambles are another source of pleasure and recreation. But those who come to the university simply for the sake of leading a freer life and having more enjoyment than they could at home, and who do not work seriously, are rare, though occasionally such can be found.

"Often they study after they are married, and sometimes husband and wife are both in the university. Among the married women, two must be mentioned, although they are not students themselves, for the sake of the support which they have been to their student husbands.

"Recently a gentleman passed his examination for the M. D. degree at the University of Berne who had been an exile in Siberia for several years. When sentenced he was engaged, and his betrothed followed him voluntarily into exile, where she was married and faithfully shared his hardships. When he was free again they went to Berne, where he entered the university. Their means being insufficient, the wife returned to Russia as a governess. A few months before his examinations she came back to Berne to help him in another way. While he stayed at home all day studying and reviewing, his wife got their notebooks from other students and copied the lectures which he was missing, besides copying the thesis which he had to write for his degree.

"The wife of the second gentleman has two small children, and can not go away to work, but nevertheless she largely supports the family while her husband studies. From 20 to 30 Russian students get their dinners from her everyday, and she does all the work alone—even sews and mends for some of them, besides having the care of the two children. There are few comforts in her home, it being in a somber garret story, yet she is not one of those women who are always complaining of being tired and worn out. She is always bright and cheerful, though often she does look worn.

"Pessimistic tendencies are common among the Russian students, and this seems inevitable in their conditions. \* \* \* The more intelligent anyone is the more acutely he suffers in such a life, especially when he feels the impossibility of doing anything to change it. With an active mind and an intense desire for knowledge, the intellectual Russian girl has a constant longing, which impels her to go to a foreign university in the hope of satisfying it there. She spends years of study abroad, enjoying the free atmosphere of the Swiss Republic as well as its natural beauties, and moving in a circle of congenial compatriots. Still there is in her, like an under current to a gayer temperament, a strain of melancholy which sometimes gains the upper hand. When her university career is over, the chances of a congenial activity to follow it are few. In Russia she is limited to the domestic sphere. \* \* \* To remain for the rest of her life in a foreign country would be hard, too, in many respects, even aside from the fact that it often means separation from her parents. Thus, the longing with which many come is still unappeased, or even more intense, when they leave the university with a degree, unless it be terminated in happy married life." \* \* \*

#### GREECE.

"Since 1890 the university at Athens has been opened to women; until that date women who desired a higher education were obliged to go to the universities of Europe, because they could not obtain this higher instruction in Greece."

This statement would seem to imply that the women of Greece had not previously received a high degree of education, and in a measure this is true; but, dating no farther back than 1836, it is stated that an educational society was formed with the object of educating the women of Greece. Through the efforts of this society, and "with the generous help of M. Apostolos Arsakes, an Epirote Greek, the Arsakeion<sup>1</sup> was built. It has now 1,500 pupils and a capital of 1,300,000 drachmas (\$250,000), and has yearly subventions from the Government and local governments. The pupils, many of whom become schoolmistresses, are supposed to spend six years in it after having spent three in elementary schools. There is an infant school under the same management. There is a similar school for girls at Kerkyra, founded in 1868, with over 200 pupils, as well as at Eleusis, Gaurion, Kotachovon, and Menidi. The society has in its service altogether 40 professors and 59 schoolmistresses. From 1836 to 1890, 43,963 pupils have passed through these schools, of whom 2,500

<sup>1</sup> See Greece under King George, by R. A. H. Bickford-Smith, M. A. (student of the British School at Athens), London, 1893.

have become teachers. The number of pupils of the Arsakeion has been in different years as follows:

| Year.     | Pupils. | Year.     | Pupils. |
|-----------|---------|-----------|---------|
| 1836..... | 150     | 1876..... | 1,432   |
| 1846..... | 224     | 1886..... | 1,471   |
| 1856..... | 650     | 1890..... | 1,500   |
| 1866..... | 595     |           |         |

Total expenditure, 8,944,295 drachmas (\$1,727,048).

" \* \* \* The amount of money spent on the Kerkyra school has been 1,108,379 drachmas (\$213,957), which is included in the above total. Its total pupils number 4,618. Over 3,000 girls have passed through the other four schools, which have been founded nearly thirty years. Two hundred and fifty of the poorer girls receive this higher education without payment. The expenditure on the six schools in 1889 was 227,041 drachmas (\$63,119). There are a good many private schools for girls in Athens. The result of all this effort is that Greek women get a very fair education, and can get a very good one. The girls, however, do not make anything like the use of the schools that the boys do, chiefly through parental dislike to trust them out of sight, a prejudice which is not yet entirely unreasonable, though it is no doubt a legacy from Turkish times. This is gradually being overcome, and then no doubt the girls will be allowed to take advantage, to the full, of the ample opportunities offered to them."

In elementary schools in 1889 there were 18,886 girls pursuing the course of study (boys 78,815).

Another writer<sup>1</sup> gives an interesting description of the Arsakeion, and of the *Ouvroir des Femmes Pauvres* (half factory, half school). We quote:

"There are two fine institutions which do much to further the interests of women in the famous Grecian capital. It is so natural to associate Athens with a past glory, and therefore with retrogression, that it is a surprise to meet with modern institutions of such excellence as the Arsakeion and the *Ouvroir des Femmes Pauvres*. The former is an unusual and most successful combination of a boarding school, private day school, and high school on an extraordinarily large scale; for the scholars, all told, number nearly seventeen hundred. The needs of so vast an undertaking are amply filled by the spacious building which was founded by a generous Greek in 1836, and has since been largely supported by donations, the boarders paying but 100 and the day scholars 35 francs a month. An air of neatness and order pervades the whole structure, which is of stone, with bare, austere walls. In that part of the building frequented by the day scholars, and which is at the same time the home of a large number of girls, is a pretty chapel, a good library, a room full of scientific instruments, another where courses in dressmaking take place, and a wing which answers the purpose of a school for music, both vocal and instrumental. Drawing and painting are poorly taught, no freehand work being required. Although the curriculum includes the study of the French language, all the lectures and lessons on the sciences, history, and literature are given in the soft and melodious Greek, to which it is a pleasure to listen, even without understanding what is said.

"The scholars, who belong exclusively to the middle class, are orderly and attentive pupils, but unprepossessing in appearance. There are few bright and fewer pretty faces to be seen; the almost entire absence of blondes is most striking, and the cast of features is decidedly Jewish in character. The unhealthy, sallow complexions are no doubt in part due to the fact that the windows in all the class rooms

<sup>1</sup> Helen Elise Villard in the *Woman's Journal* of November 24, 1894.

are kept hermetically sealed. In the dormitories, however, which accommodate from 15 to 30 girls, the windows are left open all day. These lofty rooms are even barer than hospital wards, for there is not so much as a chair to be seen.

"A short distance from the great Acropolis, and almost opposite the mighty pillars of the Jupiter Temple, stands a modest-looking building, which gives employment to and thereby saves from want 400 women and girls. The *Ouvroir des Femmes Pauvres*—half factory, half school as well—has existed for twenty years. It was first organized and has since been managed and directed wholly by women. It is a charity only, inasmuch as it furnishes so many poor and ignorant women with the means of learning how to gain a livelihood, and the opportunity of doing so as soon as this has become possible; for the various useful and ornamental things manufactured in the building find a large sale.

"The visitor is first ushered into the sales and exhibition department, which is very like those of the American Women's exchanges, and presided over by ladies who are indefatigable in showing the different articles and explaining how they are made. There are rugs and carpets indestructible, but hideous; characteristic many-colored Greek table covers; pretty silk goods, both plain and fancy; silk and cotton crepes; muslins, with silk stripes; soft scarfs of exquisite shades; gauzy handkerchiefs, with borders equally delicate in color, and with 'Athens' embroidered in Greek letters in the corner; embroideries of all kinds, and a very large display of most beautiful underwear. These daintily stitched and embroidered garments, with their pretty ribbons and laces, have a truly Parisian air and are much in demand for trousseaux.

"The other rooms on the ground floor are given up to the manufacture of materials, which are spun and woven with incredible rapidity and skill by young and old. Hand and treadle machines are used throughout, except in the room where bright silks for the fabrics are spooled by machinery. On the upper floor, more goods are manufactured; but the chief industry is the cutting and making of underwear.

"Small children are taught how to hem and tuck in one room, older little ones embroider the initials on the handkerchiefs, while the girls who have become skilled workwomen make whole garments under the supervision of one or two teachers and matrons. Then there are rooms where the carpets and table covers are made, 12-year old girls and old women working side by side, as in the other manufacturing departments. The countenances of all the workers verify the assertion of the principals that they are not only industrious, but thoroughly good women and girls. However busily at work, they always find time to greet the stranger with a friendly smile or nod; and although they are all of the lower class, the girls are brighter looking and more comely than the pupils of the *Arsakeion*. Indeed, there are some strikingly beautiful faces with classic features, and coloring as dark and rich as that of the Italian maidens. There are one or two little boys among the workers, who exhibit their handiwork with much pride. Work begins at 8 and continues until noon, when a simple but hearty dinner of soup, meat, and vegetables is to be had for the trifling sum of 15 centimes, after which work goes on again till 5. The wages vary according to the amount and quality of the labor, but the highest do not exceed 5 drachmas, which is less than half a dollar, owing to the depreciation of paper money. Fortunately, the cost of living in Greece is correspondingly low."

Mme. Callirrhoe Paren, editor of the *Ephemeris ton Kyrion*, of Athens, reviews the situation in Greece by stating that—

"The admission of woman to the university and to the Polytechnic, the extension in wider circles of her industrial activity, her eligibility to membership in the examining committees of the public schools and in the examination of teachers for diplomas, the preparation already made by a progressive government for her technical and special education, the diffusion of her philanthropic activity gradually through the country, the establishment of schools on Sunday for the secular education of girls and women who are employed during the week, are victories for which we

may raise trophies upon the thorny road we have traveled, so that we may go forward with courage in the companionship of all those truly desiring and laboring for domestic and social prosperity."<sup>1</sup>

## ITALY.

No law of the Kingdom forbids women entering the universities and taking degrees, and within a few years several women have reached the doctorate in medicine and literature. Viewed from the historical standpoint, Italian women distinguished themselves in poetry and prose even prior to the Renaissance, and during that period they held positions as professors in the universities of Italy.

In the fourteenth century La Donna Abella, a woman physician, had quite an honored reputation, and in later centuries there were women professors of sciences and the classics; among them Bettina Gazzadini, a most distinguished savant; Laura Bassi Veratti, lecturer in philosophy at Bologna; Gaetana Agnesi, Clotilde Tambroni, celebrated for Greek improvisation; the beautiful Novella d'Andrea, and Laura Cereta-Lerina, who was professor of metaphysics and mathematics in Brescia; Elena Lucrezia Cornaro Piscopia, of Venice (1646-1684), who became doctor in philosophy in 1678.<sup>2</sup> These and many other learned women are grouped together in the annals of the Italy of past centuries.

In the sixteenth century, "so rich in illustrious women,"<sup>3</sup> there was scarcely an important city without its poetess; the intellectual women disappeared with the fall of the Italian republics, but from that epoch "dates the creating of various religious orders for the education of girls."<sup>4</sup> As early as 1779 an institution for girls (*Educatore femminile* Maria-Delaide) was founded in Palermo. The professional instruction of women was first advocated by Laura Mantegazza, who founded the earliest professional school in Milan, with the object of giving girls such instruction in industries as would lead to independence if united to higher moral and intellectual education. When Napoleon I was in control in northern Italy a girls' college (*Collegio reale di fanciulle*) was established in Milan. From 1822 to 1830 the Austrian Government, then dominating, organized 14 intermediate and 1,044 elementary schools for girls. The Casati law of 1859 placed elementary schools for girls in charge of women teachers, and decreed the establishment of normal schools to prepare for such work. In 1861 a girls' college of high grade was established in Milan and one in Turin in 1866. A higher normal school for women in Florence dates from 1882.<sup>5</sup> At a later date it is stated that the higher educational institutions for girls and the "magisteria," or special normal schools, "answer the purpose of general culture for women rather than that of normal training, for which they were created."<sup>6</sup> The same writer states that "the culture of Italian women, as noted in the attendance at the normal schools, has progressed everywhere. The pedagogic direction of the kindergarten, of the Sunday schools, as well as of the inferior classes of the elementary schools, is now intrusted to female teachers. A group of distinguished and well-educated women, known in literature, have undertaken, by means of lectures and the press, to secure such a law as will afford women the same treatment as is accorded to male pupils."

Signor Bodio, director of the Royal Statistical Bureau in Rome, says: "Women are admitted to both classical and technical schools; in 1891 there were 1,498 women in attendance. There are also technical schools for women exclusively. Women are admitted to university privileges, and are most frequently to be found in attendance upon the faculties of natural sciences and of medicine and surgery. Among the women who frequent the institutes of a higher grade than secondary schools the

majority attend special courses of study, but do not endeavor to obtain academic degrees."<sup>1</sup>

While the number of women students in all grades of schools, especially those of the highest grade, can not be definitely stated, it is of interest to know that there were 15,894 women studying in normal schools in 1891-92; in evening and holiday schools, 64,379; in private schools, 124,733; in the public elementary schools, 1,033,547; while the rudiments of instruction were given in the same year to 142,928 girls in kindergarten and infant schools. Connected with the convitti, or boarding departments of schools, were 49,726 women, of whom 3,539 were engaged in special studies.<sup>2</sup>

In the 5 institutes for instruction in music which receive Government subsidies there were 305 women students out of a grand total of 870. In some of the normal schools the elements of agricultural science are taught, and in 1890-91 there were women under instruction in 11 normal schools. Studying for the position of instructress in normal schools, or in schools above the elementary grades, were 181 women in 1890-91. The course of study covered Italian language and literature, French, German, and English languages, history, geography, mathematics, physics and chemistry, logic, psychology, hygiene, and drawing.<sup>3</sup>

In contradistinction to the statements herewith presented, an interesting article on the education of Italian girls is cited in part. It is from the Signora Zampini-Salazar, who was one of the Italian ladies at the Woman's congress in Chicago in 1893:

"As regards a desire for knowledge among Italian women, it is reduced to the smallest proportions. Those in the lowest station of life have become the only class who study at all, and these mostly obtain positions as teachers. Of all classes probably the country girls make the best wives and mothers, and become devoted to their families when not led away by an imprudent ambition to seek their fortunes, and too often to find their loss, in the great centers of industry. Few efforts are made to establish local schools of technical instruction in these villages and rural communities. Prof. Ruggero Bonghi has lately succeeded in establishing a first-class girls' college at Anagni, near Rome, for the daughters of teachers. The new institution, patronized by Queen Margherita, and bearing her name, promises to become one of the most practically organized in Italy. The education given there is adapted to the needs of the social class to which the girls belong. One of the most recent innovations is a special section of instruction in practical agriculture and dairy work.

"A distinguished Italian lady, Signora Aurelia Cimmino Folliero de Luna, has also had notable success in establishing a rural school for girls in northern Italy.

"The new minister of public instruction, Senator Pasquale Villari, understands the need of reforming female education. His predecessor had already shown that his interest in it lay not by words only, but by deeds. He lately ordered all the institutes of fine arts in Italy to be opened to women, so as to encourage them in art culture. Having heard how deficient was female education in convents and national colleges, he charged Commendatore Gioda, who was at the head of ordinary and popular instruction, to inspect girls' colleges throughout Italy and report officially on their state. His report is most valuable to anyone interested in Italian girls education, for it gives a very clear idea of its present state. We have now in Italy, throughout the various provinces, 1,584 female colleges, thus divided:

|  |       |
|--|-------|
| Entirely supported by the Government .....   | 5     |
| Established by the Government and variously self-supporting .....                              | 42    |
| Established by the provinces or cities .....   | 73    |
| Established by private associations, and having the character of charitable institutions ..... | 804   |
| Private boarding schools .....   | 660   |
| Total .....  | 1,584 |

<sup>1</sup> Signor Commendatore Luigi Bodio; vide Report of the Commissioner of Education for 1890-91.

<sup>2</sup> See *Statistica dell' Istruzione Secondaria e Superiore*, anno 1891-92.

<sup>3</sup> Vide article by Signor Commendatore Bodio, director of Royal Statistical Bureau, Rome, Italy.

<sup>4</sup> Signor Baccelli now fills that position.

"In these colleges, many of which are convents, 47,358 girls are boarders, while 29,294 daily pupils attend the schools and receive their education there. So Italy has at present 76,652 young girls being trained to be sensible women, the mothers of the future Italian generation.

"The three royal female colleges in Naples, entirely self-supporting, deserve special notice. One of these three Neapolitan colleges is especially meant for girls of the middle class. \* \* \* Professional schools have met with comparative success for girls of inferior social condition, and in some of these instruction in culinary mysteries has been given.

"Queen Margherita is greatly interested in girls' culture in Italy. If she could exercise more influence, her mind would be inclined to view woman's progress favorably. As a constitutional sovereign, with a desire not to exceed the authority given her, she abstains from indulging her liberal views. Highly cultivated herself, she can fully appreciate the divine enjoyment of a refined mind, and her personal encouragement to anyone willing to contribute to female progress in Italy is most generous. She receives with the greatest interest ladies actively engaged in any intellectual pursuit, whether it be art, which she loves and feels deeply, or philanthropy, which she practices largely, or teaching, or reforms in education.

"Last May, in Florence, to celebrate the sixth centenary of Dante's Beatrice, Count Angelo de Gubernatis, the distinguished Italian writer, conceived the brilliant idea of seizing the occasion to honor Italian women by the first exhibition of intellectual or manual work done by them during the thirty years since Italy was united. This exhibition proved a revelation of the capability of Italian women. Besides their work—manual, literary, and artistic—many of them have shown talent by musical entertainments, recitations, dramatic performances, tableaux vivants, and choruses. Several among the best Italian female writers have given public lectures on woman's position in Italy, both past and present. These lectures have just been published in a large volume edited by Civelli, in Florence, with the characteristic title of *La Donna Italiana descritta da Scrittrici Italiane in una serie di Conferenze tenute all'Esposizione Beatrice in Firenze*. The book proves that the woman question in Italy is advancing and that old prejudices are disappearing. Gold medals have been awarded to several of our cleverest Italian women—for music to Gilda Ruta, the composer, for her lecture on education; to Ida Baccini, the popular writer for children, and to the author of this article, for her literary productions.

"The Countess Irene della Rocco de Castiglione established at Turin an excellent magazine for girls, receiving assistance from some of the best writers of the day. The review has been taken in charge by one of the first publishing firms in Florence.

"The principal reforms needed in our modern educational system is that girls should be trained, not as a separate sex, but as an important part of the great human family. A girl's teachers are too apt to forget that the great object of education is to call forth the noblest faculties of her intelligence and to lead her, as far as possible, toward mental perfection. We can not secure a high tone of national life until it is admitted that girls should be trained rationally. In no country is woman's influence so strong, for, from the cradle to the grave, men are accustomed to be led and swayed by women's influence. Men of the less bigoted type would gladly see the dawn of an era of intelligent education for girls. Even now the Italian Government has given some attention to the matter, and it is proposed to make the royal palace Favorita, near Naples, a first-class college for girls. It would require little more than a rational arrangement of the course of study to make it a complete success.

"All these events show that a serious movement is in progress for the elevation of women in Italy. When this has taken place, Italian girlhood will be the happy vision of a poet. We want not alone the fresh, blooming colors of youth in the appearance of our daughters, not only the pure classical outlines of our Greco-Latin types. We hope to see in their clear, dark eyes the light of a noble soul; on the fair brow we look for the lines of thought, and in the sweet smile for the signs of a

gentle if passionate heart. And when education has done its work, elevating our lovely girls to the perfection they can and ought to attain, Italy will once more be the land of genius, of art, of poetry."

In an address by the Signora Zampini-Salazar before Sorosis, in New York City, in December, 1893, it was stated that the women of northern Italy were more progressive and more cultured than those of the southern provinces.

About women's organizations Signora Salazar gave numerous interesting facts. In Bologna the most active and progressive women were to be found, and they worked with a common aim. They accomplished much by their solidarity. Mazzini's influence was strongly felt there, and the efforts of an Englishwoman who had married his best friend did wonders in organizing and helping the cause of culture and progress. In Milan also the efforts of women of intellectual attainments in behalf of their sisters were earnest, but they lacked the peculiar strength of those of Bologna. There were excellent schools for girls in Milan, but no such strong centralizing influence as in Bologna.

In Turin the intellectual women were, according to Signora Salazar, engaged in trying to organize for the advancement of their sex. In Rome there were two clubs, both intensely conservative, but both enjoying royal patronage. One was a sort of philanthropic organization, which helped working women, established day nurseries for the children of working women, and the like, but did no purely intellectual work. The other was a club for culture, but Signora Salazar regretted to say that the most vital subjects ever introduced were themes from ancient history, and that the general effect was to deaden rather than awaken the intellects of the members. It was well attended, she said, because the Queen attended, but the interest the members seemed to take in one another's little bonnets and pretty toilets was the greatest one manifested.

In the matter of educational advantages for women, Italy was behind the times. There were public schools for elementary culture and normal schools for teachers, but a painful lack of girls' colleges. The opening of universities, lyceums, gymnasiums, and art schools to girls did not serve a very great purpose, as there existed a strong prejudice against coeducation.

In the professions women were handicapped by public opinion and masculine opposition. As doctors of medicine they had most liberty, especially since Queen Margherita had made a woman one of the honorary physicians of the court. But in the legal profession the utmost a woman could hope to attain was the privilege of helping her brother, husband, or father. In music many Italian women did great things, but it required natural genius and the endurance of great hardships. In business women were employed in telegraph and telephone offices. In schools they might be teachers, but not superintendents.

The end toward which she and all other earnest women were working was the recognition of Italian women as individuals and the granting to them the largest possible personal freedom.

That the time would come when all this would be accomplished Signora Salazar did not for a moment doubt. Italy as a nation was young, she said, and one could not expect more progress among its women than had been made. They possessed all the inherent traits of greatness, and only time and the educating influences of time were needed to bring them into the front ranks of women.

#### PORTUGAL.

The general consensus of opinion has been, in the Iberian peninsula, that an elementary education and certain accomplishments were about all that young girls needed to make them acceptable members of society, but now that the Queen of Portugal herself has studied for and taken a doctor's degree, that of M. D., it may be inferred that an impetus has already been given which will lead to the pursuing of higher studies by many of her subjects. In the latter part of 1891 Dona Amelia

Cardia obtained the diploma of doctor of medicine from the Medical College in Lisbon. Her graduation thesis on hysterical fever was applauded by the faculty. Women are admitted to the Royal Conservatory of Music in Lisbon; they learn to speak the languages in the private boarding schools to which most of them gravitate; they also study the elements of mathematics, geography, history, etc., and some of the girls pass creditable examinations for entrance to the lyceums and colleges for boys. If they choose to enter these secondary schools, the law of June 14, 1880, permits them the same privileges as to the male sex. Portugal possesses two normal schools for girls, in Lisbon and Oporto; in 1890 there were 58,045 girls receiving an elementary education, and 3,955 pursuing a higher course in lyceums and colleges.

## SPAIN.

Until a late date there have been no laws admitting women to university privileges in either Portugal or Spain, and yet women were not debarred from such study if they so desired. In Spain, by decree of May, 1892, women are admitted as "hearers," by order of the Queen Regent, in the name of King Alfonso. Should any women desire to matriculate, special arrangements may be made. There were 20 women studying in the universities during the year 1892; the most of them were in the courses in medicine and pharmacy.

In the Pedagogical Congress, held in Madrid in 1892, several noted women of Spain presented papers on the woman question; the trend of their discussion was to indicate the need of training in normal schools for women as one of the first elements of a much needed amelioration of existing conditions. These papers are presented in *La Escuela Moderna*, but there seem to be no immediate results of the discussions beyond the awakening of interest in the need of a higher standard of education for women.

Among those who have greatly aided the women in Spain, either through their own literary attainments or through efforts toward ameliorating existing conditions, are the Señoras Matilda del Real, Concepcion Arenal,<sup>1</sup> and Emilia Pardo Bazan.

The inspectress of municipal schools in Madrid, Doña Matilda del Real, in a paper before the pedagogical conferences held in Madrid in 1893, clearly portrayed the need of first learning to understand the nature of the child—here Froebel methods are cited—before proceeding to educate it. She earnestly advocated such training as would lead the child to look back upon its youth as a happy childhood. Doña Concepcion Arenal, in her writings, depicts the faults of woman's education—"if it can be so called"—in Spain. Oftentimes in the schools for girls the school mistress is unfitted for such employ, and "the major part of the time is employed in manual branches [feminine handiwork, doubtless], and it is an exception if the school mistress knows how to read intelligently, or to write without violating the rules of orthography, and to explain the most elementary parts of arithmetic." In higher grade schools the girls are taught geography, history, French, and music, but the instruction is not thorough. The lady advocated that there be similarity of education for men and women (*Que la educación debe ser la misma para el hombre que para la mujer*),<sup>2</sup> and that they work harmoniously together in educational institutions. Doña Emilia Pardo Bazan, one of the best-known women of letters in Spain, and a novelist whose writings are distinguished by great truth of local coloring, adds greatly to the estimate of woman's higher education in Spain.

The schools founded by the Association for the Education of Women (*Asociacion para la enseñanza de la mujer*), in Madrid, are benefiting hundreds of girls who attend the courses in pedagogies, modern languages, and painting, or who pursue the business course.

<sup>1</sup> Doña Concepcion Arenal, author and littérateur, was born January, 1820; died February, 1893.

<sup>2</sup> *Boletín de la Institucion libre de Enseñanza*, 31 de Octubre de 1892.

In the school of music and declamation, and in that of arts and trades, both in Madrid, many girls have followed the courses. In the former there were 918 in 1880-1881; in the latter, 130 in 1881.<sup>1</sup> Later statistics are not available.

#### RUSSIA.

The history of woman's education in Russia seems to date from the accession to the throne of Catherine the Second, and many educational and charitable institutions were established during her reign, 1762-1796. In 1764 a royal order established an "Educational Home for Girls of Noble Birth," and within a year young girls of the middle classes were admitted to a division of that home. The course of study extended over twelve years, and admission was from the fifth or sixth year. Pupils of noble birth received instruction in the ordinary branches, in the elements of rural economy, in architecture and heraldry, in etiquette, and the observance of the laws of polite society. The girls of the middle classes had their attention turned to household economy, the proper management of a home, knitting, weaving, etc. The Empress Marie Feodorovna (1796-1828), in turn, assumed the immediate direction of this educational home, and gave it an endowment of 1,300,060 rubles (\$510,923). A number of educational and benevolent institutions for girls and women were established during her reign. Among others, the Kharkof Institute, founded in 1817, which authorized the admission of girls of noble birth, of merchants' daughters, of paying and nonpaying pupils. These were the beginnings of the charitable and educational institutions, homes, hospitals, schools for the deaf and dumb, etc., which are grouped and known as the Marie Institutions.<sup>2</sup>

During the reigns of the Emperors Nicholas I and Alexander II (1828-1881) the number of institutions for the education of girls so increased that a "Supreme Council of the Educational Establishments for Young Girls" was established (in 1845), which in 1873 was annexed to the tutelar councils. In 1858 the first public day school, admitting girls of all conditions and religions, was established. (In 1880 there were 459 educational establishments—including orphan homes, foundling hospitals, etc.—known as the Marie Institutions.) In 1891 there were 30 public schools for girls which, together with gymnasia and pedagogic classes, were attended by 10,664 pupils. The instruction is similar to that in the 32 institutes for girls, where 7,680 girls were giving their attention to the Russian, French, and German languages, geography, history, mathematics, zoology, pedagogy, calligraphy, drawing, music, singing, gymnastics, and dancing. Several of these institutes have "special pedagogic classes in which particular attention is paid to the study of foreign languages and to proof lessons for training the pupils in the art of teaching." The final examinations entitle (when passed) to a diploma qualifying for teacher or as governess.<sup>3</sup>

In 1891-92 there were 455,167 girls reported as receiving an elementary education in Russia, 89,473 in schools of a secondary grade (these include girls' gymnasia and progymnasia), 3,832 in professional schools, and 400 in university colleges for women (in 1890).<sup>4</sup>

In 1869 the minister of public instruction gave permission for the organization of a series of public lectures, for women, in history, philosophy, and science, at St. Petersburg and Moscow. In 1872 higher courses were opened in Moscow, special attention being given to the study of universal literature and Russian history. In 1876 an imperial ukase authorized the foundation of higher courses, on various subjects, for women at different universities in Russia. There were no general regulations, and the organization of such courses was considered temporary. In 1884 a

<sup>1</sup> Doña Concepcion Arenal in *The Woman Question in Europe*, by Theo. Stanton.

<sup>2</sup> Short historical sketch of the Marie Educational and Charitable Institutions, St. Petersburg, 1893.

<sup>3</sup> These statements are from a short historical sketch of the Marie Educational and Charitable Institutions, St. Petersburg, 1893. A more complete presentation is found in the Report of the Commissioner of Education for 1893-94, pp. 401-409.

<sup>4</sup> Statesman's Year Book, 1895, p. 866.

committee was created to formulate the best plan of organization for the superior education of girls in the Empire, and in 1889 regular four-year courses for higher study were created. There are two divisions, the historico-philological and the mathematical.

(1) In the historico-philological section are taught: Religion, psychology, logic, history of philosophy, Russian language, old Slavonic, history of Russian literature, ancient and modern theory of literary forms, Slavonic idioms and literature, universal literature (this includes Italian, French, German, and English literatures in their connection with the development of Russian literature), Russian history, history of the peoples of Slavonic race, ancient history, history of modern times, history of arts, Latin language and literature.

(2) In the mathematical section: Religion, general course of mathematics, analytical geometry, algebraical analysis, differential and integral calculus, astronomy, physics, organic and inorganic chemistry, physical geography, and analytical mechanics.

In the year 1891 there were 385 students in the four courses, of whom 298 were in the historico-philological and 87 in the mathematical section. The tendency of study is toward history and literature, although the philosophical and mathematical students gave evidence of thorough study in such theses as "On the constitution of our self-consciousness, according to Taine and Strahoff," and "Euler's formulæ of quadratics," etc.<sup>1</sup>

Woman in medicine is discussed under "Woman in the professions;" Russian women in Swiss universities under Switzerland.

#### FINLAND.

The educational authorities of Finland permit women similar privileges to men in the matter of university study, subject to the restriction that any examination passed by a woman can not entitle her to other appointments than such as are in accordance with existing laws and regulations. Nor is any woman entitled to receive such free scholarships as are distinctly intended for men.

It is stated<sup>2</sup> that as early as 1870 a woman student passed an examination for admission to the university in Helsingfors, another followed in 1873, and then there is an interregnum until 1885. Seventeen women students were in attendance in 1889, increased to 44 in 1891 and to 56 in 1893. In 1894 there are 5 in the law course, 5 in medicine, 33 in the sciences, 30 in philology and history; total, 73.<sup>3</sup>

In the year 1893 there were 212 women obtaining a business education in commercial schools, 175 in the agricultural and dairy schools, 4,712 in secondary grade schools, and 263 preparing, in normal schools, for the teacher's profession.<sup>4</sup>

In the earlier years women desiring to enter the university were obliged to fit themselves for such purpose in private schools. Since 1883 there are coeducational schools opened to them.

#### EASTERN EUROPE.

The chief features of the organization or fundamental laws of Turkey are based upon the Koran. According to it "woman's education must be equal to man's" (chapter 22, verses 33 to 35). From the beginning of the reign of Mohammed there is mention of well-educated women,<sup>5</sup> but it is within the last twenty years that the subject of woman's progress has become of interest.

<sup>1</sup> Higher Education of Women in Russia, by Prince Serge Volkonsky. [See Report of the Commissioner of Education for 1892-93, pp. 687-690.]

<sup>2</sup> *Revue Internationale de l'Enseignement*, 15 février, 1896, pp. 180-182.

<sup>3</sup> *Statistisk Årsbok för Finland*, 1895.

<sup>4</sup> *Statesman's Year-Book*, 1895, and *Statistisk Årsbok för Finland*, 1894.

<sup>5</sup> The poems of Aysha, wife of Mohammed, are known in ancient Arabic literature; *Ḥafiseh*, teacher of Imans-Shafieh, was called "the doctor," on account of different literary works; *Husnieh* gained prizes in philosophy of law and ethics; the writings of Leila and Fitmet serve as models of Oriental literature; *Djemileh*, poetess, artist, and musician, was called "the gem of the fair sex;" *Aliéh Hanum*

The Turkish schools for girls at Constantinople in 1893 numbered 97, ranging from primary to normal, with 6,545 day scholars, 320 boarding pupils, and 178 teachers. The studies are Turkish language, history and geography of the Ottoman Empire, arithmetic, drawing and piano, needlework, and embroidery. The normal school has been established twenty-two years, and graduation therefrom entitles to a diploma permitting one to teach in Turkish houses or in girls' schools of the provinces.

The Greek schools for girls in Constantinople graduate pupils who have become directresses of other Greek schools in Turkey. The studies are the foreign languages, geography, mathematics, history, art, vocal and instrumental music, drawing, and painting. The Greek schools number 55, with 218 classes, 5,233 students, and 199 teachers.

The Armenian schools for girls in Constantinople are supported by three committees—the Armenian Catholic, the Armenian Gregorian, and the Armenian Protestant. They include elementary and secondary grades, with 67 classes, 1,880 pupils, and 250 teachers.

The schools of the Israelite Alliance educate many students free of charge. In 1893 they reported 201 pay and 967 free students and 36 teachers. The programme included French, Hebrew, German (that is, the elements taught to students of those nationalities), history and geography, arithmetic, natural history, physics, chemistry, drawing, singing, embroidery, and sewing; also laundry work, i. e., ironing. The main aim of these schools for girls is to educate the poorer classes.

The centers of education are at Constantinople, Smyrna, Salonica, Seres, Adrianople, Philippopolis, and Yañina. The college curriculum aims to be similar to that of European nations; the French tongue is compulsory in the schools; the works of foreign authors are studied under the direction of French and German teachers; in the higher elementary schools the studies include zoology, mineralogy, botany, cosmography, the elements of anthropology, and physics; the body, too, is well trained by gymnastic exercises. Late movements indicate the establishment of high schools for girls in the largest cities of the Ottoman Empire, as an outcome of a movement in Greece proper, where the closing of the higher gymnasia for girls was met by an appeal of all the students to the ministry of education, where their arguments brought about a reopening of the same.

In Bulgaria there were 42,206 girls receiving an elementary education in 1890 out of 261,968 girls of school age. Four gymnasiums for girls are also reported in the Statesman's Year Book for 1896, from which these facts are gleaned:

"In point of education the Bulgarian women of Macedonia and Thrace are now, in the towns, much on a par with their Greek neighbors. Formerly, in districts where Bulgarian national schools did not exist, the girls attended the schools belonging to Greek communities, but since the principality acquired its autonomy, the anti-Hellenic movement has succeeded, to a great extent, in substituting Bulgarian for Greek education in the Turkish provinces. Teachers are supplied from the training colleges of Bulgaria proper, where the schools are organized on the newest and most approved European systems. There is at Philippopolis a girls' lyceum, established eight years ago, at which 150 girls receive a high school education, many of whom become mistresses of Bulgarian schools in the Turkish provinces."<sup>1</sup>

In Servia all the schools under the ministry of education are free, even including the university. In the elementary schools 11,204 girls were receiving instruction in 1892-93; in the lower gymnasia 321 girls; in high schools for girls or normal schools, 612 girls.

---

(among contemporary women) has translated treatises and novels, and she wrote *The Mussulman Women*; *Tafur Hanum* is familiar with French, Turkish, Greek, Arabic, and Persian languages; *Emineh Semieh Hanum* is the author of an arithmetic. [See address on education and literature of the women of Turkey, delivered before the World's Congress Auxiliary, July 22, 1893, by Señorita Esmeralda Cervantes.] The women of Turkey are fully described, especially as regards habits and customs, in *The Women of Turkey and Their Folk-Lore*, by Lucy M. I. Garnett.

<sup>1</sup> *The Women of Turkey and their Folk-Lore*, by Lucy M. I. Garnett, London, 1890.

In Roumania, in 1892, there were 27 women who had entered the university at Bucharest and 26 at Jassy. The Roumanian minister of public instruction appointed a woman (in 1894) to the newly created position of professor of the German language in the university at Bucharest.

INDIA.<sup>1</sup>

From India comes the information that many earnest reformers are endeavoring to overcome the obstacles to the elevation of women in that country. In 1883 a commission was appointed to investigate the whole system of education in India. The education of women and the instruction of Mohammedians received special attention. In British India alone it is estimated that only 1.8 per cent of girls of school age attend school. Statistics of schools in 1893 showed that there were 3 women's colleges, with 101 students; 419 secondary schools, with 35,747 pupils; 5,399 elementary schools, with 284,250 girls attending; 1,496 private schools for girls, with 42,371 students. The census for 1891 gives 197,662 girls under instruction, 543,495 not under instruction, but able to read and write; 127,726,768 not under instruction and unable to read and write. No information was obtained in regard to 12,028,210 women. Generally speaking, the school education of Indian girls comes to an end between the ages of 10 and 12, at the age when American and English girls are just at the threshold of learning.

The most important movement in recent years is that aiming to give medical relief to the women of India. Lady Dufferin, the wife of Lord Dufferin, former viceroy of India, manifested great interest in this movement, which is referred to under the heading of medical instruction.

Among other women who take a foremost position in India is Dr. Jagannadham, a native of India, who first studied three years in Madras, then two years at the Edinburgh School of Medicine for Women. Having passed her examinations successfully, she obtained the diploma of the Scottish colleges. At Edinburgh she was demonstrator of anatomy, then for a year house physician in the Edinburgh Hospital for Women and Children. At present she is connected with the Kama Hospital in Bombay, but is to fill a position in the association established by Lady Dufferin.

Pundita Jumna Bai, a Brahmin lady, has taken an active part in establishing a female association at Jamnugger. This lady is a Sanscrit scholar, and is well versed in the Hindu Shastras. She has given readings from the Shastras before the Zenana ladies in Bombay.

The Punjab Association for the Promotion of Female Education supports and manages the Victoria School, with its ten branches in the city of Lahore. This school aids in the preparation of female teachers for schools throughout the province. Industrial, normal, and higher courses have already been, or are about to be, introduced in the Victoria School.

There are universities in Calcutta, Madras, Bombay, Allahabad, and the Punjab. These are merely examining bodies, but they have numerous affiliated colleges. The number of women students attending these higher courses of training is unknown to date, but a few years ago 13 European women and 3 native girls were among the successful students for matriculation at Bombay University, while at Madras 5 Tinnevely native Christian girls were successful candidates at the matriculation examinations. This was the first time that native girls from Tinnevely had passed the examination.

<sup>1</sup> The Statesman's Year-Book, 1895 and 1896, and other sources of information.

## JAPAN.

The latest statistics pertaining to girls' education in Japan are taken from the Report of the Minister of State for Education for 1892. Out of a total school population of 7,356,724 there were as follows:

|  | Women<br>teachers. | Girl<br>students. |
|--|--------------------|-------------------|
| Kindergarten schools.....  |                    | 5,480             |
| Elementary schools.....  | 3,401              | 967,972           |
| Normal schools.....  | 62                 | 973               |
| Higher girls' schools.....   | 180                | 2,803             |
| Special schools.....   | 9                  | 123               |
| Miscellaneous schools (includes language, drawing, music, and industrial schools)..... | 613                | 15,520            |

*Girls of school age.*

|  |           |
|--|-----------|
| Receiving prescribed course of instruction at close of year..... | 962,056   |
| Leaving school during the year—                                  |           |
| Having completed the prescribed course.....                      | 62,697    |
| Without completing the prescribed course.....                    | 98,473    |
| Not receiving instruction—                                       |           |
| On account of poverty.....                                       | 1,086,973 |
| On account of sickness.....                                      | 160,893   |
| For other (unnamed) causes.....                                  | 668,977   |

Total number of girls of school age, 3,453,065; of boys, 3,903,659; per cent of school population receiving instruction, 55.14.

Although women are still in a somewhat dependent condition in Japan, the study of other nations, and the influx of an educated foreign population—with highly educated women in their families, the return of Japanese students from other countries, all tend to indicate to the enlightened Japanese statesmen that broader fields of education are now open to women.

In the school system now found throughout the Empire, girls and boys are equally provided for. Every morning the streets of the cities and villages are alive with boys and girls clattering along, with books and lunch boxes in their hands, to the kindergarten, primary, higher, and normal schools. Every rank in life, every grade in learning, finds its proper place in the new school system, and the girls eagerly grasp their opportunity and show themselves apt and willing students of the new learning offered to them. Upon the young girls the influence of the school is to make them more independent, self-reliant, and stronger women. The women of to-day in Japan who are taking the lead in the elevation of women are those belonging to the Samurai class, i. e., those who belong to military circles.<sup>1</sup> According to the statement of Miss Bacon they are endeavoring to "establish, upon a broader and sure foundation, the position of women in their own country, for the Samurai women to-day are eagerly working into the position of teachers, interpreters, trained nurses, and whatever other places may be honorably occupied by woman."

There are and have been several Japanese women studying in this country, and statements indicate that Japanese girl students are by no means rarities here. There is one at Wellesley and a second, Miss Fuji Tsukamoto, was at Wilson College for Women at Chambersburg, where she was considered one of the brightest students. She graduated in June, 1894, and on commencement day led in a debate on the interesting question, "Have the more recent influences of the Occident on the Orient been a benefit to the latter?" There was still another Japanese girl, Miss Tsuno Hirata San, at Western Maryland College, Westminster, Md., where she was graduated in 1890. Returning to Japan, she married and is now working in the missions at Nagoya. Vassar College also claims a Japanese graduate. Japanese boy students are common enough, and the girls also appear to appreciate American educational institutions.

<sup>1</sup> Japanese Girls and Women, by Alice Mabel Bacon, 1891.

Miss Ume Tsuda, a special student at Bryn Mawr, is endeavoring to raise money to found a scholarship for Japanese women in America so that they may be prepared as teachers to return to their own country. The reserve of Japanese women and the class distinctions make it easier for the Japanese to teach women than for foreigners.

#### THE SPANISH-AMERICAN COUNTRIES.

There is less available information in regard to the higher education of women in these countries than in Europe, but as social factors the Spanish women are preeminent.

In Mexico a decree was promulgated in 1890 for a normal school for women teachers in the City of Mexico, free instruction in a four years' course to be given to the students. Then a special fund was provided for 80 meritorious students, who were, however, to teach for three years after finishing the course. The Government has also provided for the education of women in a literary and scientific institute which has a high grade of study (including trigonometry, calculus, philosophy, chronology, literature, physics, chemistry, natural history, and bookkeeping). A lyceum for women was also founded in 1878 which takes up subjects that are considered essential to the proper training of women. This is also supported by Government funds. The preparatory school of San Ildefonso, which has trained many distinguished men, has also received girls who desired a similar grade of educational advantages.

The schools of arts and trades for women are also crowded with students, from the young girl to the woman of mature years, all of whom receive free instruction in such branches as printing, bookbinding, sewing, fancy work, knitting, trimmings, fringes, making cords and tassels, etc. Piano and vocal music are also taught, and the pupils have an elementary course of study.

In 1892, according to the *Boletín Semestral de la Dirección General de Estadística*, there were 899 Government and 927 municipal schools for girls. Enrolled in the girls schools were 138,037 pupils; in average attendance, 107,725. These schools appear to be of elementary grade, but it is not specifically stated.

In Costa Rica, according to the *Memoria de Instrucción Pública*, año 1892, there were 65 women preparing to become teachers, and 11 had already received the diploma requisite for such position. In the *Colegio superior de Señoritas* 75 women were following a secondary course of instruction; professional instruction included 16 women students. Doubtless this does not represent the number of women interested in higher studies, but the report does not enlarge upon this phase of education. According to the "*Anuario de la Inspección general de Enseñanza*, año 1892-93" there were 7,421 girls enrolled in elementary grades, 5,281 in regular attendance, 1,471 graduates. "Elementary instruction of both sexes is obligatory, free, and provided for by the government," so it is stated in "*The Republic of Costa Rica*" by J. B. Calvo, 1893.

In Guatemala, as is indicated by the law<sup>1</sup> for public instruction, the same regulations apply to both boys and girls in schools of different grades. It is stated, however, that sewing and domestic economy enter into the course for girls, and they are not obliged to matriculate from the secondary grades.<sup>2</sup> Private schools and colleges for girls are reported, but the number is not definitely stated. There are 434 elementary schools for girls.

In Honduras there are three colleges, or secondary grade institutions, for women.

In Nicaragua of late years there has been manifest interest in regard to the education of girls. Among other institutions of a secondary grade in the city of Granada there is a college for young ladies, where several hundred pupils are enrolled. The curriculum is quite extensive, but special attention is paid to musical studies.

<sup>1</sup> Ley orgánica y reglamentaria de instrucción pública, 1893.

<sup>2</sup> Those who matriculate receive the title of "Graduada en Ciencias y Letras." See *Ley orgánica y reglamentaria de instrucción pública*, 1893, p. 25.

Several of the graduates of this college are said to be following higher educational courses in the United States.

In Argentina, in 1894, there were 83,648 girls in public schools of elementary grades and 3,767 women teachers; in private schools, 30,473 girls and 1,161 teachers; in primary departments of normal schools, 6,097 girls and 260 women teachers.<sup>1</sup> The three higher grade normals—one for men and one for women, and one mixed—train professors and teachers capable of directing or superintending in the public schools. The programme of study is similar for men and women. Until within a few years "the women of Argentina were content with such instruction as made them fascinating members of society,"<sup>2</sup> but now they desire still higher study. According to Dr. Zubiaur, "a new era in the social evolution of the Argentinian people has dawned, and a stimulating effect upon the other Latin-American countries has been produced by the overcoming of ancient prejudices in regard to woman's status." The Señorita Cecilia Grierson has lately obtained her diploma as M. D., after six years of study at the faculty of medicine in Buenos Ayres. The señorita was the first young lady of Argentina to win such a degree. Prior to entering upon her medical studies she obtained the diploma of instructress from the normal school of the capital.<sup>3</sup>

In Brazil the statistics appertaining to the education of girls are quite meager. Ten years ago there were reported to be 1,315 schools for girls throughout Brazil. In 1888-89 it was stated that there were 500 coeducational schools.<sup>4</sup> In the Municipio Neutro, or federal district, which includes Rio de Janeiro and its environs, there were, in 1892, 120 public elementary schools of the first grade (59 for boys and 61 for girls), with an enrollment of 4,444 boys and 4,056 girls; classed as subsidized schools were 32, with 667 boys and 879 girls; the normal in Rio de Janeiro had 248 women pupils and 32 men. The Instituto Benjamin Constant had 27 men and 21 women pursuing its course (in 1892), which included science and letters, universal history, and music. This is an institute for the blind. Private institutions (collegios) numbered, in the Municipio Neutro, 119, with 6,073 boys and 3,628 girls.<sup>4</sup> One is led to infer that the sexes are separated, and that these are schools for boys and schools for girls, but the matter is not specifically stated. It is known, however, that according to early laws coeducation was not allowed, but about 1885 Dom Pedro II established a number of schools where boys and girls recited together, but were kept apart outside of the recitation rooms.<sup>5</sup> A writer on "Brazil: Its Condition and Prospects," describes a girls' school in which there was a seat of honor "where a pupil sits for half an hour who has her lessons the most perfect in her class." The day of his visit three pupils stood up because they had been the recipients of this favor during that forenoon.<sup>5</sup>

In Chile women are well educated in so far as general accomplishments are concerned. They have a special aptitude for modern languages, and many speak with fluency French, German, and English. In the Instituto Nacional, the oldest college in Chile, which received its charter from the King of Spain over one hundred years ago, there are many earnest, thoughtful students. Among them there are said to be two or more women who are studying law. In the Colegio Norte Americano, established under the auspices of the M. E. Church of America, there are 250 girls studying higher branches, as well as music, painting, drawing, and the languages.

In Uruguay there were 591 women engaged in the profession of teaching in public schools and 549 in private schools. In the National Normal School for Girls from

<sup>4</sup> Relatório apresentado ao Vice-Presidente da Republica dos Estados Unidos do Brasil pelo Dr. Fernando Lobo, Ministro de Estado, da Justiça e Negocios Interiores. Abril de 1893.

<sup>5</sup> Brazil: Its Condition and Prospects, by C. C. Andrews, New York, 1891.

1877 to 1891 there were 114 girls who received "the title of professor for the first degree," and 29 "for the second degree." In the public schools of various grades 19,135 girls were under instruction. Women are also engaged in charitable and philanthropic work, and among such organizations is the *Ateneo de la Mujer*.

In Venezuela, according to Aristides Rojas, in his *Origenes de la Instrucción Pública en Venezuela*, a college for girls was founded as early as 1768 and placed in charge of the civil authorities of Caracas. It was called "*Colegio de Niñas Educandas*," and aimed more especially to teach orphans and poor girls some handiwork that would be useful to them. About the same date a college and convent school for young ladies of higher degree was founded and well endowed. Later developments in regard to woman's education are unchronicled, but it was stated in 1893 that there "were 14 national colleges for women and a normal school for girls." Pupils are not specified.

## WOMEN IN THE PROFESSIONS.

### WOMEN IN MEDICINE.

The endeavor to present a complete account of what woman has accomplished in the medical profession alone would be futile; the facts presented will speak for themselves.

According to Dr. Mary Putnam Jacobi,<sup>1</sup> "the history of the movement for introducing women into the full practice of the medical profession is one of the most interesting of modern times. This movement has already achieved much and far more than is often supposed. Yet the interest lies even less in what has been so far achieved than in the opposition which has been encountered; in the nature of this opposition, in the pretexts on which it has been sustained, in the reasonings, more or less disingenuous, by which it has claimed its justification. The history, therefore, is a record not more of fact than of opinion. And the opinion expressed has often been so grave and solid in appearance, yet proved so frivolous and empty in view of the subsequent event, that their history is not unworthy careful consideration among that of other solemn follies of mankind."

The reasons that women naturally manifest more interest in the medical profession than in any other profession are, according to Dr. Jacobi, "the special capacities of women as a class for dealing with sick persons are so great that in virtue of them alone hundreds have succeeded in medical practice, though most insufficiently endowed with intellectual or educational qualifications. When these are added, when the tact, acuteness, and sympathetic insight natural to women become properly infused with the strength more often found among men, success may be said to be assured."

If one remembers that even in the early fifties advanced courses of study for women were hardly known in this country, and that even for men the standard of attainments, from the medical side, was low, then one may look with interest upon the following table, which shows that in 1892-93, notwithstanding all the obstacles that had to be overcome, 1,302 women were enrolled in the medical schools of the United States<sup>2</sup>:

|                      | Schools. | Students. |
|----------------------|----------|-----------|
| Regular .....        | 36       | 827       |
| Eclectic .....       | 9        | 78        |
| Homeopathic .....    | 13       | 330       |
| Physio-medical ..... | 2        | 10        |
| Graduate .....       | 4        | 57        |

<sup>1</sup> From *Woman's Work in America*, by Annie Nathan Meyer.

<sup>2</sup> From Report of the Commissioner of Education for 1892-93, p. 1627.

Add to this the fact that there are 4,555 women physicians and surgeons in the United States, and that 3,000 women have been licensed to practice within the last ten years, and that there are 7 medical schools for women alone, then one may well agree with Dr. Jacobi that "the change from the forlorn conditions of the early days has been most rapid, and those who survived the early struggle, and whose energies were not so absorbed by its external difficulties that not enough were left for the intrinsic difficulties of medicine, have been really invigorated by the contest."

The statistics cited indicate the various steps taken in the medical profession by women. The question of further needs arises. "Future advance for the education of women in medicine must be in the line of their admission to the schools where the highest standard of education is maintained, and to such affiliation of their own schools with universities as may bring them under the influence of university discipline. There is no manner of doubt that, with a few unimportant restrictions, coeducation in medicine is essential to the real and permanent success of women in medicine."

And, furthermore, it may be said that "because women require the intellectual companionship of men, to be able to recognize the highest intellectual standards, or to attain them in some cases, and to submit to their influence in others, it does not follow that they have no special contributions of their own to offer to the work of medicine."

High standards should be the aim of women as well as men, and it may be said that "Medical education in this country is now making one of the longest strides forward that has occurred in its history. This step is the lengthening of the course to three and four years of eight or nine months, instead of the old course of two years of four or five months."<sup>1</sup> Another point has also to be taken into consideration, that is, regulations governing medical education vary in the different States. In New York<sup>2</sup> a woman must pass the State regent's examination in spelling, arithmetic, elementary English, English composition, geography, United States history, and physics before she can matriculate at college. After the M. D. degree has been obtained another State examination, covering the studies of the course, must be passed before she can practice. This applies to men and women alike. For examinations in other States see article on Medical Education.<sup>3</sup>

The first efforts made in England by women who desired to study medicine are due to Miss Garrett (now Mrs. Garrett Anderson, M. D.), who in 1860 began the study of medicine with a view to registration and practice under the medical act of 1858. Dr. Elizabeth Blackwell had obtained a degree of medicine in 1849 in America, and was already a practicing physician in England, but Miss Garrett tried for some time "to obtain admission as a student at Apothecaries' Hall, London, where she attended some of the classes with male students; in lieu of attendance upon others which were forbidden, she paid comparatively heavy fees for private tuition by recognized teachers. Many difficulties were thrown in the way of her receiving hospital instruction; these her energy and ability surmounted, and in 1865 she succeeded in obtaining registration as a licentiate of Apothecaries' Hall. Thus she became a legal and 'duly qualified' medical practitioner. Her title of M. D., however, she acquired from no English examining body, but from the University of Paris, where she passed the necessary examination with great distinction."<sup>3</sup>

This movement initiated by Miss Garrett was soon continued by Miss Sophia Jex Blake, who in 1869 applied to the University of Edinburgh for admission to medical study with the purpose of taking a degree. The opposition then encountered was set aside after five months' deliberation by the university court, when other women joined with her in desiring similar opportunities. Five women took the same courses

<sup>1</sup> Report of the Commissioner of Education for 1892-93, pp. 1617-1632.

<sup>2</sup> Article in New York World of April 7, 1895.

<sup>3</sup> Woman's Work and Worth, by W. H. Davenport Adams, London, 1880.

as the male students, matriculated and passed the same examinations. Again there was determined opposition on the part of the university authorities. As the number of women desiring medical study had increased to 10 in 1874, their friends introduced a bill into the House of Commons "to remove doubts as to the powers of the universities of Scotland to admit women as students, and to grant degrees to women."<sup>1</sup> This bill was thrown out in 1875.

"Meanwhile a strenuous and, as it proved, a partially successful effort had been made to further the movement in another direction. In the autumn of 1874 was established the London School of Medicine for Women, with a strong staff of eminent teachers, and the number of students who enrolled themselves on its book conclusively proved that such a school was wanted and would be vigorously supported. But another difficulty arose. The medical examining body considered very properly that students coming before them should have received practical clinical instruction in a hospital and by the bedside. To provide such a hospital *de novo* and at once was not possible. The London School of Medicine accordingly applied to existing hospitals to admit students, but in every case met with a refusal. What was to be done? Happily public opinion had by this time begun to tell upon Parliament and the Government, and in 1876 Government agreed to favor a bill introduced for the purpose of enabling the British examining bodies to extend their examinations to women as well as men. Before the end of the session the bill received royal assent and became a law. A few months later the Irish College of Physicians availed themselves of its provisions, and admitted to their examinations Dr. Elizabeth Walker Dunbar, Dr. Frances Hoggan, Dr. Louise Atkins (M. D.'s of Zurich), Dr. Sophia Jex Blake, and Dr. Edith Pechey (M. D.'s of Berne), who were thus entitled to places on the medical register. Not long afterwards the Royal Free Hospital generously opened its doors to the students of the London School of Medicine for Women, and this was followed by the resolution of the senate of the London University to admit women to their medical examinations and degrees. Thus the battle was won in England."

In 1894 the first degrees in medicine were conferred in Scotland on two ladies. The following is an interesting description of this event:

"At the graduation ceremony in Glasgow University on July 26, for the first time in the history of Scottish universities the degrees of bachelor of medicine and master in surgery, M. B., C. M., were conferred on two ladies. Principal Caird, vice-chancellor of the university, officiated, and there was a large representation of the university teaching staff. The Bute Hall was filled by a numerous audience of students of both sexes and of the general public. As Miss Marion Gilchrist, who ranked third on the list of the graduates who took the degrees 'with high commendation,' passed up to the dais to be 'capped' by the principal, she received a perfect ovation of enthusiastic applause, which was warmly joined in by the professors: and Miss Lillian Cumming was quite as heartily welcomed.

"Both the ladies who have the honor of being the first graduates in medicine of any Scottish university have studied for the last seven years in Queen Margaret College, now the woman's department of the University of Glasgow, viz, three years in arts and four years in medicine. Miss Marion Gilchrist was born at Bothwell Park, 9 miles from Glasgow, and received her education previously to joining the college in schools at Bothwell and Hamilton and by means of private study. In her college career, after distinguishing herself in her art classes, she took the general certificate of Queen Margaret College, the university degree in arts not being open to women at the time.

"In the course of her medical studies she stood first in her class in zoology, practical chemistry, anatomy, histology, physiology, surgery, medicine, pathology, and midwifery. She took her clinical work in the Royal Infirmary and in the Royal

<sup>1</sup> Woman's Work and Worth, by W. H. Davenport Adams.

Hospital for Sick Children, in both of which abundant facilities are given to women students. She has now been appointed assistant to Dr. Joseph McGregor Robertson, a physician in practice in the west end of Glasgow.

"Miss Alice Lillian Louisa Cumming was born at Houston, Renfrewshire, and educated at schools in Glasgow. Her seven years in college have been characterized by steady, persevering, and excellent work. She will begin her medical practice by acting as assistant to her father, Dr. James S. Cumming, Blythwood Square, Glasgow.

"Founded in 1882 (by the Glasgow Association for the Higher Education of Women, which was formed in 1877 with the object of bringing university instruction or its equivalent within the reach of women), Queen Margaret College, in 1890, added to its faculty of arts a school of medicine for women. This was organized entirely on university lines, and with the view of preparing for university degrees; and when, in 1892, in consequence of the ordinance of the universities' commissioners authorizing the Scottish universities to admit women to instruction and graduation, Queen Margaret College became the women's department of the University of Glasgow, its classes in medicine, taken previously to its incorporation with the university, were recognized as preparing for the degree.

"Hitherto it has been chiefly to the younger universities and colleges in Britain that women have had to look for admission to instruction and graduation in arts and medicine, and although instruction and graduation in arts has been granted by all the Scottish universities for each two years, the fact that one of the oldest universities in Scotland (the University of Glasgow was founded in 1450) has now led the way in conferring its medical degrees on women taught within its own walls, marks a new accession to the facilities afforded for the education of women which will be welcomed by all who are interested in their welfare."

"The first French woman to take a medical degree was Mlle. Verneuil, who is still practicing at Paris (in 1883). She graduated from the Paris Medical School in 1870. Up to 1881 six more French women had followed her example, five taking their degree at the capital, and one at Montpellier. Since that time several new names have been added to the list, the last being Mlle. Victorine Benoit, who was graduated at Paris in August, 1883, with the highest approval of the board of examiners, composed of such doctors as Potain, Strauss, Rendu, and Monod."<sup>1</sup>

The Paris Medical School was ever open to women, and this is due in part to Laboulaye, who, when asked, reported to the minister of public instruction: "The rules of the school say nothing on the subject. It would, therefore, seem the best and the simplest course to require of women who desire to pursue medicine the same preparatory studies and the same tests for graduation which are demanded of the male students, and thus allow both sexes to enjoy the same advantages offered by the school."

The general attitude of the public and of male physicians in France is described by a lady student, who says:

"The medical faculty<sup>2</sup> of the University of Paris opened its doors to women in 1868, but at first only a very few availed themselves of the privileges thus offered. In 1878 the number in attendance was 32; during the next ten years (1878-88) it increased to 114, and is at present 183, of whom the great majority (167) are Russians. The remainder are Poles, Roumanians, Servians, Greeks, and Scotch, and only 1 German. \* \* \* Many of them, chiefly Russians, have been through the gymnasium; others have acquired a more or less thorough knowledge of literature, history, the natural sciences, and philology in such secondary schools as were accessible to them. As foreigners, they must all be examined in Latin and Greek before admission, and be able to translate passages from the easier classical writers, Cæsar and Xenophon, at sight, and to analyze them grammatically. The courses of study

<sup>1</sup> From *The Woman Question in Europe*, by Theodore Stanton (pp. 278-279), New York, 1884.

<sup>2</sup> See *The Nation*, February 14, 1895.

are pursued conjointly with the young men, and this association, so far from producing a demoralizing effect, tends to elevate and refine both sexes. \* \* \* The professors and directors of the hospitals praise the conscientiousness and diligence of the women, and acknowledge them to be, both in general intelligence and in special knowledge, fully equal to the men. The latter also admit the truth of this statement, and assert that they ought to be even superior in these respects, since they are not compelled to waste their time in cafés and cabarets."

Under the heading of liberty of the professions, M. Ostrogorski<sup>1</sup> states that in several countries women are permitted to be physicians or pharmacists. He cites England, Holland, Belgium, Sweden, and Russia as having by degrees permitted what seemed contrary to customs and laws. The Belgian Parliament has decided that "women may be admitted to the full practice of medicine and pharmacy." Between 1881 and 1891 17 women passed the pharmaceutical examination, and 14 received different degrees in the medical faculties of Belgium. Further information on this subject is found in a preceding section of this chapter.

Holland has 4 women doctors; the first, Mlle. Aletta Jacobs, having a diploma of Groningen University, established herself in Amsterdam on September 15, 1879, after having completed a very brilliant course of studies. She was authorized by Minister Thorbecke to practice medicine. Another medical woman, Mme. Du Saar, or Dusart, has obtained a great reputation as an oculist. Mme. Tuschenbrack is a talented gynecologist, and was for many years assistant to the first gynecologist of Amsterdam, M. Mendes, from Lyons. The fourth woman doctor is Mme. Johanna C. Spruyt. A decree of November, 1870,<sup>2</sup> admitted women to the practice of pharmacy in the Netherlands, and a large number of girls have studied for this purpose. There are 727 aids<sup>3</sup> of pharmacy, of whom 414 are men and 313 women. But although the Dutch universities have conferred 15 apothecary diplomas on young girls, there is not one woman who conducts independently a private pharmacy. The first pharmacy conducted by a woman will soon be opened in Utrecht, by Mme. Th. Olivier.

Seven women possessing an apothecary's diploma practice their professions; one, Mme. Alice Grutterink, is chief pharmacist of the Coolsingel Hospital in Rotterdam; another is pharmacist at the Hospital Wilhelmina in Amsterdam. Since 1880 a lady pharmacist, Mme. Charlotte Jacobs, sister of the woman doctor, has established herself in Batavia, where she owns a pharmacy, and conducts it with the assistance of her husband.

There are in Holland women dentists and numerous nurses, trained in the special schools of Croix Rouge in The Hague, or Croix Blanche at Amsterdam.<sup>4</sup>

In Sweden a royal statute of January 18, 1861, permitted women to become surgeons, and a decree of June 18, 1861, gave women the right to learn dentistry and to practice that profession. On June 3, 1870, by royal decree, women were granted the right to be examined for admission to the universities, to study medicine, and to graduate as doctors of medicine at the universities, and likewise to become practicing physicians. By a resolution of June 12, 1891, women are granted the privilege to be admitted as apprentices in apothecaries' shops, and after the required examination, to enjoy the same privileges as male chemists.<sup>5</sup>

In Denmark women obtained university privileges in 1875, and about half of those who enter the university take up the medical course. It is stated that four women have already become physicians.

In Iceland a decree of December 4, 1886, conferred upon women the right to the

degree of bachelor of letters (*bachelier ès-lettres*) and admitted women to the school of medicine and of theology. They may practice medicine.<sup>1</sup>

In Norway a law of June 14, 1884, gave university privileges to women; for the last six years they have been entitled to study pharmacy and to manage and own dispensaries, subject to conditions. In 1894 it is reported that a lady, Miss Eide, was graduated from the university, and was empowered to be an apothecary, the first woman apothecary in Norway.

In Finland women are admitted to the university as students under similar conditions as male students. In 1894 there were five women in the medical faculty at Helsingfors.<sup>2</sup> Conditions as to medical practice are not known to date, but they doubtless conform to those of the Russian Empire.

In Russia an imperial ordinance of August 2, 1890, regulates the conditions of future medical practice for women.<sup>3</sup>

A medical faculty for women was created in 1872, and the first year's course was attended by 106 women. During the second year there were 99 in attendance. After five years 69 women received diplomas. Political and financial reasons caused the cessation of the course, although it was successful in every way. Students were allowed to finish their studies, but no more were to be admitted.<sup>4</sup> In 1892 it was again reported that the medical school was to be reopened, or, rather, that a medical institute for women physicians was to be created at St. Petersburg. The city was to give the necessary buildings and 160,000 rubles,<sup>5</sup> the minister of public instruction 70,000 rubles, the minister of war 84,500 rubles, the Society for the Encouragement of Medical and Pedagogical Courses 2,500 rubles. A favorable report had been made by the Senate in regard to this medical institute, and later information indicates that the plan was carried out.

"The privy councillor, Dr. Von Anrep, has been appointed director of the Medical Institute for Women at St. Petersburg, which is designed chiefly to provide female practitioners of the healing art for the country districts of Russia. The courses of study, while giving special attention to diseases of women and children, and to obstetrics, embrace anatomy, physiology, general and special pathology, therapeutics, diagnostics, physic, chemistry, mineralogy, toxicology, surgery, sanitary science, dermatology, ophthalmology, psychiatry, neurasthenia, and kindred disorders, and extend over five years. A school of pharmacy is also to be established in connection with the institution." Candidates for admission are expected to be not less than 20 nor more than 35 years of age."<sup>6</sup>

Special courses of lectures were opened in 1891 at St. Petersburg, in the Alexander Hospital, for women who are working there as chemists' apprentices. Women are allowed to serve in this capacity in Russia if they have followed the full course of a girls' high school or have passed an examination equivalent to that demanded of the male candidates, including as much Latin as is required of the men. A practical difficulty arose, however, viz, that women were found to be much slower in mastering the profession of chemist than men, because they were insufficiently grounded in botany, chemistry, mineralogy, etc. In order to remove this difficulty the town hospital commission has opened special courses in the above-named hospital where women can receive instruction in pharmaceutics, botany, and chemistry. The necessary funds are provided by two anonymous members of the hospital commission. The lectures are to be delivered by professors of the Military Medical Academy.

The example thus set by private individuals has been speedily followed by the

<sup>6</sup> *The Nation*, October 17, 1895.

Russian Government, which, in connection with the discussion on the new regulations for pharmaceutical students, proposed to organize special courses for women, in which they may acquire a solid preparation for the profession.<sup>1</sup> These courses to be opened to women between the ages of 17 and 40 who have passed through a high school or equivalent institution, and, moreover, have passed a supplementary examination in Latin and science. After a three years' course students receive the rank of assistant without having to spend time in practical training as apprentices. It is explained that they will gain the necessary practical experience in the laboratories of the universities during their three years' course.

At the International Hygienic Congress, held in Budapest in 1894, reports and essays of much scientific value were given, among them one by Professor Erismann, of Moscow, the renowned Russian hygienist, regarding the study of medicine for women and the activity of women physicians in Russia. He arrived at the following conclusion: "Experience has shown us that in Russia women physicians have been very useful, and that in certain positions, as in female seminaries and among the Mahometan population, their places can not be filled by men. Experience has also shown us that our women physicians are not only perfectly competent to the usual practice of medicine in cities, but also fulfill with skill and perseverance the far more difficult duties which devolve upon a city physician in the dispensary work among the poor. Even in extraordinary cases, such as war and epidemics, they have shown themselves fully equal to the heaviest demands. The fears that the women physicians, through the peculiarities of their organization, would be hindered from following their vocation in a desirable manner, have proved groundless. Finally, experience has also shown us that among the people not only women and children, but also the men, have sought women physicians with the fullest confidence, and that in a high degree they have won the trust and love of the public. The combination of the tender character of the woman and her innate talent for the care of the sick, with medical knowledge, is therefore to be regarded as an exceedingly fortunate one. For these reasons it is desirable that opportunity should be afforded to women to gain a scientific education in medicine, such as is given to men, and after fulfilling the same preliminary preparations the same rights should be accorded to them as the State accords to men. Also there is no moral reason for separating the medical schools for women from those for men, or of building separate rooms for them. On the contrary, it is precisely for ethical reasons that it is desirable that to the women be accorded directly admission to the lectures of the already existing medical faculties."

In Austria the minister of worship and public instruction, by decree of May 6, 1878, forbade women registering as "hearers," or matriculating as students in the universities of the Empire,<sup>2</sup> but women possessing medical diplomas in other countries were permitted to practice medicine throughout the Austro-Hungarian dominions.<sup>3</sup>

The position of women in Germany, as regards the professions, was given in detail under, "The education of women in different countries." It is here reiterated that medical lectures have been attended by women in Freiburg University, in Baden, but until the Government opens its medical examinations to them the attendance upon medical lectures is of no practical value.

In Switzerland 4 women students were in the medical faculty of Geneva University as far back as 1877-78. In all the universities it is the medical faculty which seems to attract the greatest number of women students. More details regarding this matter are found under "Russian women in Swiss universities." It is reported from Egypt that a woman, graduate of the medical faculty in Paris, was appointed in 1892 or 1893, physician to the mother of the Khedive.

<sup>1</sup> Journal of Education, London, May, 1891.

In Roumania a lady, Mme. Olga Sacara Tulure, has just passed her examination as M. D. before the medical faculty in Bucharest. Her specialty is diseases of children.

In Bosnia and Herzegovina the need of highly educated women seems to be attracting attention, for the authorities have advertised for a woman physician whose appointment is to cover a one year period.

"Dr. Anna Bayerova and Dr. Bohmulla Kectova have been appointed to the position of provincial physician of Bosnia. Both of these women studied the regular course in high schools for girls, and afterwards prepared themselves by private study for the university. They studied the curriculum of the gymnasium, and passed their examinations before a professor. Then they applied for admission to the famous university of Prague, but were refused admission. They then entered the University of Zurich, and graduated with honors—Dr. Kectova having been appointed assistant to Professor Rose in the woman's department. Both returned after some years to Prague, and since the practice of medicine was prohibited took an extra course in obstetrics and followed this profession, waiting patiently for an opportunity to open the way for their sisters. Both of the doctors were patriots and earnest advocates of woman's cause, and their proceedings were watched with great interest.

"The appointment which came first, Dr. Anna Bayerova, was hailed with joy by all the women of Bohemia. She proved herself such a success that Dr. Kectova was called to a similar position in Bosnia. The ladies are under military rules and wear a military uniform."<sup>1</sup>

Women in the medical profession in Italy, Spain, and Portugal have already been referred to in an earlier part of this chapter, but it may be stated that "as early as the fourteenth century a female physician acquired a great reputation in medicine in Italy." In 1891 the medical school of Lisbon graduated a woman as M. D., and last year (1895) the Queen of Portugal took a similar degree. In Spain, since 1892, several women are on university rolls as students, principally in medicine and pharmacy. One of the assistant physicians at the city hospital [presumably in Madrid] is Doña Concepción Alexandre.<sup>2</sup>

The regulations governing the medical profession for women are not specifically stated in these last-mentioned countries.

#### WOMAN IN THE LAW.

Next to the medical profession in point of interest to women comes that of law, and endeavors are made to trace woman's advance in this field of action. Here at once difficulties are met, and one is inclined to say that woman's position in the legal profession is hardly recognizable as yet, so few in number are those who have conquered a place before the law in this and other countries. It is a matter of record that there were 56 women attorneys in this country in 1882, 31 of whom had graduated from law schools. In 1894-95 there were 65 women pursuing a law course in professional schools, and it may be said that the majority of law schools admit women when requested to do so.<sup>3</sup>

It is just to state that woman has not as yet had time to develop into a Webster or a Choate, and yet it is of interest to understand her present position before the law.

As is stated by Ada M. Bittenbender,<sup>4</sup> in regard to the full-fledged lawyer, "for various reasons quite a number of women admitted have not so far identified themselves with law practice. Others have allowed themselves to be drawn into temperance and other reform movements, but the greater portion at once settled down to follow their chosen pursuit with no deviation, and are ripening into able, experienced

<sup>3</sup> Chapter on professional education in Report of Commissioner of Education for 1892-93.

<sup>4</sup> *Woman's Work in America*, by Annie Nathan Meyer.

lawyers, and winning their fair share of clientage. Some confine themselves mainly to an office practice, seldom or never appearing in public; others prefer court practice. Those who enter the forum are cordially countenanced by brother lawyers and acceptably received before court and jury. As a rule they are treated with the utmost courtesy by the bench, the bar, and other court officers."

The first woman in this country to be recognized as an attorney at law was Margaret Brent, back in the colonial days, to whom, as executrix of the estate of Leonard Calvert<sup>1</sup>—first lord proprietary and governor of Maryland—was accorded the privilege of being received as his lordship's attorney. She also appeared before the courts in her own affairs, as well as those of her brother.

"The first woman since the days of Mistress Brent to ask for and obtain admission to the bar of this country was Arabella A. Mansfield, of Mount Pleasant, Iowa. She studied in a law office and was admitted to the Iowa bar in June, 1869, under a statute providing only for admission of 'white male citizens.'"

The first woman to graduate regularly from a law school was Miss Ada H. Kepley, from Union College of Law in Chicago. This was in 1870.

A movement of benefit to the law students of Michigan University was the forming, in October, 1886, of the Equity Club, its object being to encourage each other in their chosen profession.

"Another association of women lawyers,<sup>2</sup> organized in 1888, is the Woman's International Bar Association, having for its object: (1) To open law schools to women; (2) to remove all disabilities to admission of women to the bar, and to secure their eligibility to the bench; (3) to disseminate knowledge concerning women's legal status; (4) to secure better legal conditions for women.

"Women lawyers are welcomed as members of bar associations established by their brothers in the profession. Many have availed themselves of this privilege."

Women lawyers of this country are claiming the right "to practice before all courts, State and national, the same as male lawyers," and when the existing statutes forbid they appeal to the legislature.

The position of women in the legal profession is hardly recognizable in other countries as yet, and it is said that Hawaii is the only country outside of the United States where women can practice law. Be this a fact or not, it is well known that women have been permitted to study in legal faculties of the universities in several countries, and only when she has desired to enter the arena with men has she found herself debarred by laws, regulations, and edicts, then or previously promulgated.

In 1889 a lady graduate of the University of Michigan established herself as a lawyer in the Sandwich Islands, entering her father's law office in Hawaii. Miss Hitchcock has also acted as sheriff ad interim.<sup>3</sup>

In Russia, in 1875, a woman requested permission to be a "femme avocat."

An imperial ukase of January 7, 1876, forbade women to enter upon the profession (*interdisant aux femmes l'accès de la fonction d'avocat*). A similar attitude was adopted between 1886 and 1889 by Italy, Switzerland, Denmark, and Belgium toward women who desired to enter upon the law.<sup>4</sup>

In Italy it seemed to be forgotten that in centuries past there were famous women teaching law in the universities or noted for their legal lore.<sup>5</sup>

<sup>1</sup>He was attorney (vide History of a Palatinate, by W. H. Browne) for Cecilius Calvert, second Lord Baltimore.

<sup>4</sup>Tribunal of the Second Ward of Zurich, November 24, 1886; Federal tribunal of Switzerland, January 29, 1887; court at Turin, November 14, 1883; court of cassation (Turin), May 8, 1884; supreme court of Denmark, October 9, 1888; court of Brussels, December 12, 1888; Belgian court of cassation, November 11, 1889.

<sup>5</sup>La donna Italiana descritta da scrittrici italiane in una serie di conferenze tenute, all' Esposizione Beatrice in Firenze, 1890.

Arguments innumerable were presented at Turin when the Signorina Lidia Poët,<sup>1</sup> after finishing her legal studies, claimed a place in the legal fraternity, but these arguments were of no avail.

In Belgium, in 1888, Mlle. Marie Popelin, who had followed the legal course of one of the Belgian universities, essayed to break down the barriers against women lawyers, but was unsuccessful. The court at Brussels decided that women had neither "the leisure, force, nor aptitude necessary for the struggle and fatigues of the legal profession."<sup>2</sup>

France has but few law students as yet in the faculty of law, or rather the faculties, for, while there is only one University of France (having the degree-giving power), there are "faculties" in Paris and in fifteen other centers. Seven years ago a Roumanian lady, desiring to practice law in her own country, took the doctor's degree in Paris. A French lady obtained the same degree, and now teaches civil law in secondary schools for girls in Paris. It is stated that there are only 6 women graduates in law in France.

In Denmark, by royal decree of May 12, 1882,<sup>3</sup> women were allowed to present themselves for certain juridical examinations, but they were given to understand that they could not enter the legal profession.

In Finland, at the University of Helsingfors, there were three women following the course in law in the year 1893.<sup>4</sup>

In Sweden there are several examinations connected with the faculty of jurisprudence. The one for "candidatus juris utriusque" is the one most commonly taken. It requires five years' of hard study and has been passed by one lady.<sup>5</sup>

In Switzerland the position taken by Dr. Emily Kempin as a privat-docent in the faculty of law of the University of Zurich has been considered a great step in advance, and her request was carried to the Federal Council. Her first course of lectures, commencing March, 1892, was largely attended. In the University of Berne a young woman from Odessa carried off a prize in competition with her fellow-students of the legal faculty, and it was won by a dissertation of real merit.

In the Eastern countries a step in advance has been taken, as may be observed by the following statements:

"The first and only lady lawyer of India is Miss Sorabji, a clever Parsee. She was induced to study law by her desire to help her countrywomen, who are forbidden by religion and custom to receive legal advice from men. The young woman won academic honors in India, and afterwards went to England and studied at Oxford, where she was successful in her work and became a protégé of the late Master of Balliol. So far her desire to practice in India has not been practically realized, but although she has accepted a good post as director of women's education in Baroda she has by no means abandoned the cause to which with true Oriental fatalism she believes herself to be dedicated.

"Mme. Tel Seno, a Japanese lawyer, is said to be the only feminine member of the bar in the land of the Mikado. She was educated in America. In addition to actively following the duties of her profession, she takes a great and practical interest in the welfare of her sex, and has founded a training school for women."

#### WOMEN IN THEOLOGY.

Fewer women have entered the theological profession than either the medical or legal professions, yet "women bore an important part in the planting and early growth of the Christian Church. \* \* \* In its periods of persecution the church

<sup>1</sup> La donna e l'avvocatura, da Ferdinand Santoni de Sio, Roma, 1884.

<sup>2</sup> Essai sur la condition politique de la femme, par Louis Frank.

<sup>3</sup> La femme au point de vue du droit public, par M. Ostrogorski.

<sup>4</sup> Revue Internationale de l'Enseignement, 15 février 1896.

received no more devoted service than that given by its consecrated women. For its sake they cheerfully accepted martyrdom in its most cruel form. \* \* \* In all ages and in all lands women have given proof of a loyalty to Christianity as sincere as it was serviceable."<sup>1</sup>

To present an historical statement of woman's efforts in the work of the Christian ministry would be of interest, but sufficient data are not available for the purpose.

The entrance of women upon the work of the Christian ministry may be said to have begun with the preaching of Anne Hutchinson, who reached Boston in 1634, and there began preaching. As a result of her peculiar teachings she was banished from Massachusetts in 1637. Toward 1760 Barbara Heck gave the first impulse to Methodism in this country, and Susanna Wesley was the "real foundress of Methodism" in England; yet the Methodist Episcopal Church of America limits its recognition of women. The primitive Methodists have always employed women to reach the depraved classes.

In the United States about 50 women have been ordained in the Universalist Church, and all its schools and colleges save one are coeducational. In the year 1889 there were 35 women on its register. In the Unitarian Church there are quite a number of women preachers, some of them regular graduates from theological schools, others simply acting as helpmeets to their husbands. The Quakers regularly admit women as preachers. The Baptist clergymen freely admit women to their pulpits to speak upon great moral questions, but that church has taken no steps leading to woman's admission to the ministry. The Presbyterians, by a vote of 93 to 24, decided in 1889 that "the ordination of a woman as deacon is in harmony with the New Testament and the constitution of the apostolic church."

The Protestant Episcopal Church recognizes the value of the sisterhoods, while orthodox Congregationalists are now giving recognition to women in the theological field.

In 1893-94 there were 10 women studying for the ministry in colleges of the Congregational denomination, 6 in Baptist colleges, and 4 in a Universalist college. (For further information vide chapter on Professional Education in the Report of the Commissioner of Education for 1893-94.)

Woman does not appear in the ministry in foreign countries, but she is often allowed to take part by vote or otherwise in parochial affairs. (Vide "School legislation abroad.")

In the countries where she is allowed university privileges the theological faculties may or may not be opened to her, but study therein does not necessarily lead to the ministerial functions.

The Greek-Oriental Church, prior to 369, admitted women to the priesthood. In the Occident they became deaconesses, but in the fifth century two popes and three councils definitely forbade the holding of such position.<sup>2</sup>

In Iceland a decree of December 4, 1886, rendered the theological school of Reykjavik accessible to women, but the obtaining of a degree did not give them the privilege of preaching.<sup>2</sup>

In Finland, in 1895, a woman requested to be enrolled as a student of theology in the university at Helsingfors. This is stated to be the first woman who has applied for such study.<sup>3</sup>

In Sweden the theological faculty in the universities is not open to women.<sup>4</sup>

Other information is lacking in regard to women in the ministry, but each year brings new efforts of womankind to enter upon the professions, hence a future chapter may present more of interest on this subject.

## WOMAN AS A PROMOTIVE FORCE IN EDUCATION.

The gradual efforts toward improvement of educational conditions for women have been reviewed. The early struggles in different parts of the United States have been indicated, as woman recognized the many obstacles to be overcome ere a firm attitude toward life and life's duties could be attained. The general conditions in the older continental countries have been presented, and observation indicates that the woman movement varies in intensity in accordance with the established customs of the different countries. A general statement of women in the professions has been added, and, while much more might be gleaned from many sources, the endeavor now is to indicate woman's position as a directive force in the States and in other countries, as far as that information is at hand.

## SCHOOL LEGISLATION IN THE UNITED STATES.

As a means of understanding the attitude of the different States toward the employ of women in positions where her voice is heard in educational affairs, a careful study of the school laws has been made, so that a clear understanding may be had of what the law really allows. This statement was originally compiled, by the present essayist, for the *Woman's Journal*, of Boston, and has since been reproduced, in form of leaflet, and sent (by the editors) to the legislators of doubtful States. It has also appeared in *Woman's Work in America*, and is now revised to date of 1893. Further revision, if there be such, will appear from year to year.

The States and Territories which, according to the latest issue of their school laws, do not give women any voice in school affairs are twelve: Arkansas, Delaware, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia, Alaska, Indian Territory, New Mexico, and Utah.<sup>1</sup>

The States and Territories which confer certain privileges upon women are 36 in number. The privileges of 28 of these have been compiled from the school laws; the information in regard to the others is taken from returns<sup>2</sup> made to this office:

*Alabama*.—Women teachers are eligible for appointment on county boards, but are never appointed. (Return 1893.)

*California*.—No person shall, on account of sex, be disqualified from entering or pursuing any lawful business, vocation, or profession. Women over the age of 21 years, who are citizens of the United States and of this State, shall be eligible to all educational offices in the State, except those from which they are excluded by the Constitution. And more than this, no person shall be debarred admission to any of the collegiate departments of the university on account of sex. (School law, 1888.)

Women are eligible on district and county boards. Women can not vote for school officers, but a bill was before the legislature in February, 1893, authorizing them to do so. (Return, 1893.)<sup>3</sup>

*Colorado*.—No person shall be denied the right to vote at any school district election, or to hold any school district office on account of sex. (School law, 1887.)

*Connecticut*.—No person shall be deemed ineligible to serve as a member of any board of education, board of school visitors, school committee, or district committee, or disqualified from holding such office by reason of sex. (School law, 1888.)

*Florida*.—A widowed mother or female guardian of a child of school age may vote for district school officers. (Return 1893.)

*Illinois*.—Women are eligible to any office under the general or special school laws. (School law, 1887.)

<sup>1</sup> Since the admission of Utah as a State there have doubtless been changes, which will be chronicled later.

<sup>2</sup> From school laws of States and Territories to date of 1890, except in a few States where they have been examined to the latest date available, and from returns made to this office to date of February, 1893. (See Report of Commissioner of Education, 1891-92, vol. 2, p. 792.)

<sup>3</sup> See Report of Commissioner of Education, 1891-92, vol. 2, pp. 792-793.

*Indiana*.—Women not married nor minors, who pay taxes and are listed as parents, guardians, or heads of families, may vote at school meetings. (Decision of attorney-general.) The attorney-general questions the constitutionality of an act to authorize the election of women to school offices approved April 14, 1881. The State constitution reads, "No person shall be elected or appointed as a county officer who shall not be an elector of the county."

Women are eligible as township and city school trustees. (Return, 1893.)<sup>1</sup>

*Iowa*.—No person shall be deemed ineligible, by reason of sex, to any school office in the State. No person who may have been or shall be elected or appointed to the office of county superintendent of common schools, or school director, shall be deprived of office by reason of sex. (School law, 1888.)

*Kansas*.—Women over 21 years of age, residents of the district, are allowed to vote at district meetings. (School laws, 1885.)

Women are eligible to all school offices. Their vote affects disposition of school money. (Return, 1893.)<sup>1</sup>

*Kentucky*.—Widows qualified to pay taxes, and having children of school age, may vote at elections for district school trustees. (School law, 1886.) In 1894 the law read, "Any widow having a child 6 to 20 years of age, and any widow or spinster having a ward between the ages of 6 to 20 years, may also vote on district tax." By sufferance women have also served as county superintendents. (Return, 1893.)<sup>1</sup>

*Louisiana*.—Women over 21 years are eligible to any office of control or management under school laws of the State. (Constitution, art. 232.)

*Maine*.—Women are eligible to the office of supervisor of schools and superintending school committee. (School law, 1889.)

Women are eligible to township school offices. (Return, 1893.)<sup>1</sup>

Women are eligible to the office of superintending school committee. (School law, 1895.)

*Massachusetts*.—Women are eligible to serve on school committees and to vote at school meetings for members of school committees. (School law, 1883.)

Women are eligible to township school offices, and they may vote for township school officers—which vote affects disposition of school moneys.

Three women have been appointed on State board. (Return, 1893.)<sup>1</sup>

*Michigan*.—Women are eligible to election to district offices, to the office of school inspector, and are qualified to vote at district meetings. (School law, 1885.) They are also eligible to township school offices. (Return, 1893.)<sup>1</sup>

The public acts, 1893, read thus:

"SEC. 238. In all school, city, and village elections hereafter held in this State women who are able to read the constitution of the State of Michigan, printed in the English language, shall be allowed to vote for all school, village, and city officers, and on all questions pertaining to school, village, and city regulations on the same terms and conditions prescribed by law for male citizens. Before any woman shall be registered as a voter the board of registration shall require her to read, and she shall read in the presence of said board at least one section of the constitution of this State in the English language.

"SEC. 239. All laws of this State prescribing the qualifications of voters at school, village, and city elections therein shall apply to women, and women who are able to read the constitution of Michigan, as above provided, shall enjoy all the rights, privileges, and immunities, and be subject to all the penalties for voters at such elections.

"SEC. 240. Women who are entitled to vote under the preceding sections of this act shall be subject to all laws relating to the registration of voters and be liable to all penalties attached to the violation of such laws, and their names shall be received and registered by the various boards of registration at the time and in the manner required by law for other voters." (General school laws, 1893.)

<sup>1</sup>See Report of Commissioner of Education, 1891-92, vol. 2, pp. 792-793.

*Minnesota.*—Women of 21 and over who have resided in the United States one year and in this State for four months preceding the election may vote for school officers, or for any measure relating to schools which may come up in school district meetings. Any woman so entitled to vote may hold any office pertaining to the management of schools. (School law, 1887.)

Women may vote for county school officers. (Return, 1893.)<sup>1</sup>

*Mississippi.*—Women who are heads of families may vote for district school officers. (Return, 1893.)

*Missouri.*—Four women have been elected as county school commissioners, but it is presumed that the supreme court will decide that this is illegal. (Return, 1893.)

*Nebraska.*—Women 21 years of age, resident of the district and owners of property, or having children to educate, may vote in district meetings. (School law, 1885.)

They are also eligible as district and county officers and for city superintendent. Their vote affects disposition of school money.<sup>1</sup> (Return, 1893.)

*Nevada.*—Women are eligible to district school offices, and two hold such offices. (Return, 1893.)

*New Hampshire.*—Women may vote at school district meetings if they have resided and had a home in the district for three months next preceding such meetings. They may hold town and district school offices. (School law, 1886.)

Women are eligible to all school offices. (Return, 1893.)<sup>1</sup>

*New Jersey.*—Women over 21 years of age, resident of the State for one year and of the county for five months preceding such meeting, may vote at school meetings. They are eligible to the office of school trustee. (School law, 1887.)

They may vote for district school officers, which vote affects disposition of school money, and they are eligible to district school offices in districts organized under the general school laws. (Return, 1893.)<sup>1</sup>

By decision of supreme court women can not vote for the election of members of boards of education, but may on other occasions. (Law, 1895.)

*New York.*—No person shall be deemed to be ineligible to serve as any school officer or to vote at any school meeting by reason of sex who has the other qualifications now required by law. This permits women to act as school trustees and to vote at district meetings if residents of the district, holding taxable property, and over 21 years of age. (School law, 1887.)

The context of the consolidated school law of 1894 is more explicit. It states: Every person of full age residing in any school district and who has resided therein for a period of thirty days next preceding any annual or special meeting held therein, and a citizen of the United States, who owns or hires, or is in the possession, under a contract of purchase, of real property in such school district liable to taxation for school purposes; and every such resident of such district, who is a citizen of the United States, of 21 years of age, and is the parent of a child or children of school age, some one or more of whom shall have attended the district school in said district for a period of at least eight weeks within one year preceding such school meeting; and every such person not being the parent who shall have permanently residing with him or her a child or children of school age, some one or more of whom shall have attended the district school in said district for a period of at least eight weeks within one year preceding such school meeting; and every such resident and citizen as aforesaid who owns any personal property, assessed on the last preceding assessment roll of the town, exceeding \$50 in value, exclusive of such as is exempt from execution, and no other, shall be entitled to vote at any school meeting held in such district for all school district officers and upon all matters which may be brought before said meeting. No person shall be deemed to be ineligible to vote at any such school district meeting by reason of sex who has one or more of the other qualifications required by this section. (School law, 1894.)

<sup>1</sup>Report of Commissioner of Education, 1891-92, vol. 2, pp. 792-793.

*Ohio*.—Every woman born or naturalized in the United States, of the age of 21 years and upwards, who shall have been resident of the State one year and of the county, town, township, or other election district such time as the law provides for men preceding any election held for the purpose of choosing any school director, member of the board of education, or school council, under the general or special school laws of the State, shall be entitled to vote, and be voted for, at such election for any such officer or officers. (Amendment to school law of 1894.)

*Oregon*.—Women who are widows and have children to educate, and taxable property in the district, shall be entitled to vote at district meetings. (School law, 1887.) They are eligible to all school offices. (Return, 1893.)<sup>1</sup>

*Pennsylvania*.—Women 21 years of age and upward are eligible not only to the office of county superintendent, but to any office of control or management under the school laws of the State. (School law, 1888.) As directors or comptrollers, women vote for county, city, or borough superintendents. (Return, 1893.)<sup>1</sup>

*Rhode Island*.—Women can be elected to the office of school committee, and a woman is as eligible as a man for school superintendent. (School law, 1882.) Women are eligible to township school offices and 6 women hold positions. (Return, 1893.)

*Tennessee*.—Women of the age of 21 years, and otherwise possessing the necessary qualifications, are eligible for the position of county superintendent, and twelve hold county school offices. (School laws 1889 and 1895; return 1893.)

*Texas*.—Women seem to be allowed as city superintendents, and there appears to be no legal barrier to women serving as district trustees. (Return, 1893.)

*Vermont*.—Women have the same right to vote as men have in all school district meetings, and in the election of school commissioners in towns and cities, and the same right to hold school offices, except in cases otherwise provided. (School law, 1893.)

*Wisconsin*.—Every woman who is a citizen of this State of the age of 21 years or upward (except those excluded by section 2, article 3, of the Wisconsin constitution), who has resided within the State one year, and in the election district where she offers to vote ten days next preceding any election pertaining to school matters, shall have a right to vote at such elections. Every woman of 21 years of age and upward may be elected or appointed as director, treasurer, or clerk of a school district, director or secretary of a town board under the township system, member of a board of education in cities, or county superintendent. (School law, 1885.)

Before proceeding to quote the laws for the Territories, and those which have become States within the past few years, it may be well to state that the action taken by the constitutional conventions of the new States has, of course, superseded the former legislation enacted therein as Territories. Each of the State constitutions adopted by the voters contained important concessions in its favor, and no one of them expressly excludes women as voters. To make the matter more clear to the very latest date, it has been deemed advisable to place side by side the latest laws of State and Territory where the latter has been evolved into the former, so that steps in advance, if there be any, may be more easily observed.

*Arizona*.—The Territorial law provides that no person shall be denied the right to vote at any school district election or to hold any school district office on account of sex. (Biennial Rept., 1883-84.)

*Dakota Territory*.—In all elections held under the provisions of this act, all persons who are qualified electors under the general laws of the Territory, and all women of 21 years and over, having the necessary qualifications as to citizenship and residence required by the general laws, and who have children of school age under their care or control, are qualified voters. Women having the requisite qualifications are eligible to the office of school director, judge or clerk of election, township clerk, or county superintendent of public schools. (School law, 1887.)

<sup>1</sup> Report of Commissioner of Education, 1891-92, vol. 2, pp. 792-793.

According to the latest State laws:

(1) In South Dakota, the constitution grants women school suffrage, and provides that the first State legislature shall submit the question of full woman suffrage to the voters. The school offices are all elective offices. (Return, 1893.)

(2) In North Dakota, the constitution provides that women "may vote for all school officers and on any question pertaining to school matters, and may be eligible to any school office." [At date of going to print a woman is superintendent of public instruction.] It also provides that any legislature may extend or restrict suffrage, to take effect when ratified by the voters. (School Laws, July 1, 1893.)

*Idaho Territory*.—The right of citizens of any school district to vote at any school election, or upon any school matter, or for county superintendent, or to hold office as school trustee or county superintendent, shall not be denied or abridged on account of sex. (School law, 1885.)

In the State of Idaho the constitution grants school suffrage to women, subject to future revision by the legislature.

*Montana Territory*.—Every person, without regard to sex, over 21 years of age, resident of a school district and a taxable inhabitant, is entitled to vote at the annual school meeting for the election of trustees. All persons otherwise qualified are eligible to the office of county superintendent of common schools without regard to sex. (School law, 1887.)

In the State of Montana, the constitution provides as follows: "Upon all questions submitted to the vote of the taxpayers of the State, or any political division thereof, women who are taxpayers, and possessed of the qualifications for the right of suffrage required of men by this constitution, shall equally with men have the right to vote."

Women are eligible to district school offices. (Vide Return, 1893; also School laws, 1895.)

*Oklahoma*.—Women may vote for all school officers, and are eligible to district school offices. (Return, 1893.)

*Washington Territory*.—Women over the age of 21 years, resident of the school district for three months immediately preceding any district meeting and liable to taxation, are legal voters at any school meeting. They are also eligible to hold or be elected to any school office. (School law, 1885-86.)

In Washington State, the constitution empowers the legislature to grant school suffrage to women, and submitted full woman suffrage as a separate article along with the constitution to the voters, but it failed to receive a majority. According to the school law of 1893 (p. 34), every person, male or female, over the age of 21 years, who shall have resided in the school district for thirty days immediately preceding any school election, and in the State one year, and is otherwise, except as to sex, qualified to vote at any general election, shall be a legal voter at any school election, and no other person shall be allowed to vote. According to the answer to an inquiry, made by this office in 1893, the courts hold that women are not eligible to the office of county superintendent, but women have been elected to the office.

*Wyoming Territory*.—Every woman of the age of 21 years residing in the Territory may, at every election to be holden under the laws thereof, cast her vote, and her rights to the elective franchise and to hold office shall be the same under the election laws of the Territory as those of electors. (Revised Statutes, 1887.)

In Wyoming, the State constitution adopted by the voters grants full suffrage to women, and also, by a special article in its bill of rights, prohibits political distinctions on account of sex. This constitution was adopted by a vote of 8 to 1.

#### SCHOOL LEGISLATION ABROAD.

In foreign countries, woman's exact position in school legislation is often difficult to understand. Her connection with local government administration is often clearly stated, and incidentally her power of voting in educational and ecclesiastical

affairs is mentioned. Hence, if there seems to be divergence from the main question it is done so as to more clearly indicate woman's position in the different countries.

*Great Britain.*—The local government act of 1888 admitted women to electoral privileges in England and that of 1889 to similar privilege in Scotland.<sup>1</sup> In school boards and boards of guardians (for the administration of the poor law), unmarried women are in the position of men. Married women can sit as members of school boards, but it is a question whether they can vote in school board elections. In some parts of England the officials accept their votes, in other parts they refuse them. In county council elections women can vote (if unmarried), but they can not sit as county councillors. In vestries (a kind of small county council) it is an unsettled question whether women can sit, but they vote in the vestry elections if unmarried. Such was the custom until the parish council bill was passed in 1894. This entitles women to vote for and sit on the parish and district councils and vestries, marriage being no disqualification.<sup>2</sup> In the colonies matters have been carried still further, for the people in a township in New Zealand elected a woman mayor, and South Australia has granted woman suffrage. English women hold the place of churchwarden, are tax collectors, and registrars of births and deaths.<sup>3</sup> In 1873 the first inspectress of working establishments was appointed by the Government in England, and in 1875 a woman was appointed poor law guardian.

In six parishes of England the parishioners have the right of appointing the vicar, and both men and women take part in the election.<sup>4</sup>

Since 1869 Englishwomen possess the municipal franchise "for all purposes connected with and having reference to the right to vote in the election of councilors, auditor, and assessors."

In the spring of 1894 three women were appointed as members of the royal commission on secondary education. This is the first time that women have held such places.

The women of Ireland take no part in administrative offices, except in Belfast, where they are authorized to take part in the election of harbor commissioners, and about 5,000 of them have qualified to vote for councilors.<sup>4</sup>

"The legal status of women in England," a paper prepared by Eliza Orme, bachelor of law, University of London, for the World's Auxiliary Congress on Jurisprudence and Law Reform, Chicago, 1893, gives such valuable information in regard to the above question that the greater part of it is here incorporated:

"With regard to constitutional rights, English women hold a subordinate position, slightly improved by legislation during the last twenty-five years. The sovereign may be a woman. Peeresses, even those in their own right, can not sit or vote in the Upper House. In the House of Commons women can not sit, nor can they vote in parliamentary elections. In local government their position is better, chiefly because the acts of Parliament relating to it are modern.

"(a) In school boards and boards of guardians (for the administration of the poor law), unmarried women are in the position of men. Married women can sit as members of school boards, but it is a question whether they can vote in school-board elections. In some parts of England the officials accept their votes; in other parts they refuse them.

"(b) In county council elections women can vote (if unmarried), but they can not sit as county councillors.

"(c) In vestries (a kind of small county council), it is an unsettled question whether women can sit, but they vote in the vestry elections if unmarried.

<sup>1</sup> La femme au point de vue du droit public, par M. Ostrogorski, 1892.

<sup>2</sup> Woman's Journal, Boston, Dec. 29, 1894.

<sup>3</sup> De la condition des femmes au point de vue de l'exercice des droits publics et politiques. Étude de législation comparée, par Léon Giraud, Paris, 1891.

<sup>4</sup> Essai sur la condition politique de la femme, par Louis Frank, Paris, 1892.

"There is an agitation on foot to make women, whether married or single, on an equal footing with men in respect of all these franchises. It is supported and opposed by members of both political parties.

"With regard to personal rights, unmarried women are in the same position as men, except that under the factories and workshop acts there are certain restrictions of their labor. For instance, in most industries they are prohibited from working at night, or for more than so many hours in a week. In some cases this has resulted in the displacement of women by young men. In other cases, where it has been impossible to do without women's work, it has resulted in night work being discontinued and the hours per week reduced for the whole staff, men as well as women. Married women have not complete personal liberty, but their rights are increasing by the alteration of the law, and it is difficult, in view of recently decided cases, to give an accurate account of it at the present moment. \* \* \*

"The laws of property give unmarried women the same position as men. Married women before 1870 were unprotected from their husbands except by the courts of equity, which upheld settlements made in their favor; and in other ways assisted them when property came to them by will or otherwise. Since 1870 various acts of Parliament have been passed giving married women the right to contract, to convey property, to retain their own earnings, and in many other ways to occupy the position of independent owners of property. Wealthy persons continue to protect their female relatives with settlements as before, while the poorer classes derive but little benefit from the change of law. \* \* \*

"With regard to employment, women are handicapped in England more by custom than by law. Except for the factory acts I have mentioned, industrial pursuits are freely open to them. They are employed by the Government in the post-office, and occasionally in prisons and other public institutions. They are largely employed as clerks, and no legal disqualification exists in occupations of this class. The professions are not open to them except in the case of medicine. The profession of law is in two branches with us. Persons practicing in the higher law courts are barristers, and those who prepare documents, advise clients, and conduct business in less important cases in police courts, etc., are solicitors. To enable women to become barristers they must be allowed to enter the terms of court as students, and this depends entirely on the will of the leading members of the profession. To enable them to become solicitors an act of Parliament would be necessary. Two women have been for some years practicing conveyancing, but without legal qualification. They have drawn up wills and simple agreements, which under the English law may be prepared by persons not qualified as barristers or solicitors. Other conveyancing, such as drafting deeds, they have done for qualified practitioners who have used the work in accordance with the maxim '*qui facit per alium, facit per se.*'

"I am not aware of any other important heads under which the status of English women is peculiar."<sup>1</sup>

*France.*—In the Middle Ages, women of the nobility were not excluded from political power; in the States-General (*États généraux*) women took part in electoral reunions; during the Reign of Terror they claimed that as they had the right to mount the scaffold, they ought equally to mount "*à la tribune.*" Discussions followed at different dates in regard to their paying taxes if they were not allowed a voice concerning their own property. In 1793, in matters of local self-government, it was decided that "*tout individu de tout sexe ayant droit au partage et agé de 21 ans aura droit de voter.*" Women<sup>2</sup> in France are allowed to occupy the position of postmaster, prison inspector, teacher, director of infant and normal schools. As a normal school director woman may take part in the election of members of the council in charge of elementary education and women are members of the provincial

<sup>1</sup> Reproduced from *Woman's Journal*, October 7, 1893.

<sup>2</sup> *Essai sur la condition politique de la femme*, par Louis Frank.

councils. Possessing the power of the "electorat,"<sup>1</sup> she is not ineligible to a seat in the higher council (*conseil supérieur*), which has administrative and consultative powers, and for several years a woman has been member of that council. As is stated by M. Paul Janet, in *L'éducation des femmes*, the construction of the edifice has only just commenced. Experience alone will indicate the outcome of the instruction given. All progress has been attained by struggling against prejudice. In the Middle Ages the cultivation of the sciences was first considered to be sorcery; learning was only supposed to be for the priests; at each step there was opposition—a struggle—but at last victory. So will it be in regard to the education of women. The freedom of choice is hers; knowledge is necessarily acquired without regard to sex; freedom of action and thought is the foundation of dignity and morality.<sup>2</sup>

In *Denmark* women are excluded from taking part in the affairs of local government, but in *Iceland*, its dependency, with its 75,000 inhabitants, widows and spinsters of property are privileged to vote in all church and parish matters, and they hold an especially independent position. Iceland has an independent legislative assembly, the "Althing," whose decisions are to be sanctioned by the King of Denmark.<sup>1</sup>

In 1895 a bill passed both houses of the "Althing" making women eligible to election on county and city boards. The signature of the King of Denmark is required to make this a law. Whether he has sanctioned this is not known at date of going to press.<sup>3</sup>

For its own local affairs Iceland is divided into twenty-two districts (*sysler*), which are again divided into communes (*krapper*). The magistracy in these districts are appointed by the electors. According to a law of May 12, 1882, women have the right to take part in these elections as well as in the reunions of parishioners for the deciding of ecclesiastical affairs.

In *Norway* women have no part in local government, except in school administration, since 1889. In cities they are eligible to positions on school committees, and those who have children can vote for the election of inspectors. In rural communities woman's privileges are even greater; each district has an assembly which votes for school funds, decides other school affairs, and appoints inspectors. Women and men who pay school taxes take part in these assemblies. Fathers and mothers aid in deciding questions which do not appertain to expenditures, even if they do not contribute to the school funds. Women are also eligible to the position of inspector.<sup>1</sup>

In *Sweden* unmarried women take part in the rural assembly meetings where there is no communal council, and vote at the elections which precede the formation of the councils. Women are eligible to positions on municipal committees for aiding the poor, and also as members of the school board at Stockholm and elsewhere. In 1884 a commission was appointed to examine into the needs of higher education for women, and two women were appointed on the commission. Women occupy positions as teachers, lady principals of schools, members of school boards, and as inspectors; in fact, if property holders, they are allowed many privileges in the community, in trades as well as in school affairs.

Since 1883 they have been allowed to take part in the nomination of pastors; since 1889 they have been eligible to membership in "the administrative council for public elementary instruction"; since 1861 they have had the right to serve as organists in Lutheran churches.<sup>4</sup>

In *Finland* women have been authorized to act as members of school committees since 1869, and as active members of committees on public charities since 1889. As far as administrative questions are concerned, there is political equality of the sexes; unmarried women have the same rights as men in parochial assemblies, in so far as

<sup>1</sup> La femme au point de vue du droit public, par M. Ostrogorski.

<sup>2</sup> In *Revue des Deux Mondes*, September, 1883.

<sup>3</sup> *Woman's Journal*, March 21, 1896.

<sup>4</sup> *Öfversigt af den Svenska kvinnans Sociala Ställning*, and *Essai sur la condition politique de la femme*, par Louis Frank.

the regulation of ecclesiastical matters and the nomination of the Lutheran pastors are concerned. They may also vote in general assembly (*radhusstanma*) in proportion to the amount of their taxes for municipal expenditures, but they are not eligible for the position of municipal councilor.<sup>1</sup>

In *Russia* the women of rural communities seem to have the rights of a "feme sole," to use the Anglo-Norman term; in Germanic countries<sup>2</sup> she is admitted, by proxy generally, to a vote in local matters where, as a property owner, she has interests, but how far this extends to school legislation is not clear.

In *Bohemia* women are admitted into the councils of the committees having charge of the poor of the city or town. In different subdivisions of Germany, Switzerland, and Austria the electoral privileges accorded to property holders of the two sexes vary, and, as the educational side does not distinctly appear, the laws will not be cited. In the Latin countries woman is invariably excluded from participation in the administration of communal affairs. In Italy,<sup>1</sup> however, she is connected with the administration of infant schools and, since July 17, 1890, with the administration of public charities.

Investigation of the constitutions of the Central and South American countries would seem to indicate that women are not excluded from the exercise of political rights, and yet, with perhaps an exception in favor of Ecuador and Chile, it is not apparent that they make use of such privileges.

#### MARRIAGE RATE OF COLLEGE-BRED WOMEN.

The after life of the woman graduate from college is of interest to many, and several articles have appeared on this subject. Statistics of the marriage rate of women from coeducational and women's colleges, by section and by country and at different dates, have appeared in several magazines.<sup>3</sup> A few of the main facts are here presented. Generally speaking, the college women marry rather late, and the rate of marriage is lower in the New England and Middle States than in the West. The percentage of marriages among the graduates of coeducational and women's colleges was presented as follows in the *Overland Monthly* in 1890:

|  | Per cent. |
|--|-----------|
| New England coeducational colleges .....             | 24.7      |
| New England women's colleges .....                   | 14.8      |
| New York coeducational colleges, last 12 years ..... | 25.7      |
| New York women's colleges, last 12 years .....       | 20.6      |
| All coeducational colleges .....                     | 34.8      |
| All women's colleges .....                           | 22.9      |
| Western coeducational colleges .....                 | 34.6      |

The comparative probability of marriage in the case of a coeducationally as against a separately college-bred girl would appear to be nearly as 5 to 3 in New England; in New York, as 5 to 4; on an average, as 3 to 2. There are no women's colleges in the West to form a basis of comparison. The marriage rate of women, as represented by age, has been compiled by different persons, but neither by age nor section can absolutely accurate statements be presented. The conditions vary greatly from year to year; rates of marriage in different sections may increase or decrease within a few years' period, and the question of marriage rate according to age is also mutable.

"Under 25 years old," writes Millicent W. Shinn in the *Century*, in 1895, "college women rarely marry; of 277 graduates of the latest three classes but 10 are married. If these youngest classes are left out of account, so that we consider only women who have passed 25, we find 32.7 per cent married; after the age of 30 is passed,

<sup>1</sup> *Essai sur la condition politique de la femme*, par Louis Frank.

<sup>2</sup> *La femme au point de vue du droit public*, par M. Ostrogorski.

<sup>3</sup> *Overland Monthly*, April, 1890, pp. 443-445; *Century Magazine*, 1895 (article by Millicent W. Shinn); *Nineteenth Century*, June 1, 1895, pp. 955-960.

43.7; after 35 the rate becomes 49.7, while of those who have passed 40 years 54.5 per cent are married. The census tables do not fix exactly the general marriage rate for women of this age, but it is not far from 90 per cent.

"The ultimate probability of a college woman's marriage, therefore, seems to be below 55 per cent, against 90 per cent for other women—not quite two-thirds as great. The college woman marries later. The most rapid increase in the rate, in the figures just given for college women, is between the ages of 25 and 30, showing marriage most frequent at this period; while for women in general it is more frequent between 20 and 25. The census shows 9.7 per cent of all girls between 15 and 20 married—an age at which virtually no college women ever marry."

This subject is now under discussion and research by members of the collegiate *alumnæ*, and hence a more epitome is here presented. In future chapters it is intended to deal more fully with the question, if statements of additional value can be obtained.

In regard to the marriage rate in England, an article by Mrs. J. E. H. Gordon, on "The after careers of university-educated women," in the *Nineteenth Century*, gives explicit details. She says that the total number of students who left Newnham College from October, 1871, to June, 1893, was 720. Leaving out 16 who have died and 37 foreigners who have gone back to their own countries, we find that 374 are at the present time engaged in teaching as a profession. Forty-seven have married, including 9 or 10 of the lecturers and teachers. \* \* \*

"At Girton the number of students who had been in residence since the foundation of the college up to the time when the report was published, in June, 1893, was 467. Of these, 75 had not yet completed their course of training; but of the 335 who obtained degree certificates, 123 engaged in teaching, 45 were married, 2 were missionaries, 6 were in Government employment, 4 were engaged in medical work, and 6 were dead.

"Judging from the reports issued by these two Cambridge colleges, the larger proportion of university-educated women do not seem to make marriage their career in life. Of the ex-students of Newnham only 120 out of 720 have married, and at Girton 45 out of 335. \* \* \*

"Of the 79 students who have obtained the certificate for the mathematical tripos, 6 have married; of the 97 who passed the classical tripos, 10 have married; of the 47 who passed the natural-science tripos, 7 have married. The only student who passed the theological tripos has married. Out of the 30 who passed the historical tripos, 4 have married. Of the 21 who passed the moral-science tripos, 3 have married. But of the 40 lady students who have taken the ordinary pass degree, 15 have married, a much larger proportion, as will be seen, than among the students who have obtained the honors-degree certificate.

"From the Newnham College report I have not been able to ascertain the percentages of marriages among the ex-students who have taken merely the ordinary degree; but an examination of the tripos lists gives very much the same results as those of Girton—namely, out of 85 who have passed the mathematical tripos, 5 have married; of the 65 in the classical tripos, 8 married; of the 74 in the natural-science tripos, 10 married; of the 64 in the historical tripos, 9 married; and of the 38 in the mediæval and modern language tripos, 1 married. The only student who passed the law tripos has not yet married.

"It appears, therefore, that about 1 in 10 of those who take honors at Girton marries, as against 1 in 9 who take honors at Newnham; while about 2 in 5 marry of those who take an ordinary degree at Girton. Leaving out theology and law, as to which the data are insufficient, the order of precedence (matrimonially) of the various studies is as follows: At Girton, elementary studies, natural science, moral science, history, classics, mathematics, and, last of all, mediæval and modern languages. At Newnham, moral science, history, natural science, classics, mathematics, and again last, mediæval and modern languages. \* \* \*

"Turning to the reports furnished for our information by the women's colleges at Oxford, we find that of the 173 students who left Somerville College between the years 1879 and 1892, 73 are engaged in teaching, 29 are married, and 1 is an assistant librarian of the Royal Society.

"\* \* \* The report printed by the principal of Lady Margaret's Hall gives fewer statistics, but one gathers that the larger proportion of the ex-students now at work are engaged in teaching. The number of students in residence at Lady Margaret's Hall averages 38. Holloway College has only been at work for seven years, and there has not been time for much development in the after careers of students; but of the 197 who have left, 7 are married, about 69 are teaching or preparing to teach, 2 are nurses, 2 are studying at the School of Medicine for Women, and about 47 are residing at home."

From Victoria College, Belfast, Mrs. Byers sends the following particulars: "In addition to over 1,500 students of Victoria College, certificated by the Queen's University, Ireland; Trinity College, Dublin; Cambridge, Edinburgh, and London universities; the College of Preceptors, London, and the Intermediate Education Board, Ireland, there are 51 graduates of the Royal University, Ireland. These include graduates in arts and medicine. Eight former Victorians are at present medical undergraduates, with a view to becoming medical missionaries.

"Many have become wives of missionaries, and 16 unmarried ladies, former Victorians, are at present engaged in zenana medical and educational work among the women of Syria, India, and China. Twenty-one former students are now principals of flourishing middle-class schools in Ireland, in most cases of schools founded by themselves, while a large number who were engaged as private or other teachers have since married.

"Twelve are at present head mistresses or assistant mistresses in high schools and other middle-class schools in England and the colonies. \* \* \*

"Alexandra College, Dublin, is a large day school where girls come up to study painting, music, and various other subjects that are not taught at Newnham; but of the 61 ex-students of the college who have taken the University of Ireland B. A. degree from the college, and who would therefore be of the same standing as those who have left Newnham and Girton, 41 are engaged in teaching, 6 have married, 1 is a medical doctor, 1 is assistant to Sir C. Cameron, city analyst, and the remaining 11 are apparently living at home.

"The total number of ex-students from Girton, Newnham, Somerville Hall, Holloway College, and Alexandra College, whose after careers we have mentioned above, amounts to 1,486; of these, 680 are engaged in teaching, 208 have married, 11 are doctors or preparing to be doctors and medical missionaries, 2 are nurses, 8 or 9 are in Government employment, 1 is a bookbinder, 1 is a market gardener, and 1 is a lawyer. \* \* \*

"The percentage of marriage among less highly educated women is greater than among university-trained maidens."

## CHAPTER XIX.

### CHAUTAUQUA; A SOCIAL AND EDUCATIONAL STUDY.

BY HERBERT B. ADAMS, *Johns Hopkins University.*

Chautauqua is, first, an institution of learning, and as such has relationships to other sister institutions of learning. Chautauqua does not attempt to cover the field of secondary instruction in America. That is provided for by our common-school system. Chautauqua does not attempt to take the place of the higher institutions of learning. That field is also occupied. But Chautauqua endeavors to bring these fields together. Chautauqua has relationships with both, and is unique in its effort to do for the higher and for the lower a work which had not been undertaken before. And, indeed, in twenty years of its history, who does not see the magnificent work in this direction which has been accomplished? But more; Chautauqua is a sociological movement, and I wonder if yet we know or understand the philosophy of this movement that has swept over this country and over other countries, a movement that is in active operation in every State, a movement the beneficent influences of which have been felt by thousands. (President William R. Harper, University of Chicago, at Chautauqua's twenty-first anniversary, August 7, 1894.)

## PART I.—SOCIAL.

Von Holst, the historian, advising a German official what to see on his way home from Chicago and the World's Fair, said: "Go to Niagara and see the grandest thing in nature; then, if you want to see one of the most interesting things in the United States, turn the corner and go to Chautauqua."

This university of the people derives its name from Lake Chautauqua, so called by the Indians from its peculiar narrows. It lies in the southwestern corner of the State of New York and is 85 miles from Niagara Falls. It requires three hours by train on the Western New York and Pennsylvania Railroad to turn the corner to this beautiful upland lake among the hills. It is 20 miles long and from one-half to 2 miles wide. It lies 700 feet higher than Lake Erie, which is seen by the traveler nearly all the way down the Lake Shore from Buffalo, and is especially lovely as you climb the Chautauqua County hills from the Brocton vineyards, where Thomas Lake Harris and Laurence Oliphant tried their unfortunate experiment in Christian socialism.

Chautauqua may be reached in various ways: From Buffalo via Brocton and Mayville (at the head of the lake), either by the Western New York and Pennsylvania Railroad or by the Lake Shore parallel route. The Erie system touches at Jamestown and Lakewood, which latter is only 12 miles by steamer from Chautauqua. Thus from the East one can come by way of the Erie or New York Central or West Shore (via Buffalo); from the West by the Michigan, Erie, Lake Shore, or Nickel Plate; from Pittsburg by the Western New York and Pennsylvania, connecting at Corry, Pa., with the Pennsylvania system from Baltimore and Washington. The Chautauqua Lake Railway connects Chautauqua with Mayville and the most interesting stations around the lake as far as Jamestown. Visitors should remember that Chautauqua, N. Y., is a definite place on the lake and on the map. That address is sufficient for railroad, postal, telegraphic, and express purposes, and should not be confused with "Point Chautauqua" or "Chautauqua Lake" or "Lakewood."

Decidedly the best approach to Chautauqua is by steamer from Mayville, Lakewood, or Jamestown. There is a freight and passenger railway terminus near the grounds for certain trains from Mayville, but the boat connections are better, and the lake trip is pleasanter. Coming across from Point Chautauqua or up the lake, one finds "Chautauqua" itself a beautiful and extensive sylvan town of 500 cottages, with some conspicuous buildings, such as the Pier House and the Hotel Athenæum. At the Pier the visitor must purchase a ticket of admission to the grounds for a day, week, or month, according to the length of his proposed stay. Short-time tickets can easily be exchanged or extended if one desires to prolong his visit.

Entering the grounds through the Pier gate, where one's ticket is

punched by the keeper, the visitor finds himself upon a pleasant, well-wooded peninsula, which was originally known as "Fair Point." The charming situation, with its fine views over the lake and its breezy air, first caused this projecting point of land to be chosen for a camp meeting. Doubtless much the same motives which impel hunters and fishermen to this day on Lake Chautauqua to select breezy points of outlook for their tents influenced the first fishers of men who settled on Fair Point. It is still wonderfully pleasant, cool, healthy, and free from flies and mosquitoes.

#### THE CHAUTAUQUA ASSEMBLY.

The institutional and legal basis of Chautauqua is the so-called Chautauqua Assembly. This is a corporation of property owners who intrust their interests to a board of 24 trustees, who are elected by the landed proprietors and cottagers of Chautauqua, and who have power to fill vacancies by cooptation when a quorum of electors is not present. Meetings of the cottagers and lot owners are actually held, and if there is no quorum their provisional elections are ratified by the trustees in power. The corporation is not a joint stock company for the purpose of securing dividends or booming real estate. "By the provisions of the charter, all surplus funds must be used for the improvement and extension of the Assembly's work." (Hand Book of the Chautauqua Assembly, 1893, p. 3.)

How revenue is raised and profits are expended will be described under the heads of "Finances" and "Public improvements." The philanthropic and educational characteristics of Chautauqua are its saving qualities. The two founders of this Christian commonwealth, Chancellor John M. Vincent and President Lewis A. Miller, have never received compensation for their services. Of course, the practical managers and employees of the Assembly are reasonably paid, and so are the teachers, lecturers, and entire educational staff. Contracts are usually made out in the name of the Chautauqua Assembly by authority of the president and chancellor. The business office of the Assembly, during the season, is on the premises, and several men are constantly employed in attending to the bookkeeping and money affairs of Chautauqua. The banking is done at Mayville, on the lake. No secret is made of the financial side of Chautauqua. The annual report made to the trustees by the secretary and superintendent of the grounds is printed in newspapers like the Jamestown Journal and in pamphlet form. Copies are given at the treasurer's office to anyone who applies.

#### ASSEMBLY TICKETS.

Everybody who pays the citizen tax for one or more days receives a Chautauqua Assembly ticket for the time of his sojourn. Instructors get a free pass. This ticket or pass is punched on one side by the gate keeper when the visitor enters the grounds and on the other side when

he goes out with the intention of returning, provided his ticket has not expired. A visitor may go in and out as often as he likes, but he must go through the regular gates and not climb over the fence; otherwise he might lose the proper balance of entries and exits recorded on his card. The officials are not disposed to be fussy with persons well known to them, and will occasionally pass a lady who has forgotten her ticket. One summer the writer accidentally got in without showing his pass and managed to ride out and in on horseback almost every day without having his ticket punched. He even went to numerous ball games outside the grounds and returned without serious challenge, thus preserving a perfectly clean score for the whole season. But the gate keepers understand their business and do their duty whenever it needs to be done.

#### PUBLIC IMPROVEMENTS.

An old Chautauquan, returning in 1894 after an interval of two years, I was astonished at the improvements manifest in the forest village. I noticed that many objects once unsightly had been cleared away. Well-kept lawns and grass plots, more open spaces, and flower beds now attract the eye. A fine system of cement walks extends from the pier to the hotel, amphitheater, post office, and hall of philosophy. The streets are better graded and provided with gutters of brick or cement. Some of the street crossings are paved with brick. The grounds and buildings are lighted by electricity. A new power house has been built, containing a new engine and new pumps. Better drainage has been secured for the cottages, and better sanitary arrangements in general.

Upon inquiry of the superintendent of the grounds, Dr. W. A. Duncan, I learned that over \$89,000 worth of permanent improvements had been made in the year 1893. I found that the grounds had been considerably enlarged by what is called the new south addition, including the ball ground, costing altogether over \$4,000. All these improvements were made in a year of commercial panic and of great financial stringency. They indicate great confidence on the part of the trustees of Chautauqua, and convince the beholder that here is a remarkably successful plant, with every prospect of continued growth and usefulness. When we reflect that all profits of this summer school are to be put into further public improvements, our interest in the work is redoubled.

#### THE HOTEL ATHENÆUM.

To one landing by boat at Chautauqua perhaps the most attractive building is the Athenæum. This is a large hotel with a lofty tower and an imposing front piazza. The building stands on a grassy slope and commands one of the best general views of the lake and grounds. The Athenæum was built at a cost of \$125,000 by a joint stock company,

and one of the original investors presented one-fourth of the hotel stock to the Assembly. The hotel is conducted in the interest of Chautauqua and is an important auxiliary; it is not, however, regarded as a profitable investment. The rates are not low, but are reasonable considering the shortness of the season and the privileges enjoyed.

The Athenæum is the social center of Chautauqua. Here special and official receptions are held from the beginning to the end of the session. Here faculties and conventions meet. Here the officers, professors, and lecturers of Chautauqua are to be found. The Athenæum parlors and piazzas are a general rendezvous and a social exchange for the guests of the hotel and the best personal elements that constitute Chautauqua society. Nice families come year after year to this hotel, and occupy repeatedly the same rooms and the same tables. Bishop Vincent and his family take their meals at the Athenæum. Dr. W. R. Harper, principal of the Chautauqua system, as well as president of the University of Chicago, always gathers the professors and lecturers around one social board. Passing through Chautauqua is a continual succession of interesting people—public men, well-known writers, clergymen, and educators. Most of them stop at the Athenæum.

The office of the omnipresent secretary and superintendent of the grounds is at the hotel, and so is the general office of the Chautauqua Assembly. To this general office there daily pours a constant stream of Chautauquans who come on business matters relating to rent, cottages, lots, water rates, sewer connections, sanitation, wood, stoves, ice, and anything affecting the comfort of small proprietors or tenants. The Hotel Athenæum is thus the business as well as the social center of Chautauqua; and yet business never seems to interfere with pleasure. There is a place for both. Business is confined to corner rooms near the main entrance on the ground floor, and all the rest of the house, with its great hall and parlors, its long corridors and upper and lower piazzas, are at the service of guests.

There is a beautiful lawn sloping from the Athenæum front to the water's edge, a lawn with flower beds and great trees overgrown with creepers, and beyond lies the lovely, ever-changing lake; beyond that are peaceful blue hills and upland pastures. Dr. Richard G. Moulton, the English university extension lecturer, now permanently attached to Chicago and Chautauqua, says its lake scenery rivals that of Scotland. He and the present writer lived for a month in rooms looking out morning, afternoon, and evening upon the same delightful views of lake and shore and sky. So charming, so free, so cool and quiet was the place that I tarried for seven days after the completion of my three weeks' engagement at the college, in order to study Chautauqua and let my impressions deepen. Moreover, I wanted, in my own mind, to contrast sharply the social life of Chautauqua with that of certain Canadian monasteries which I was about to visit. The way is not long in the summer season from a modern hotel to a mediæval

hospice, or from a university club to a community of monks! These institutions are historic kinsmen.

#### NEW AMPHITHEATER.

The new amphitheater was completed at a cost of \$26,478 in the early summer of 1893, in time for assembly use. This solidly built but airy structure occupies the site of the old amphitheater, and is of the same width, but extends 13 feet farther down the ravine toward the lake and 30 feet farther up the hill. The new building is 174 feet long and 168 feet wide. Like a Greek theater, it is built in semicircular form into the side of a hill, but, unlike a Greek theater, it has a good roof—a very necessary thing in our climate. The roof is curved in the form of a turtle's back, is 34 feet above the pit of the amphitheater, and is supported by trusses requiring only four rows of iron columns, which are so arranged on outer and inner half circles as to give a clear span of 100 feet in the center of the amphitheater. The rows of seats, with wood flooring, rise gradually from the pit, so that the outer circle is on a level with the top of the hill into which the horseshoe structure is built. A person standing anywhere upon the sidewalk, along the outer edge of the amphitheater, can take in at one glance the whole interior scene or arrangement.

There below is the speaker's platform projecting far out into the pit. Behind the platform and 9 feet higher up is the singers' gallery, accommodating 400, rising tier on tier, even higher than the ceiling of the amphitheater and having clearstory windows on either side for overhead light. The entrances into the amphitheater are various, but chiefly by aisles roughly concreted and radiating from the pit, like spokes from a hub. The singers' gallery is accessible from both sides through gates and also from offices below the stage, whence singers and lecturers emerge with the director or manager. The amphitheater is lighted by electricity. The effect of the fringe or festoon of incandescent lights around the outer circle is very pleasing at night, but not so beautiful as is the light of day shining into that great amphitheater over the heads of 6,000 people. This open-air effect is heightened by the sight of a border of green trees just beyond the outer rim of seats. These trees wave and rustle with every breeze and afford a beautiful accompaniment to the exercises inside the building.

It is generally agreed among visitors that Chautauqua has no finer sight than her Sunday morning service in the amphitheater. There is something very uplifting in the grand chorus of voices always singing at the opening of the exercises:

Early in the morning  
Our song shall rise to Thee.

There is a certain form of responsive readings accompanying every morning service, and when conducted by Bishop Vincent it is particularly impressive. Prof. J. P. Mahaffy, of Trinity College, Dublin, thus

speaks of Dr. Vincent and "the great Sunday morning service," which the professor himself attended: "Though the majority—the great majority—were what we call Dissenters, whose devotions have a somewhat different type from those of the Church of England, he [Bishop Vincent] had so ordered his liturgy that every word of it was not only in harmony with his own kindred branches of the Christian Church, but with mine and with those of every reasonable Episcopalian. I can honestly say it was the most impressive service I ever attended." The late Professor Freeman would have called it a religious folk-mote.

There is great catholicity shown at Chautauqua in the choice of Sunday preachers. Phillips Brooks used gladly to accept invitations to preach there, and last summer Bishop Coxe was among the succession of Protestant clergymen—Methodists, Baptists, Congregationalists, and Presbyterians—who appeared upon the Chautauqua platform. Such liberals as Dr. Lyman Abbott and Dr. Edward Everett Hale are much liked by Chautauqua congregations, which are at once orthodox and enlightened. Religion is a very vital and very fundamental element in the educational work at Chautauqua. Any passing visitor will quickly perceive that moral and religious forces are the foundation and stay of the whole complex of institutions.

The song service at 7.30 Sunday nights is much enjoyed by the people, but on week days the amphitheater is used for a great variety of purposes. There are often religious or musical exercises in the morning hours; an educational lecture at 11 o'clock; a popular address at 2.30 p. m., and a concert, a dramatic reading, or a stereopticon exhibition in the evening. Almost everybody goes to the amphitheater at some hour of the day, according as one has leisure or inclination, but the largest audiences are usually at night, when people are free and disposed to be entertained by music or illustrated lectures.

It is no easy task to hold an amphitheater audience. Chautauquans are so accustomed to good speakers and to things really interesting or edifying that a dull lecturer will find his audience quietly stealing away from him. Popular taste is generally correct as to what is worth hearing or seeing. Unprofitable reformers, demagogues, and bores are quickly found out by the people, to the great advantage of the management, which never engages manifest failures for a second season.

In the opinion of experts, the amphitheater is an easy one to speak in. Dr. Edward Everett Hale is said to be a great admirer of the acoustic properties of the new building. A speaker with a clear, distinct voice is easily heard throughout the vast interior space, even when he talks in a perfectly natural way, without any striving for oratorical effect. Dr. Hale ascribes the acoustic excellence of the amphitheater partly to its having no extended system of floors. He says: "Mother Earth is a better sound reflector than boards." But there is enough flooring for all practical and æsthetic purposes. The whole construction of the new amphitheater was designed for good acoustic effects.

## THE CHAUTAUQUA SALUTE.

There is a singularly striking custom which one sees at rare intervals in the great amphitheater. When the presiding officer wishes to show special honor to some distinguished lecturer or visitor from across the sea, he proposes to the audience to give the honored guest upon the platform the "Chautauqua salute." Immediately a thousand white handkerchiefs are waved in the air, and the vast interior slope of the amphitheater seems all alive with color and motion. The effect is picturesque and pleasing in the extreme. It appeals only to the eye, and yet it surpasses every kind of noisy applause.

The natural origin of this graceful custom is very interesting. Chancellor Vincent thus explains it: In the early days of the assembly, when the meetings were held in the auditorium in Miller Park, Professor Green, a deaf-mute, of Bellevue, Ontario, was giving a pantomimic lecture one afternoon, in which he portrayed incidents in the life of Christ. The audience applauded vigorously. Chancellor Vincent, realizing that Professor Green, being deaf, could not hear the applause, suggested the waving of the handkerchief, which was done with great enthusiasm. For the first time Chautauquans beheld the effect which they have seen so often since, which resembles the blooming of thousands of white lilies. This salute is not only given at the various local Chautauquas, but at gatherings which have no connection with Chautauqua, and is known everywhere as the "Chautauqua salute."

## CHAUTAUQUA NONSECTARIAN.

Chautauqua is not denominational. It is not under the control of the Methodist Church, or of any one religious body; but Chautauqua is profoundly religious. Eliminate that element, and its present earnestness would be gone. Chautauqua "is thoroughly nonsectarian, and members of all churches meet there on a common level of mutual respect and esteem. Religious differences are not emphasized by public discussions, but are for the most part ignored. Every Sunday the sermon is preached by a man well known in his own church, and thus in a single summer a half dozen different denominations are represented. \* \* \* Prof. J. P. Mahaffy, of Dublin, when he visited the assembly, said he expected to see 'an ecclesiastical bear garden, but found instead a happy family.'"

## RELIGIOUS CLUBHOUSES.

Thomas Jefferson first conceived the excellent idea of surrounding a nonsectarian university with different theological seminaries, each supported by its own constituency and all profiting by friendly relations to the central institution. Something of this relation appears in the religious and social life of Chautauqua. Some of the leading denominations have erected church clubhouses, containing attractive recep-

tion and reading rooms, with various church papers and other periodicals which clergymen and laymen often wish to consult. Here are quiet rooms where one can write letters or meet friends. Receptions, reunions, and religious meetings are held in the comfortable parlors of these clubhouses, which are nicely furnished and are a source of pardonable pride to the different denominational subscribers or founders who erected them. All day long you will see people sitting on their club piazzas, amid flowering plants, and evidently rejoicing under their own vines and fig trees, as did people at the World's Fair in their own State buildings, or as do college boys upon the front porches of their fraternity houses. There is a commendable comity and generosity shown in the social and public use of these different denominational buildings, which are called by such names as "Presbyterian House," "Methodist Episcopal House," "Congregational House," etc. Conventions of teachers and specialists of one sort or another are allowed to hold meetings and conferences in the parlors of these modern religious houses, which afford in some respects a striking contrast to mediæval monasteries and to the old-time exclusiveness of church assembly rooms.

#### CATHOLIC SERVICES.

In the summer of 1895 a new feature was added to the religious life at Chautauqua. For a long time a real need and actual demand had existed for the occasional services of a Catholic priest. Some of the students were Catholics. In Chautauqua households Catholic domestics have long been employed. Various religious denominations have been encouraged to establish their own places of social worship at Chautauqua, and there was no good reason for excluding Catholics, who have long been appreciative students of the Chautauqua system. Priests have occasionally visited the place, and have always found a welcome.

Bishop Vincent invited the Catholic bishop at Buffalo to send a priest to Chautauqua to conduct services regularly once a week. This was done, and at each service a number of Protestants were present. Indeed, there was nothing in the character of the services that could possibly have offended any reverent Christian. But it was certainly a surprising evidence of the growing catholicity of Chautauqua to find in the *Assembly Herald* for Monday, August 5, 1895, the following item:

"At 8 o'clock yesterday morning in College Hall about 50 persons assembled in attendance upon the first Catholic Church service held at Chautauqua. Low mass was celebrated, the service being conducted by the Rev. Father E. Gibbons, of Buffalo, N. Y. Among those present were several Protestants. Mass will be celebrated every Sunday morning during the season at the same hour."

College Hall has been used on week-day mornings for chapel exercises preliminary to the college class work, which begins at 8 o'clock.

Ministers, professors, and other laymen of various Protestant denominations and different shades of belief have officiated on these occasions. Chautauquans have thus become accustomed to enlightened views of religious worship and of all spiritual gifts. "For the body is not one member, but many," said St. Paul. "Are all apostles? Are all prophets? Are all teachers?" (I Cor., xii, 14, 29.) It is a manifest tendency of our time to give students the benefit of lay preaching as well as clerical, and to employ college preachers of different denominations. Harvard, Cornell, and Chicago universities are conspicuous examples. But Chautauqua has excelled them all in true catholicity, for it has begun to bring Catholicism and Protestantism together upon common educational ground, where they must finally meet, whether in school or university, and endeavor to agree in the spirit of St. Augustine, who sought, "In essentials, unity; in nonessentials, liberty; in all things, charity."

The time may come when there will be a Catholic building at Chautauqua; but if there should be, it would probably be so broadly catholic in character that any Protestant denomination could go inside and, if desirable, hold a service. Already at Chautauqua there is the Chapel of the Good Shepherd, owned by Episcopalians, which has never been formally consecrated or set apart for a specific mode of religious worship. The building may be used for educational or social purposes, or for religious services conducted according to other forms than the Episcopal. A historical student is reminded of those good old times when English churches were used for town and parish meetings, and when Italian cathedrals were employed for public lectures and addresses. In the old university town of Heidelberg, Germany, there is a beautiful Gothic church, which has been divided by a partition across the nave. On one side Protestants worship; on the other side Catholics. But the grand old church is one and the same church in spite of its partitions.

#### HOW CHAUTAUQUANS LIVE.

The majority of Chautauquans board in the cottages, some of which are large and capable of accommodating many guests. The cost of living in a cottage is from \$5 to \$10 a week. At the Athenæum, the only hotel, the cost is from \$12 to \$25 a week. Many people rent cottages according to their means, and live in privacy and comfort. There are various gradations in the Chautauqua mode of life, from the primitive tent and light housekeeping up to a well-ordered summer house with family servants. Tents are now very rare, and are, indeed, rather distinguished by their rarity.

The territorial domain of Chautauqua comprises over 200 acres. The northern portion is divided by numerous "avenues" into blocks of varying size, containing each a number of cottage lots. Upon more than 500 of these lots cottages have actually been built, and many lots have

been selected for building purposes. The usual size of a lot is 40 to 50 feet front. The prices range from \$150 to \$500. It is not unusual for purchasers to take two adjoining lots and build in the center.

Lots are not actually sold, but are leased for ninety-nine years. Tenants agree to conform to the by-laws of the assembly, to submit all buildings for approval by local authority, to use the property for private and not for business purposes, and not to sublet or transfer or lease land or cut down trees without permission. Thus communal rights remain paramount. The Chautauqua Assembly is the sovereign proprietor of the premises. Assembly authority is, however, asserted solely in the interest of the community. The proceeds arising from the sale of lots are devoted to the further improvement of the town. Plans for building, according to the means and taste of the tenant, are furnished free of charge by the assembly architect.

Contracts for building are made with private parties. Simple cottages with two ground-floor rooms, a porch, and two chambers are built for \$400. A cottage with a porch, parlor, dining room, kitchen, three chambers with closets, and an upper balcony costs about \$700. A house with a veranda, hall, reception room, parlor, dining room, kitchen, pantry, four chambers with closets, a bath room, and a balcony can be built for \$1,800. A very charming combination is a simple cottage with a front pavilion of canvas and a wooden platform for a piazza. Bishop Vincent's family and his son's family live in such tent houses, which are the most tasteful and attractive upon the Chautauqua grounds, and combine the advantages of outdoor and indoor life in summer. On fine, warm days people live on their porches and balconies. At night and in rainy weather they withdraw into their inner rooms, where open fires are sometimes a great comfort and an unfailing source of good cheer.

Sensible Americans are returning in the summer season to lives of greater ease, simplicity, and economy. Chautauqua cottages are more comfortable and more civilized than some costly camps in the back woods, or than noisy, pent-up lodgings in crowded summer hotels. The development of this really simple life, this civilized mode of returning to nature, has only fairly begun in America. We shall see more and more of it, for as the poet Sill said in his Field Notes:

Life is a game the soul can play  
With fewer pieces than men say.

#### POPULAR AMUSEMENTS AND RECREATION.

There are many varieties of amusement and recreation at Chautauqua. Best of all is the healthful open-air life. People spend their leisure outdoors, on lawns and piazzas, in the parks and groves, in friendly walks and talks. Most of the public or popular lectures are given to open-air assemblies, under roof indeed, but in buildings open to the breezes and to the light of day. There are few things at Chau-

tautauqua more beautiful than the sight of waving trees around the hall of philosophy in the grove. Something of the old Greek spirit has been consciously or unconsciously revived in the free, peripatetic, musical, athletic, out-of-door life of young people at Chautauqua.

There is a good gymnasium by the lakeside. There, at nearly all hours of the day, classes and individuals are joyously engaged in physical training under the direction of Dr. William G. Anderson, director of the Yale University gymnasium. Ever since Mr. Stagg was here Yale men have been coaching students at Chautauqua in athletic exercises, in baseball, rowing, and swimming. Match games are played by select Chautauqua nines, who usually beat the best teams from the whole countryside. At these games and at the boat races and swimming matches the entire juvenile population and many of the older people congregate and shout for Chautauqua and their favorites. Gymnastic exhibitions in the amphitheater attract great crowds, as in every college community. There is no belief in asceticism at Chautauqua. The mortifying and lacerating of the human body are no longer approved in the enlightened Christian world. A man's body is now regarded as his best friend and not as his worst enemy. By proper care and training the human form divine can be made, instead of an abode for demons of passion and disease, a living temple for the mind and soul.

It would not be easy to find, in any of our college communities, such a fine place for an athletic exhibition under roof as the Chautauqua amphitheater affords when half the benches have been removed from the arena. In the midst of assembled thousands of spectators, comfortably seated on benches, rising tier above tier, before such a cloud of witnesses the modern athlete might well imagine that the Græco-Roman games had been revived with their original environment. But what a vast difference in the spirit and character of the exercises! Instead of abnormally developed gladiators and those fierce and bloody contests of old Roman days we here behold symmetrically developed modern men engaged with generous rivalry in graceful gymnastic and athletic exercises which subserve not ignoble, cruel instincts, but the rational purposes of health and pleasure.

Tennis courts abound at Chautauqua, and are filled with eager players all day long. There is a bicycle school where old and young are taught the modern art of swift and easy locomotion. Horseback riding and quiet driving content the more conservative classes. Perhaps the most popular of all amusements is boating. Every afternoon and evening dozens of light boats may be seen gliding over the peaceful surface of the lake with merry crews of all ages. Sailboats are in frequent use, but are not so popular. Many are the excursions by steamer up and down the lake, and many the barge parties and pleasant evening picnics at cool inlets along the shore.

Occasionally there are beautiful illuminations of the grounds and of the hotel piazzas. The Fourth of July, the first Tuesday evening in August, called "Old First Night"<sup>1</sup> (when Chautauqua used to open), and Recognition Day, the fourth Wednesday in August (when Chautauqua graduates receive their diplomas or certificates), are usually celebrated at night with fireworks. The "Feast of Lanterns" and the "Illuminated Fleet" are always popular spectacles. Steamers, yachts, sailboats, and other craft are sometimes gorgeously arrayed with festoons of various colored lanterns, while brilliantly colored fires float upon the lake, and rockets and fire balloons add excitement to the charming scene. Prizes are awarded to the lake craft making the best display. "Athenian watch fires," a favorite institution on gala nights, are brilliant but well-regulated flames of gas fiercely burning, high in the air, upon great iron torches.

The old-fashioned spelling school has survived at Chautauqua. Prizes are announced in advance, and a large number of contestants come forward in the amphitheater and take benches facing a sympathetic Chautauqua audience. The spellers are grouped by States, and are usually arranged on two sides—for example, New York and the Middle States against the world. The director of the department of elocution gives out the words, which are carefully selected in advance. Rare or catch words are avoided, in order to make the contest really profitable and to prolong the excitement. Judges sit upon the platform with Webster's, Worcester's, and the Century dictionaries, to decide doubtful cases when appealed. Any way of spelling that has good authority is allowed. It is surprising to see the manifest pleasure of the audience at the continued success of certain boys, girls, or young ladies, or of favorite representatives of certain States or sections of country. Even more interesting and quite as profitable are the pronunciation matches, conducted upon the same general plan.

The music and the singing at Chautauqua are delightful. In the morning hours, from the upper piazza of the hotel, the writer used to hear the great chorus class of several hundred voices in training, under a good leader, for some evening performance or for the next Sunday's services. Public concerts, vocal and instrumental, are frequently given in the amphitheater, attracting thousands of delighted hearers. Violin players, professional singers, vocal soloists, quartets, and college glee clubs are invited to Chautauqua every season. Organ and orchestral concerts and piano recitals are well attended. Toward evening the band plays on the upper piazza at the Pier House, and hundreds of people enjoy this music in the open air. Some stroll about the grove and shady walks on Fair Point; some sit on the grassy slopes of "Mount Carmel" and other hills of little "Palestine," on Chautauqua's shore, while others row out upon the lake and hear the music across the water. It is all very pleasant to hear and contemplate if one has

---

<sup>1</sup> Chautauqua now begins on the last of June or first of July.

learned to like his fellow-men and has discovered how much he himself resembles them.

It is best to rise early at Chautauqua, for the morning there is the best part of the day for a quiet stroll about the hotel lawn and along the lake front. You of course buy an Assembly Herald from the first small boy you meet and read it at breakfast, where the local gossip and the reports of lectures generally create some amusement. In the Herald, or on bulletins conspicuously posted in the hotel and about the grounds, you read the programme for the day. Experienced Chautauquans mentally resolve what they will not hear and go at once about their morning's work. Everybody who is really accomplishing anything at Chautauqua has entered some particular class or department, and has definite duties. My class in history met at the college at 8.30 a. m. An hour later I was free, and could do what I liked for the rest of the day. Usually I read or wrote throughout the morning; took a walk before dinner and a nap afterwards; perhaps an afternoon lecture at 4 o'clock; a swim at 5; supper at 6; a drive, stroll, or quiet row in a boat with pleasant company in the early evening; and later a look at, and perhaps a seat in, the amphitheater, where with friends one is easily entertained by a popular lecture, a concert, a dramatic reading, or a stereopticon exhibition. Such amusements rarely last later than 9.30, when people return to their cottages or to the hotel for further talk on piazzas until the chimes ring at 10 o'clock. Soon afterwards everybody is expected to retire or be quiet. All persons in rowboats must come in from the lake before that hour. Now and then a special dispensation is made in favor of some merry launch party or belated company of guests. The police perambulate the grounds after 10.30, and do not encourage others to do so. Dr. Moulton, the extension lecturer, after working late one night, thought he would take a promenade around the grounds. He was halted by a policeman and had to explain himself. Of course there was no further objection in his case, but the law-abiding Englishman gave up strolling outdoors at midnight and began to walk in measured paces along the upper piazza of the hotel; but that nightly tramping disturbed the sleep of the guests, and the Englishman had to conform to the established rules, which are all very good and sensible.

#### RULES AND REGULATIONS.

The following is the substance of the by-laws governing the village of Chautauqua, which is a modern commune under as strict and as sensible communal regulations as were ever the parishes of Old or New England:

1. All who become residents of Chautauqua, for however brief a time, must pay the fee or citizen tax fixed by the trustees, according to the length of the stay.
2. All who refuse to conform to the rules or to pay the fee may be

excluded from the Chautauqua limits, and they can not reenter without the risk of criminal prosecution.

3. No intoxicating liquors shall be sold or permitted to pass the town gates.

4. Card playing, games of chance, and dancing are prohibited.

5. Canvassing, distributing advertisements, peddling, etc., are forbidden.

6. No unnecessarily loud talking or the making of any noise is permitted between 10 p. m. and 7 a m.

7. Building and other work of a disturbing or unsightly nature is not permitted from July 1 to the close of the season.

8. Dogs are not permitted to run at large.

9. On Sunday pleasure driving, boating, bathing, fishing, and games of all kinds are prohibited. No one is allowed to enter the grounds except in special cases (at the road gate only), when a permit is necessary. Persons may leave the grounds Sunday afternoon by the road gate after 4 o'clock. No boats call at the Chautauqua pier on Sunday.

10. No meetings, readings, concerts, classes, or other public gatherings are permitted in cottages or elsewhere other than those arranged for by the department of instruction. No business of any kind can be carried on without a license from the assembly.

All of these rules and regulations have approved themselves by a thorough testing during an experience of twenty years. A brief sojourn at Chautauqua will demonstrate their good sense to an open-minded observer. In particular will he commend the laws against book agents, posters, peddlers, brawlers, stray dogs, Sunday excursionists, and other disturbers of the public peace. It is generally agreed that a wise conservatism with reference to dancing and card playing is best for Chautauqua, for its managers and patrons do not wish to see the place converted into a summer resort for people who care merely for amusement. Nor would liquor selling improve the character or patronage of this educational and social commune. People who care for these things can be accommodated elsewhere. The lake is surrounded by fashionable hotels.

#### GOVERNMENT OF CHAUTAUQUA.

The commonwealth of Chautauqua is under a benevolent one-man power, that of the superintendent of the grounds. He is appointed by the 24 trustees of the Chautauqua Assembly, whom he serves also as secretary. All the ordinary functions of good local government are performed under Dr. Duncan's efficient direction. I used to address him as "Mr. Mayor," and he always responded to this title. He does away with all occasion for aldermen and a common council, and combines in his person all the necessary boards and commissions, such as public works, fire, water, health, and police. The board of education is under special management. Under his authority taxes, percent-

ages, water rates, and other local charges are collected. By his orders the grounds are illuminated; the streets<sup>1</sup> are repaired, swept, and sprinkled; sanitary rules are carried out by all the cottagers; the water supply is regulated; the fire department kept in training; the mounted police sent hither and yon, on horseback or on bicycles; and gate keepers are instructed as to special duties. By his watchfulness and penetration Chautauqua is kept free from dangerous and suspicious characters. He sees that the rules and regulations of the little community are carried out and that all things are done decently and in order. He acts as marshal on public occasions, like Recognition Day. By his good government and practical management during the past ten years Chautauqua has become a business success and a model municipality.

#### THE CITIZEN TAX.

Taxation is the economic basis of civic society. Great privileges are enjoyed by all citizens of Chautauqua, and it is quite right that some payment should be exacted. Every visitor who enters the gates for one day in July is charged 25 cents. For this small fee he can hear all the public lectures, concerts, and entertainments that are advertised for that day. He can stay a week for \$1; a month for \$2.50. During the month of August the tax is higher, the attractions are greater, and so is the crowd. The daily tariff now becomes 40 cents, the weekly tariff is \$2, and the monthly \$3. But one can buy a ticket for the entire season for \$5. These charges do not admit the visitor to any branch of class instruction, but only to the public courses and exercises that are posted from day to day on the printed bulletins.

#### FOOD AND OTHER SUPPLIES.

Chautauqua is fed from local markets. The neighboring farmers bring their milk, butter, cheese, fruit, and vegetables through the village gates and occupy convenient stalls where the cottagers come to make purchases, exactly as townspeople go to market. There are local butchers, bakers, grocers, confectioners, and dealers in all desirable commodities for household use. The meat supply is brought from Chicago. During the July strike, when connections with the West were broken, Chautauqua had no fear of famine, for she could get a sufficient meat supply from her own neighborhood.

Besides her own markets and provision stores, Chautauqua has a good bookstore, a drug store, soda fountains, various bazaars, a jeweler, an excellent optician, doctors, lawyers, ministers of all denominations, a millinery shop, a ladies' tailor, a gentlemen's furnishing store, a livery stable, public and private baths, and a barber shop.

---

<sup>1</sup> The street cleaning of Chautauqua is especially well managed. Every Saturday afternoon all the avenues and streets are thoroughly cleaned. Men with shovels and carts make the rounds of the place and scrape up all dirt and litter. Not a scrap of waste paper is left in sight.

## WATER SUPPLY.

The village of Chautauqua, like the great city of Chicago, gets a permanent water supply from an adjoining lake; but, unlike the metropolis of the West, does not poison its own well. An 8-inch suction pipe is extended 600 feet out into Lake Chautauqua, which is fed from pure streams 700 feet above the level of Lake Erie. The entrance to this suction pipe is 40 feet below the surface of the water, and the supply is drawn in and forced some distance upward into a high service reservoir, from which the hotel and cottages are supplied by pipes. The water is pure and of excellent quality. No sickness has ever been occasioned by its use.

The reservoir lies among the hills back of the town, and when full is about 900 feet long, 300 feet wide in the broadest place, and about 22 feet deep. Its estimated capacity is 10,000,000 gallons. This reservoir is filled for ten months in the year by a little stream which runs through the center of it, but in the summer months the brook supply is increased by water forced from the lake by steam pumps, as above described. There is an upper dam by means of which, if necessary, the surface and storm water can be entirely excluded from the lower reservoir and carried around it by a waste pipe. Thus, if desirable, the reservoir can be entirely filled from the lake, while a good supply of water remains in the upper pond, ready for use at any moment in case of fire. These gravity waterworks have a head 175 feet high. Connections with the water system are made at the cottage holder's expense. The annual charge for the use of water and for sewer connections is \$10.

## SEWERS.

There are few towns or cities in this country so well provided with means for good drainage as is the academic village of Chautauqua. During the year 1893 there was introduced an extensive system of sewers  $4\frac{1}{2}$  miles long, with disposal works costing nearly \$41,000. Most towns are content with an inadequate system of drains and sewers emptying into some adjoining river or body of water, thus polluting the whole vicinity and perhaps the water supply of other towns. Chautauqua has adopted the English or Coventry process of treating chemically, with sulphate of alumina and milk of lime, the sewage as it flows out from the main. By means of settling vats and filter presses the whole mass, to the extent of 300,000 gallons daily, can be rendered inoffensive. It is separated into liquid and solid portions, the first running off as clear and odorless water, and the second appearing in the form of dry, hard cakes suited for removal and use in fertilizing land. The same remarkable results that the modern traveler sees accomplished for the sewage of the great cities of Europe he may see upon a smaller scale at Chautauqua. The application of chemistry and the filter press to the treatment of sewage is comparatively new in America, and some

of our city engineers and boards of health might profitably take a summer course of instruction at Chautauqua with object lessons by the lake.

#### FINANCES.

The ways and means of supporting such a vast and complex institution as the summer school at Chautauqua are interesting objects of inquiry. From the annual report of the secretary and superintendent of the grounds, presented at a meeting of the trustees held in Buffalo, N. Y., January 30, 1894, some interesting information may be derived. Although the year of the Columbian Exposition at Chicago and of the commercial panic was not favorable to Chautauqua, she enjoyed a total revenue of over \$93,000. Of this amount, over \$32,000 came from the sale of tickets of entrance to the grounds or for temporary sojourn, nearly \$16,000 were so-called "C. L. S. C. percentages," nearly \$8,000 from Chautauqua privileges, and nearly \$3,000 from other "percentages." The chief sources of income are, then, gate money, the profits of certain publications, local privileges, and local taxation. Ten per cent is collected from all persons who enjoy any money-making rights or economic privileges at Chautauqua. Every boarding-house keeper, storekeeper, market man, milkman, or ice-cream and pop-corn vender upon the premises pays his 10 per cent. There is a regular office where these percentages are paid and where a cash rebate of 2 per cent is allowed, thus securing prompt payments.

The expenses for the general programme of the Chautauqua Assembly for 1893 were nearly \$25,000. The cost of running the college of liberal arts was over \$20,000, of which cost not one-fiftieth was covered by actual income from tuition. The general expenses of the Assembly for 1893 were over \$24,000, not including legal expenses, interest, and repairs.

Chautauqua has never been a money-making enterprise for the trustees. Indeed, it has always been more or less under a burden of debt until December 1, 1892, when it was virtually free. During the year of the Chicago Exposition the income was less than the expenditure by nearly \$3,000, but the trustees of Chautauqua had such confidence in the future that they issued bonds to the amount of nearly \$60,000 to pay for needed public improvements.

The year 1893 was, however, not a good year financially. The previous year was better. It appears from Secretary Duncan's report, published in the Jamestown Journal January 24, 1893, that the total income of the Chautauqua Assembly for that year was over \$120,000. The Chautauqua literary and scientific circles brought in nearly \$17,000 and the college of liberal arts nearly \$4,000. Altogether the revenue for 1892 was \$141,803.89. The sale of tickets that year yielded \$56,396; C. L. S. C. percentages, \$37,783; Chautauqua privileges, \$8,038; percentages, \$5,099; sale of lots, \$6,025; sundries, \$6,932.

The assembly outlay in 1892 for the general programme was \$26,611;

for the college, \$31,716; for incidental and legal expenses, \$4,338; for repairs, \$4,384; for general expenses, \$23,206; for interest, \$1,367. That year there was a profit of \$29,288, but it was nearly all expended by direction of the trustees as follows: For improvements, \$14,342; for the purchase of property, \$3,016; for real estate, \$1,877; for payment of Chautauqua debt, \$10,000. Thus, in one year permanent improvements and additions of property were made to the amount of nearly \$20,000, and the existing debt was entirely wiped out, with the exception of a mortgage of \$3,500 on a tract of land recently purchased.

Secretary Duncan's report for 1892 shows that during the nine years of his incumbency a total indebtedness of \$90,000 had been liquidated, with \$27,480 for interest, making the total payments for debts during that time \$117,480. He expended for improvements during those nine years the sum of \$183,323.

Recent seasons at Chautauqua have been attended with financial success, and we may expect to see the present bonded indebtedness extinguished at an early date and new improvements inaugurated. A summer assembly, with an income of \$120,000 and with landed property rapidly increasing in value, may look forward with a reasonable hope to a prosperous future. There are many colleges and some universities that can not show annual revenues equal to those of Chautauqua.

## PART II.—HISTORICAL AND EDUCATIONAL.

American summer schools of the Chautauqua type are historical evolutions of the Southern camp meeting. This latter institution was perhaps first suggested by the open-air life of hunters' camps, but its first actual appearance was in 1799, on the banks of the Red River in Kentucky. This first camp meeting was made necessary by a remarkable overflow of religious enthusiasm resulting from the evangelistic work of two Scotch-Irish brothers named McGee, one a Presbyterian and the other a Methodist, supported by the Rev. Mr. McGreedy, a local Presbyterian pastor, whose church proved too small to hold the gathering multitudes. Kentucky hunters and frontiersmen immediately mastered the situation by reverting to bivouacs and open-air meetings, such as Daniel Boone held under the great elm tree at Boonesboro. And thus on Red River a religious folk-mote assembled day after day in the heart of the forest. In so doing these pioneers were unconsciously loyal to the religious as well as the democratic instincts of their Germanic forefathers.

Popular education sprang from religious democracy in New England in the seventeenth century. A similar phenomenon greets the world in this nineteenth century educational evolution of the "general camp meeting." It should be remembered that those open-air religious assemblies were called general because they embraced various denominations, not alone Methodists, but also Baptists and Presbyterians.

Like the first "great and general court" of Massachusetts, the "general camp meeting" was a democratic folk-mote; in fact, more democratic than any popular assembly in early New England outside of Plymouth and Rhode Island. While recognizing the larger toleration and the widening circles of popular education now represented in all parts of this country, we would call attention to that peculiar educational democracy which has arisen from the Ohio Valley, where the currents of Northern and Southern religious and intellectual life first met and mingled.

The idea of utilizing the camp meeting for educational purposes, the thought of a "camp-meeting institute," where methods of teaching should be cultivated, was suggested by Silas Farmer, the antiquary and historian, of Detroit, Mich., in the *Sunday School Journal*, as early as April, 1870; but a similar and perhaps larger idea was early cherished by Lewis Miller, of Akron, Ohio, the inventor of the Buckeye mower, which has revolutionized the farming machinery of America. This practically minded, large-hearted, and wealthy man, who all his life had been actively engaged in Sunday-school work, and who was one of the earliest and staunchest promoters of mechanical and agricultural education in Ohio, joined hands with Dr. (now Bishop) John H. Vincent for the improvement of Sunday-school teaching by a generous alliance with science and literature. Dr. Vincent, for many years a leader in American Sunday-school work, believed most strongly in the increase of "week-day power" by the intimate association of secular and religious learning. He believed in the harmony of religion with everyday life. In the summer of 1873 the two men, Mr. Miller and Dr. Vincent, visited the Fourth Erie conference camp meeting<sup>1</sup> of the Methodist Episcopal Church, held at Fair Point, on Lake Chautauqua, in southwestern New York. They chose that Fair Point for a local establishment of "The Chautauqua Sunday-School Assembly."

#### THE SUNDAY-SCHOOL ASSEMBLY.

As an educational institution Chautauqua began in 1873 as a Sunday-school assembly for the training of teachers according to the normal methods. The next year it was determined to organize a permanent assembly for the encouragement of Sunday-school and allied work. A charter was secured from the State of New York. Twenty-four trustees or directors from various parts of the country were named. They were substantial men, sincerely interested in the proposed work. Prominent among them was Mr. Lewis Miller, who became the president, and the late Francis H. Root, of Buffalo. The latter was "one of the few men who attended every meeting of the board. In the days when it looked

<sup>1</sup> The Chautauqua Assembly at Ottawa, Kans., still presents the camp-meeting type as did once the original Chautauqua. At Ottawa, where the assembly is held in a public park granted by the city, most of the people in attendance live in tents and fully 1,500 sleep on the ground. (*Chautauqua Assembly Herald*, August 9, 1894.)

dark for Chautauqua he was one of the few who put their names to the paper that gave us means, and who said this institution must live." (Chautauqua Assembly Herald, August 21, 1893.) He was one of the eight men who erected the Athenæum. He gave his stock to the assembly, and remained to the last one of its staunchest supporters.

Students at the college and members of the C. L. S. C. and of the various classes sometimes forget the real founders of Chautauqua and the original character of its work. At a reunion of the Normal Alumni Association, August 17, 1893, Dr. J. L. Hurlbut said:

"In the earlier days of the assembly the normal class was the great institution of Chautauqua, and was attended by many hundreds of people. At one examination at the close of the course there were 300 persons who took the examinations required. \* \* \* Now that Chautauqua assumes the wider work of general education, the normal course does not stand in quite the same prominence, yet the study of the Bible, with which Chautauqua began, is as thorough and as earnest as ever—more thorough and more earnest than ever. More people are studying the Bible now at Chautauqua than ever in those early days, and the normal classes of to-day, though not so large as they were when there were fewer interests at Chautauqua, are still large and still full of enthusiasm."

At the same reunion Dr. B. T. Vincent said:

"You members of the C. L. S. C. are outcomes of the normal department. The normal class is peculiarly the one idea of the old Chautauqua. Everything else that has grown up out of the Chautauqua movement has grown up out of this root idea, to make the people intelligent about the word of God and the works of God."

This characterization is worthy of historic attention, for it reveals the genesis of the whole Chautauqua system—Bible study, the application of normal methods to Sunday-school work, the popularization of these methods, the development of the international system of Sunday-school lessons, the infusion of a religious spirit into week-day work, the growth of the literary and scientific circle, and the final evolution of the college of liberal arts. It is interesting to notice not only the development but the vigorous survival at Chautauqua of the original normal and Sunday-school classes in their varied forms—the assembly Sunday school, often conducted in the amphitheater Sunday afternoon by its first president, Mr. Lewis Miller; the primary department, guided by Mrs. J. W. Ford,<sup>1</sup> at 9 a. m. in Kellogg Hall (a memorial building devoted to children's education, the kindergarten, etc.); the Sunday school proper, at 9 a. m., under the direction of Dr. W. A. Duncan, secretary of the assembly, in the so-called "Temple"; the young people's Bible class, often led at the same hour in the hall of

<sup>1</sup> Mrs. Ford, of St. Louis, regards the primary and religious training of little children as the most important part of the work at Chautauqua, and regrets that people think so little about it.

philosophy by Mr. A. M. Martin, one of the secretaries of the C. L. S. C.; the Society of Christian Ethics; the popular morning class for Bible study in the amphitheater, where Dr. William R. Harper, the principal of Chautauqua, attracts vast audiences by his enlightened exposition of the Old Testament, and, lastly, the flourishing week-day schools of sacred literature, where the Bible is studied in the original Hebrew and Greek and also in its English form, together with biblical history, under the direction of Principal Harper, aided by a staff of expert biblical teachers, like Profs. George S. Burroughs, D. A. McClenahan, W. W. Moore, Charles Horswell, and R. G. Moulton.

"The Sunday-school normal class for the training of Sunday-school teachers, both in biblical knowledge and in pedagogical principles," still lives and thrives under the able and daily direction of Dr. J. L. Hurlbut. But how wonderfully expanded has the whole work now become in the enlarged schools of sacred literature, which attract clergymen, theological students, and mature men and women, as well as young teachers and pupils. Through Dr. Harper's institutes of sacred literature this higher educational work has pervaded the whole country, and will foster more and more the enlightened and reverent study of the Bible.

To understand the historical development of the modern Chautauqua, with its many-sided educational and social features, we must never lose sight of its original democratic and religious foundations. Whatever may be the tendencies and aspirations, the variations and specializations of this popular educational experiment, the folk-mote remains the basis of all. The Chautauqua Sunday-school assembly began its sessions on the first Tuesday evening in August, 1874, and that evening has continued to be the time for the regular "assembly opening," although fully one month of educational work along secular lines now precedes this memorable date in the Chautauqua calendar. The first distinctive objects of Chautauqua are inseparably connected with biblical study in a Sunday-school normal institute. The early programmes of the assembly show a rich succession of lectures on practical Sunday-school work and on the Bible, with conferences and discussions on methods of teaching. Into the religious current came, in successive years, more and more tributary streams representing modern science and literature in their relations to life and thought. One can distinctly trace in the records of Chautauqua the beginnings of all its modern educational tendencies, whether in pedagogics, art, social science, or the higher education. Map drawing, blackboard sketching, the study of biblical geography in a great relief map of Palestine made of turf and stones, open-air talks, concerts, and even popular entertainments, were not absent from those early programmes. Prominent among the early features of Chautauqua were its wonderful catholicity, its broad spirit of toleration, its democratic and widely representative character. From the very outset members of all the leading

✓ Protestant churches joined in the work. Church congresses were held at Chautauqua and prominent clergymen from various denominations addressed the assemblies. Among the 600 students the very first year there were representatives from twenty-five States and from the provinces of Canada.

#### THE GENERAL PROGRAMME.

Before studying in any detail the educational work actually going on at Chautauqua the observer will be greatly aided by noting at the outset the distinction between the general programme and special-class courses of the college and various other schools. The original and still characteristic educational feature of Chautauqua for the passing visitor is the daily programme of public lectures, concerts, dramatic recitals, and other entertainments, to which everybody has access by virtue of paying for his ticket of admission to the grounds for one or more days.

Bearing in mind the stranger who is within the gates for a single day, the management endeavors to offer a model daily programme throughout the season of nearly two months. Well-known lecturers are early engaged by the chancellor of the Chautauqua Assembly to give popular lectures upon attractive themes—religious, historical, biographical, social, and educational. While there is a growing tendency to increase the number of “connected, serious, and thought-compelling lectures, as opposed to more popular addresses,” stress is still wisely laid upon individual though related subjects, so that there may be a certain definite and finished character for each lecture in the public course. Very often outside specialists and professors from the Chautauqua college of liberal arts give to the public continuous courses upon the university extension plan, but the lecturers are always announced from day to day with fresh topics of general interest.

What a generous, general programme is daily offered by the Chautauqua Assembly to its patrons may be seen from the following specimen which appeared in the Chautauqua Herald for August 13, 1894. All these appointments were quite distinct from the special-class courses in progress during morning hours at the college, the teachers’ retreat, and elsewhere, for which special fees are paid. The criticism will undoubtedly be made that this bill of intellectual fare would cause indigestion, but it may be as easily replied that very few hungry people attempt to exhaust the entire menu at any good hotel table, and that it is easy for grown people as well as for children to be temperate in mental if not in physical ways.

The daily bulletins are much simpler and less confusing than the following complete schedule, which serves as a reminder to all sorts of students and public workers. The general programme, with the

omission of all minor notices, is issued in advance of every summer session :

## DEPARTMENT OF INSTRUCTION.

[John H. Vincent, chancellor.]

*Complete schedule, Monday, August 13.*

|   | A. M. |
|---|-------|
| College prayers (college chapel).....   | 8     |
| Boys and girls' meeting, Dr. B. T. Vincent (temple).....  | 8.30  |
| Children's class, Mrs. B. T. Vincent (Kellogg Hall).....  | 8.30  |
| Woman's Club, "Some aspects of college settlement work," Miss Katherine B. Davis (hall).....              | 9     |
| Chorus drill, Dr. H. R. Palmer (amphitheater).....  | 9     |
| Chautauqua congress (United Presbyterian House).....  | 9     |
| Intermediate class in Bible study, Dr. B. T. Vincent (temple).....  | 9.30  |
| Devotional hour (amphitheater).....   | 10    |
| Primary S. S. teachers' conference (hall).....  | 10    |
| Girls' "Outlook Club" (C. L. S. C. Hall).....   | 10    |
| Lecture: "System as servant or master—which?" Dr. J. M. Buckley (amphitheater).....                       | 11    |
| Boys' club (tent near gymnasium).....   | 11    |
|   | P. M. |
| Children's chorus, Mr. Leason (college chapel).....   | 2     |
| Boys' Club (tent near gymnasium).....   | 2     |
| Lecture: "Ought the United States Senate to be abolished?" Prof. H. E. von Holst (amphitheater).....      | 2.30  |
| Lecture on art and archæology, Rev. C. M. Westlake (museum).....  | 3.30  |
| C. L. S. C. round table (hall).....   | 4     |
| Guitar and Mandolin Club drill (amphitheater, room 2).....  | 4     |
| Chorus drill, Dr. H. R. Palmer (amphitheater).....  | 4     |
| Lecture on Palestine, Dr. H. B. Waterman (Palestine Park).....  | 4.15  |
| Lecture: "Hebrew thought about suffering, skepticism, and humane love," Dr. William R. Harper (hall)..... | 5     |
| Lecture: "Private property and the distribution of wealth," Dr. R. T. Ely (college chapel).....           | 5     |
| Political Economy Club (college chapel), to follow Dr. Ely's lecture.....                                 | 5     |
| Epworth League Conference (M. E. House).....  | 7     |
| Christian Endeavor Conference (Presbyterian House).....   | 7     |
| Twilight concert, Rogers's Band (Miller Park).....  | 7     |
| Boys' Club (tent near gymnasium).....   | 7.30  |
| Illustrated art lecture: "Italian, French, and Russian art," Rev. Fred Hovey Allen (amphitheater).....    | 8     |

## THE C. L. S. C.

In 1878, the fourth year of the Chautauqua experiment, which still retains all its original characteristics, the now famous C. L. S. C., or Chautauqua literary and scientific circles, began to widen from that beautiful highland lake all over the country. More than 60,000 students are now enrolled in these Chautauqua reading circles.<sup>1</sup> They may be found not only throughout the United States and Canada, but in Great Britain, Russia, India, Japan, the Sandwich Islands, and South Africa. They are simply local unions, self-organized upon a

<sup>1</sup> A good article on Chautauqua reading circles, by Dr. Edward Everett Hale, may be found in the Unitarian Review for September, 1887.

very democratic plan, for the purpose of reading good works of literature, science, and history under the central direction and guidance of Chautauqua. The members are for the most part persons past the school age. Many of them are graduates of local institutions seeking a broader outlook upon the world of knowledge. Very many are persons who have never enjoyed higher educational advantages. Although busily engaged in the employments of everyday life, they nevertheless crave some kind of intellectual and moral inspiration. Too many even of the more fortunate class who have enjoyed a school or college training sink into a local slough of despond in the years following graduation. They revert to original ignorance, like the German peasantry after leaving the Volksschulen, or else they begin to subsist upon the husks of literature, as do the great masses of under-educated men and women. One of the very best features of the C. L. S. C. attempt to raise the educational level of ordinary society is the awakening of a generous and helpful spirit on the part of the better educated, especially of college men and women, who are sometimes willing to review their former studies in readable English "by the side of less favored neighbors, giving them needed help in an unpretentious and unpatronizing way." (Dr. Vincent, in the Chautauqua Movement, p. 77.)

#### CHAUTAUQUA FOR THE PEOPLE.

Chautauqua goes to the people when people can not come to Chautauqua. Thousands of readers who are unable to spend a summer season at Chautauqua Lake pursue from year to year the prescribed courses of private reading. The simple facts are eloquent. Since 1878, when the first class was organized, 225,000 readers have joined. Every year 10,000 or more new readers are enrolled. There are at least 1,000 local reading circles, miniature Chautauquas, where, year after year, systematic courses of private reading and class discussion are enthusiastically maintained. The State of New York alone has more than 100 Chautauqua local unions. The wholesome, quickening influences of these little neighborhood circles of organized intelligence upon the surrounding communities are not overstated by the friends of the Chautauqua movement.

Not alone to neighborhood groups and to communities remote from Chautauqua does her uplifting power proceed, but also to isolated individuals and lonely toilers. "Many a frontier cabin, Southern plantation, ship on the seas, has felt the influence of the Chautauqua circle. Wherever there are earnest people who would make life more than dull routine or idle play Chautauqua is ready to go with a definite plan of reading, with specified books, with hints and suggestions, with a monthly magazine, and other means of stimulus and aid. Individual readers may join, even though there be no 'circle' in the community."

The strong hold which Chautauqua has upon individual students is indicated by the simple fact that in the exciting year of the Columbian

Exposition more than 1,000 graduates of the four-years course in the C. L. S. C. continued their private reading under Chautauqua direction along more special lines. Such graduate individual work goes on for years.

It is a good thing for isolated students or sluggish communities to have a well-managed course of prescribed reading. Any definite, well-considered plan is better than no plan. The main advantage of all school and college training comes from its methodic, regular character. There are doubtless many mistakes in the choice of teachers and text-books, but, in spite of mistakes and defective theories, the great process of human education is still going forward by courses of curricula far better than by spasmodic, jerky, capricious efforts. The same principles of method and continuity which guide all school and college training should be applied to higher popular education. In times past the Chautauqua counselors may not always have discovered the best text-books, but they did what they could, and perhaps they understood their popular constituency far better than did some educational critics and would-be advisers, who in satisfying their own high ideals, overshot the mark.

#### THE GREATER CHAUTAUQUA.

President Merrill E. Gates, of Amherst College, is a believer in the larger idea of Chautauqua pervading the home and neighborhood life of the American people by means of good reading in history, science, and literature. He says:

"The true significance of the Chautauqua movement seems to me not to lie chiefly in the great summer gatherings, in the crowded lectures, the enthusiastic conferences, and the inspiring commencement addresses at Chautauqua itself, nor in the diplomas awarded there. But the Chautauqua circles throughout the land mean useful, wisely directed home reading and intelligent general conversation in the home circle wherever their influence extends. Not only is it true that neighborhoods which have been stagnant for the lack of any common themes for conversation higher than the local gossip have been stirred to new intellectual life when the circles met to consider the facts of science or history and the noble thoughts and perfect forms of the best literature of all time, but in the home circle as well, in the family life of thousands of homes, children and parents have new themes brought into their horizon and talked about with a common interest at the table and in the evening. More than is yet realized has been done to purify and strengthen that intelligent, Christian home life which is the hope of our land."

#### CHAUTAUQUA A LIVING FORCE.

The Chautauqua Assembly Herald, August 23, 1894, emphasized this point of view:

"The recent social disturbances emphasize the need for greater and

more widespread intelligence among the great body of the people. Among the beneficent developments of the past twenty years perhaps no movement has arisen which is destined to exert a wider or more healthful influence upon the public mind than that of the Chautauqua Literary and Scientific Circle. All over the land thousands of reading circles have, during the past sixteen years, carried on discussions upon historical, literary, and economic subjects, and their influence has been felt in stimulating other literary movements throughout the country, while the Chautauqua circle itself is only in the beginning of its usefulness. The plan of the work for the current year is peculiarly attractive, as it deals not only with the growth of the English nation, but with the study of Europe in the nineteenth century, especially a timely subject in view of the stirring events which at present involve so many European nations. As is the case in every great movement, the power of the C. L. S. C. may be indefinitely increased by adding to the number of those who are willing to serve as leaders. Many young men and women have more of the quality of genuine leadership than they appreciate, and such are often surprised to find that a handful of earnest, determined students have almost without effort so added to their number as to leaven the whole community. There are few persons who can not influence at least one other, and it is by this personal influence that power is to be generated which will in time revolutionize society. The C. L. S. C. is a present living force and needs only a great number of active disseminators of that force to extend its influence through all classes of society. Ministers, teachers, and professional men and women of all classes are already enlisted in the work as helpers. But the field is wide and more are needed. Let all who are interested in the future welfare of the nation look carefully into this plan for the self-education of the multitudes."

#### THE CHAUTAUQUA CIRCLE.

Let us now inquire exactly what Chautauqua proposes to accomplish for higher popular education and how she goes about her work. We quote from daily announcements in the Chautauqua Assembly Herald:

"The C. L. S. C. (Chautauqua Literary and Scientific Circle) aims to promote habits of reading and study in history, literature, science, and art; to give college graduates a review of the college course; to secure for those whose educational privileges have been limited the college student's general outlook upon the world and life, and to encourage close, connected, persistent thinking.

"A definite course covering four years.

"Each year's course complete in itself.

"Specified volumes approved by the counselors.

"Allotment of time by the week and month.

"A monthly magazine with additional readings and notes.

"A membership book with review outlines and other aid.

"Individual readers may have all the privileges.

"Local circles may be formed by three or more members.

"Time required, about one hour daily for nine months.

"Certificates granted to all who complete the course.

"Seals to be affixed to the certificate are granted for collateral and advanced reading.

"The C. L. S. C. maintains that the higher education should be extended to all, young and old, rich and poor, and that education, best begun in academy, college, and university, is not confined to youth, but continues through the whole life. The circle is not in any sense a college, either in its course of study or in its methods of work. Yet it puts into the homes of the people influences and ambitions which will lead many thousand youths to seek colleges and universities. The circle is unsectarian and unsectional, promoting fraternity and inspiring help to the home, the church, and the state.

"The C. L. S. C. is for busy people who left school years ago, and who desire to pursue some systematic course of instruction.

"Individuals may prosecute the studies of the C. L. S. C. alone, but their efforts will be greatly facilitated by securing a local circle of two or more persons who agree to meet as frequently as possible, read together, converse on the subjects of study, arrange for occasional lectures by local talent, organize a library, a museum, a laboratory, etc. A local circle may give attention to the cultivation of taste, cleanliness, etc., in towns and villages, and discuss sanitary and other questions tending to public health and social progress.

"It is for high-school and college graduates, for people who never entered either high school or college, for merchants, mechanics, apprentices, mothers, busy housekeepers, farmer boys, shop girls, and for people of leisure and of wealth.

"Many cultivated men and women, whose reading covers a wide field, keep up regularly the C. L. S. C. work, finding that this comprehensive review every four years gives to their other reading a value often lost to the unsystematic reader. Several members are over 80 years of age; comparatively few are under 18.

"The circle has gradually secured a class of graduates (classes of 1882-1895) who wish to pursue the current year's course of reading with the undergraduates.

"An annual fee of 50 cents will entitle a graduate to all communications from the central office for that year, including the 12-page memoranda on the regular year's reading.

"In this way two seals can be earned—

"(1) For reading the books of the regular course and filling out the regular 4-page memoranda, a special seal.

"(2) For filling out the 12-page memoranda on the reading of the regular course a white seal will be given if 80 per cent of the questions are correctly answered.

"The membership book contains duplicate sets of question papers, called memoranda. These are not examination papers, but are review questions which may or may not be answered from memory. The filling out of these memoranda is not essential to graduation.

"The 4-page paper gives a brief condensed review of the whole course, and members who fill out this paper for each of the four years receive one white seal at graduation. The 12-page paper offers a more thorough review. One white seal is given for each paper which shows 80 per cent of correct answers. Besides the seal—

"(1) Any seal-course paper will be corrected and returned to the student upon payment of a special fee of 50 cents.

"(2) Any seal-course paper will be graded and returned to the student upon payment of a fee of 25 cents. (In this case the questions which are not wholly correct will be indicated, but the correct answers will not be given.)

"(3) All other seal papers for which no special fee has been paid will be graded, and the exact grade reported to the student, but the papers will not be returned. The 4-page papers will be examined to determine whether they rank above or below 80, and the result reported.

"(4) The 4-page papers will be graded and returned for a fee of 25 cents, or corrected and returned for a fee of 50 cents. One fee for the four papers."

#### THE FOUR-YEARS COURSE.

*General subjects of the four-years course.*—1895-96: American history, literature, and institutions; beginnings of civilization—psychology. 1896-97: French history—astronomy; oriental and Greek civilization. 1897-98: German history—political economy; Roman history, literature, and art. 1898-99: English history, literature, and art; nineteenth century history—geology.

Each year of the Chautauqua four-years reading course bears a distinctive or characteristic name. 1894-95 is called the "English year," because chief attention is paid to English history, English literature, and English composition. The subject of Europe in the nineteenth century has been wisely added to this course. Special attention is devoted by *The Chautauquan* (the organ of the C. L. S. C.) to articles on English and nineteenth century history, and a new department has been added to the magazine, namely, a special study of current topics.

#### THE COURSE FOR 1894-95.

The prescribed reading for 1894-95 is as follows:

|  |        |
|--|--------|
| The Growth of the English Nation (illustrated). Katharine Coman, professor of history in Wellesley College.....          | \$1.00 |
| Europe in the Nineteenth Century (illustrated). H. P. Judson, professor of political science, University of Chicago..... | 1.00   |
| From Chaucer to Tennyson (with portraits). Henry A. Beers, professor of English literature, Yale University.....         | 1.00   |

|   |        |
|---|--------|
| Renaissance and Modern Art (illustrated). W. H. Goodyear, lecturer at Brooklyn Institute.....                                     | \$1.00 |
| Walks and Talks in the Geological Field (illustrated). Alexander Winchell, late professor of geology, University of Michigan..... | 1.00   |
| The Chautauquan (12 numbers, illustrated).....  | 2.00   |

The total cost of books and the Chautauqua magazine is, therefore, \$7. Considering the field covered and the excellent character of this educational material, one can not pronounce this charge excessive. Usually the cost is defrayed by a group of people who consent to use the same text-books. The importation of this choice collection of reading matter into a family circle or little neighborhood amounts to the institution of a library or book club, somewhat superior to the cheap novels and expensive subscription books which find their devious way into rural households.

#### THE COURSE FOR 1895-96.

|   |        |
|---|--------|
| The Growth of the American Nation (illustrated). H. P. Judson, professor of political science, University of Chicago.....     | \$1.00 |
| The Industrial Evolution of the United States (illustrated). Col. Carroll D. Wright, United States Commissioner of Labor..... | 1.00   |
| Initial Studies in American Letters (with portraits). H. A. Beers, professor of English literature, Yale University.....      | 1.00   |
| Some First Steps in Human Progress (illustrated). Prof. Frederick Starr, University of Chicago.....                           | 1.00   |
| Thinking, Feeling, Doing (illustrated). E. W. Scripture, director of psychological laboratory, Yale University.....           | 1.00   |
| The Chautauquan, a monthly illustrated magazine (Volume XXII begins with the number for October, 1895), one year.....         | 2.00   |

The readings of the several classes for any one year are the same. The course marked out above for the year beginning in the autumn of 1895 and closing in the early summer of 1896 will be: The first year for the class of 1899; the second year for the class of 1898; the third year for the class of 1897; the fourth year for the class of 1896.

#### HOW TO JOIN THE C. L. S. C.

Send answers to the following questions, together with 50 cents (fee for one year), to John H. Vincent, drawer 194, Buffalo, N. Y. [A blank containing these questions may be had by applying to the C. L. S. C. office at Buffalo.]

1. Give your name in full.
2. Your post-office address, with county and State.
3. Are you married or single?
4. What is your age? Are you between 20 and 30, or 30 and 40, or 40 and 50, or 50 and 60, etc.?
5. What is your occupation?
6. With what religious denomination are you connected?
7. Are you a graduate of a high school or college? If so, give the name of the institution.
8. If you have been a member of the C. L. S. C. in past years, but are now beginning anew, state to what class you formerly belonged.
9. Do you join as (a) an

individual reader, (b) a home-circle reader (in a family), or (c) as a "local-circle" reader? The reader may change from one relation to another at will.

#### C. L. S. C. OFFICES, BUILDINGS, AND ORGANIZATION.

The visitor at Chautauqua will find the busiest office work in progress at the new and attractive C. L. S. C. building. Here come students for programmes and information regarding classes and special courses of every sort. Some of the rooms of this building are used for class work and special conferences. Opposite the C. L. S. C. offices is the building devoted to the editorial and publishing departments of the Chautauqua Assembly Herald. Here may be found the various publications and text-books used in connection with the work of the C. L. S. C.

In one quarter of the grounds may be seen class cottages and other buildings devoted to class rooms and reunions of the C. L. S. C.. Considerable class spirit is developed in these vast reading circles scattered throughout the country. They have their mottoes, their colors, class badges, and class flowers. Through the columns of *The Chautauquan*, the monthly magazine devoted to the interests of the C. L. S. C., the various classes are represented by personal letters and official communications. During the summer season open-air conferences or so-called "round tables" are held in the hall of philosophy in the interest of the C. L. S. C.

When recognition day approaches, toward the last of August, class rallies become frequent, and a surprising enthusiasm is developed. Sometimes a large number of the earlier classes are present. It is customary from time to time to call the roll of all the classes, from the very first which graduated in 1882 down to the one which is in process of formation. There are class presidents, class secretaries, a general secretary, and an executive secretary, all of whom combine to promote class spirit and progress from year to year. The recruiting stations for the C. L. S. C. are the local Chautauquas (about 50 in number) and the round table conferences, at which well-known speakers represent and encourage the Chautauqua idea.

The best source of information regarding the character and usefulness of the C. L. S. C. work may be found in the annual reports (published in the Chautauqua Assembly Herald) by Miss Kate F. Kimball, who has been for some years the executive secretary and practical leader of this deservedly popular educational work. Miss Kimball is the author of a bright remark, quoted at Chautauqua by a Smith College graduate as the cause of her own conversion to "C. L. S. C. ism," and recommended to all other college graduates: "The C. L. S. C. is the best thing to keep your background fresh."

Miss Kimball, the sister of a Johns Hopkins physicist, now professor in Amherst College, is at the head of a large staff of clever and efficient young women at the central office of the C. L. S. C. at Buffalo, N. Y.

The passing visitor will find that office the scene of busy correspondence with Chautauqua pupils who are scattered throughout the world. From this center circulars of instruction and directions for study are distributed, and to this center all reports of progress are returned. The methods of classifying and preserving the records of Chautauqua work are businesslike and suggestive of good administration. At the central office may be seen a full set of the outlines for various courses of study in connection with the C. L. S. C.

#### CIRCULATION AND USE OF BOOKS.

At the fourteenth anniversary of the founding of the Chautauqua Literary and Scientific Circle, August 6, 1892, Principal J. C. Hurlbut said:

"The Chautauqua Circle has aided in the circulation of good books. If the man who makes two blades of grass grow where one grew before is a benefactor of the world, what shall we say of him who is able to put one good book in the hand of a reader? The Chautauqua Circle has circulated something like an average of 30,000 sets of books every year, or near that amount, and sometimes, indeed, more, and in some years perhaps a little less; but that number would perhaps be the average figure. In fourteen years 30,000 sets would be about 180,000 volumes per annum, and in fourteen years it would come to nearly 2,000,000 copies of good books that have been circulated under the auspices of the Chautauqua Circle. It is something to have put one good book into the hand of a reader. It is more to have put 2,000,000 good books into the hands of the people; and that is something which nobody can gainsay the Chautauqua Circle has accomplished.

"They are books that would not have been circulated, and very nearly all of them would not have been written, if it had not been for the Chautauqua Circle. I remember when the first order was sent from Chautauqua for the first book in the C. L. S. C. course. A telegram was sent to the great firm of Harper Bros., in New York, asking them to send to Chautauqua 300 copies of Green's Short History of the English People. They thought some wonderful mistake had been made; that it was probably 3 copies that were needed, or at the outside 30. They were almost paralyzed at the order—that an institution supposed to be something of a camp meeting should send for 300 such books at one time. The 300 grew to thousands before the class of the first year had finished its readings. These books have been circulated, and a great many books are in libraries that would not otherwise have gone. Many books in libraries are allowed to become dusty with age, and a great many are put away on center tables and opened about once a year. These books of the Chautauqua Circle—2,000,000 of them—have been read during the last fourteen years.

"If you should go among the homes of the people who purchased them you would find them, not on the upper shelf, or the shelf that is locked up, or in the case which no one can open, but you would find them on the shelf where people can get at them, find copies lying on the sewing tables of women, upon the counter, or in some other convenient place accessible to the clerk in the store. More than that, you would find that these books have been read. There are very few books circulating in large numbers but in a very little while they also, in very large numbers, come back to second-hand bookstores—in two or three years after the book has been published and perhaps widely circulated. If you go into our second-hand bookstores you can always find a large number of copies of such books. I am one of those people who spend much time in second-hand bookstores looking for books, and sometimes seeking some particular work; and I have rarely found copies of the books issued under the auspices of the Chautauqua Circle in such places. Those books have been kept, they have been read, and bear the signs of use; been read over and over again, and sometimes passed from hand to hand; and if you go to the homes in this country you will see the shelf of Chautauqua books, the nucleus of a library. It has done more than circulate books; it has led people to read, led people to think as the result of reading.

"You can not read a book of power without its having some sort of influence upon your character. I read the lives of eminent men and find how often a book, at some critical period in their history, has given a bent to their nature and their entire after life. A man of science happened in his youth to pick up some scientific work, and had his attention and thought turned to that line afterwards, which began with the reading of that book. A man read some book upon religion, upon the relation of man with God, and became an honest living Christian as a result of it. So we find all over the world that books influence character. What has been the influence of the Chautauqua books upon those who have read them? If you were to obtain their testimony, you would find they will tell you with surprising unanimity that not only their minds have been enlarged, not only has the world of thought in which they live been widened, but their hearts have been lifted up, their characters have been strengthened, they have become the better because of this institution which was established fourteen years ago on this very place. I believe there is a direct result of the Chautauqua Circle that not many people realize, although many people feel it. Here is a father and mother who have been reading the books of this course together. It has given them something to think about. It has lifted up their minds, and as a result in the family the themes of conversation around the table and around the fireside are thoughtful and intelligent themes. They talk about the heroes of the past; they talk about the principles of science, and the sons and daughters and others in the family receive an impetus and inspiration toward

education. And I believe if you could go through the colleges of America to-day, East and West, you would find many students there who, through the influence of their parents, received their first shaping toward the intellectual life from the Chautauqua Circle."

#### DR. J. G. FITCH ON READING CIRCLES.

A competent judge of educational matters, Dr. J. G. Fitch, Her Majesty's chief inspector of the training colleges of England, and author of *Lectures on Teaching*, said to an audience of 5,000 people at Chautauqua, August 7, 1888, on the opening night of the assembly:

"One feature of your work specially interests me. I mean the service which your reading circles render to remote students, who have not access to great libraries nor to great teachers, to colleges, or to universities, but who in silence and at a distance from these opportunities are nevertheless trying, with God's help, to improve their minds and to get something of the treasures of wisdom that lie enshrined in books. I do not think that any of us have adequately realized the great change that is going on in the intellectual life of Europe and of this country through the multiplication of cheap books. I do not think that we have ever rightly appreciated the wealth that there is in books, and the power there is by which they may do what universities and oral teaching were once the only means of doing. \* \* \* It seems to me that you have hit upon one of the most admirable and fruitful devices ever yet adopted when, by means of reading circles and correspondence helps, the solitary student has opened to him what he shall read and what use he shall make of his reading when he has it. This is a great work on which you have often invoked the divine blessing. \* \* \* I earnestly trust that it may continue to go on and prosper, that this great assembly may be one of the most notable agencies by which you may encourage the love of truth, the devotion to knowledge, and the help and guidance of the people of America."

#### CHAUTAUQUA AND GREEK CULTURE.

In these days, when not a few college men are turning away from classical to modern studies, it is gratifying to find the Chautauqua literary circles still directing attention to old Greece. Of the seven books required for the Greek year in 1888-89, three related to the history and literature of Hellas. The Chautauquan magazine, which has a circulation of nearly 70,000 copies, announced for its readers in the C. L. S. C. a series of nine articles on Greek biography by Prof. T. D. Seymour, of Yale University, and a number of papers on modern Greece by J. P. Mahaffy, of Dublin; also sketches of Greek art and archæology, with some account of physical training and the position of women among the Greeks. In a special or graduate course of private reading in connection with the four-years course in the C. L. S. C. it

is interesting to note Mahaffy's Old Greek Education. This entertaining little volume it is well to read with Chautauqua in mind, and some may have the curiosity to examine the Outline History of Greece, proposed for the C. L. S. C. It gives one a curious feeling toward these little books to think that they are the means by which a knowledge of Greek civilization and Greek culture is transmitted to thousands of eager minds in our great modern democracy. Is this knowledge superficial? So is all knowledge. American education hardly scratches the surface of things either in school or college. The ancient Egyptians, we are told, obtained very good crops of grain without plowing in the fertile mud left by an inundation of the Nile. American pioneers have raised a great deal of wheat in their rough way from the virgin soil of forest clearings. "Behold the sower went forth to sow." Some seeds fell by the wayside, others upon rocky places, others among thorns, but still others upon good ground and yielded fruit, some a hundredfold. "He that hath ears, let him hear."

#### ORGANIZATION AND MANAGEMENT OF LOCAL CIRCLES.

Perhaps a few of the following suggestions may prove helpful in the foundation and management of local reading circles in this country. Most, if not all, of the points have been derived from actual knowledge of and experience with Chautauqua circles. The general secretary, Mr. A. M. Martin, has collated fifty such points in the "Chautauqua Pocket Manual. Local circles; how to organize and how to conduct them. Office of the C. L. S. C., Buffalo." At Chautauqua the present writer saw, after it had been to the World's Fair, a scrapbook full of original manuscript or typewritten programmes, representative of the work of these local reading circles scattered throughout the land. The variety, originality, suggestiveness, and educational interest of these programmes, invented by the people and for the people, were really marvelous. They surpassed most systems of theoretical pedagogics, and show what vital powers of educational self-help are now springing up in America.

(1) A local circle is an organized meeting for mutual improvement. It may be formed of any number from 3 to 20. It should hold regular meetings, weekly and fortnightly, to review the subjects and encourage members in daily reading.

(2) A simple organization is the best. All the officers needed are a president, a secretary and treasurer, and an instruction or executive committee to plan the work in advance and arrange the programmes for class meetings.

(3) Circles should meet in the church lecture room, or in the school-house, or in Y. M. C. A. parlors, or wherever good accommodations can be freely obtained.

(4) Occasional public meetings should be held in the church or town hall, and general invitations issued to hear a lecture by some person

not a member of the circle. Social receptions and literary, musical, or art exhibitions may also be held.

(5) At all local meetings the minutes should be read, the roll should be called, and reports of progress asked from each member.

(6) Ten or fifteen minutes should be devoted by the president or class leader to general drill. Questions should be asked upon the class reading in such a way as to bring out concisely the pivotal points of the lesson.

(7) Questions left unanswered at the previous meeting should be revived and settled.

(8) Debate should be encouraged. It is well to appoint leaders or disputants on each side of a mooted question and to limit the time of each speaker to a few minutes.

(9) A competitive question exercise is sometimes profitable. Two appointed leaders should choose sides and ask questions alternately, on the required reading, of the persons on the opposite side. A record of the questions answered or missed by each side affords all the interest of an old-fashioned spelling school.

(10) Put questions to the whole circle which shall awaken serious thought and bring out a series of good replies, which may be formulated by the secretary for class use or reference.

(11) Require the members in turn to give each an interesting fact noted in connection with the reading under discussion, and continue the exercise until each person has had five opportunities to contribute to the general stock of knowledge.

(12) Listen to résumés of the whole matter by appointed members, or to essays or short talks upon special subjects.

(13) Require some one to write upon the blackboard an analysis, synopsis, or outline of the topics considered at each meeting.

(14) Receive from members questions for investigation and report at the next meeting.

(15) Make use of written questions, carefully prepared in advance by the leader or by appointed members for testing the knowledge of the class. The questions may be drawn or distributed, and answers given orally or in writing.

(16) Hold "round tables," or conferences, for the general improvement of the circle. Here helpful suggestions may be introduced. Here special topics and historical characters can be discussed. Here the meaning and pronunciation of words should be explained. Here all practical difficulties are presented and mooted questions solved.

(17) Select readings from general literature bearing on the subjects in hand may be introduced.

(18) Imaginary tours through the countries and cities studied will awaken great interest if accompanied by maps, photographs, or lantern views, with picturesque descriptions of travel from entertaining authors.

(19) Declamations, readings, recitations, and brief extracts from prose or poetry relating to subjects that interest the class will prove very stimulating.

(20) Vocal or instrumental music, solos, duets, quartets, choruses, or amateur orchestras will enliven and entertain the circle. Home talent should always be developed or pressed into social service.

(21) Utilize all available local talent. Secure for the circle helpful and relevant lectures by clergymen, physicians, lawyers, teachers, college graduates, and passing visitors. Try to preserve as far as possible the unity of work undertaken by the reading circle and do not let it degenerate into a "variety show."

(22) Encourage local history in the "American year." Have papers upon local topics. Publish them, if approved, in local newspapers. Keep scrapbooks of such local contributions.

(23) Begin, or help develop, a museum in connection with a town or local library. Collect rare old books, portraits, prints, maps, manuscripts, historic letters, or records. Cultivate local pride and interest in historic places and old traditions. Mark historic sites or buildings with simple memorial tablets.

(24) Identify the circle with the higher intellectual, moral, and social interests of the community. A little group of public-spirited Chautauquans may uplift a whole neighborhood, promote village improvement, good taste, neatness, sanitation, in short, the public health and welfare, in countless ways.

(25) Do not neglect contemporary history and the progress of the outside world. An occasional synopsis or digest of current events will help to make members more alert and intelligent in the reading of newspapers and magazines.

(26) Make excursions to battlefields and other historic places. Visit museums, libraries, art galleries, and public buildings whenever an opportunity is afforded. Report what you have seen to your circle and stimulate others to use their powers of observation in travel or visitation.

(27) Keep records of all meetings. Preserve the history of your own circle and all its doings. Make the journal of each evening so interesting that members shall delight to hear it read at the opening of the next meeting.

#### A JEWISH BRANCH.

One of the most novel developments of Chautauqua C. L. S. C. work was the establishment of a Jewish branch in 1893 by Rabbi Henry Berkowitz, of Philadelphia. The origin of this new and interesting movement is described by Rabbi Berkowitz in an interview published in the Chautauqua Assembly Herald August 4, 1893. He said the work started with a lecture given by himself in the Rodef Sholom congregation at Philadelphia. He there urged self-culture along Chautauqua lines. As a result the Young People's Society of his congre-

gation issued a call which resulted, April 18, 1893, in the appointment of a joint committee from the various Jewish societies of the city. By means of this committee an organization for the encouragement of Jewish self-culture was effected. Later, at the suggestion of Rabbi Berkowitz, who had been in correspondence with Chancellor Vincent, the organization was placed upon a C. L. S. C. basis. It was thought wise to profit by the long experience and existing methods of Chautauqua and to adopt her four-years course of reading, with some modifications to meet the special needs of Jewish students. Two new courses were added: (1) Jewish history and literature, and (2) readings in Jewish literature. The first and more advanced course was prepared by the learned rabbi, Prof. Richard J. H. Gottheil, of Columbia College, who has delighted Chautauqua audiences by his liberal views. His syllabus of instruction is very suggestive, and was used by the writer for review purposes in connection with a collegiate class course in Jewish history at the Johns Hopkins University. A popular course of reading in Jewish literature was also instituted for the "Young Folks' Reading Union," after the model of the Chautauqua Young Folks' Course.

While the local headquarters of this new educational work among the Jews is at Philadelphia, enrollments are reported to the central C. L. S. C. office at Buffalo. Jewish members receive the C. L. S. C. membership book and all other official communications. In Miss Kimball's report, published in the Chautauqua Assembly Herald August 23, 1894, is the following statement from Dr. Berkowitz: "We have enrolled some three hundred members, and a great many are following the readings who are not regularly enrolled. One hundred and forty-seven of these members belong to the general C. L. S. C. course, the others to the two special courses. The membership extends throughout 14 States of the Union and 15 circles have been reported from various cities and towns. The membership includes persons of the most diverse callings in life, and the courses of reading are found to be suited to the needs and tastes of readers from 20 to 70 years of age. \* \* \* This has been a year of planting. The promise of the harvest in the future is excellent."

More recent reports show that this Jewish work has been extended through 18 States and that the membership has reached about 500. The work has kindled great enthusiasm not only among earnest-minded Israelites who have been encouraged by the Jewish press and pulpit, but also among Christian Chautauquans.

There are now special courses in Jewish history and literature covering the entire range of these subjects from Bible times to the present. Very elaborate syllabi of instruction and of recommended readings have been prepared by Professor Gottheil, of Columbia College, who has based his outlines upon Graetz's famous History of the Jews, a work now published in English by the Jewish Publication Society of America.

A Young Folks' Reading Union was organized for the encouragement of home study by Miss Diana Hirschler, of Philadelphia. The object of the union is to foster an interest in Jewish history and literature. Among the books required for the first year are the *Outlines of Jewish History*, by Lady Magnus; *Stories from the Rabbis*, by Dr. A. S. Isaacs; and *The Hammer, a Story of the Maccabees*, by A. J. Church. Other good books are recommended.

An enrollment fee of 25 cents is required from each member. A leaflet of instruction is then issued, arranged for eight months and outlining the course of study, with suggestions for semiweekly meetings in local reading circles. The leading features of the Chautauqua system have been adopted, including the custom of sending memoranda to the central office in answer to specific questions. A certificate is given to all who complete the two-years course.

Thus the example and influence of Chautauqua have made themselves felt for good in the encouragement of higher popular education among the oldest historic people of the world. This fact is paralleled by the institution of a Catholic Chautauqua along precisely the same lines as the original C. L. S. C., including the summer school. This Catholic movement will be described under Part III of this report.

#### PRISON WORK.

For many years the work of the Chautauqua literary and scientific circles has been faithfully carried on in the prisons of Stillwater, Minn., and of Lincoln, Nebr. The Look Forward Circle of this latter place began the Chautauqua year 1893-94 with 60 members, of whom 32 were new accessions, 14 had read one year, 11 had read two years, 2 three years, and 1 had received his certificate as a graduate. Of this persistent Chautauquan a correspondent in Lincoln writes to Miss Kimball, secretary of the executive committee: "He is a remarkable man, though he has had few opportunities for education. He has from the outset applied himself most diligently, and at the class exercises has shown himself thoroughly prepared and his ambition and earnestness have exceeded anything I have seen even in other circles." Miss Kimball says the prison circle has had the aid and cooperation of professors from the Nebraska State University and others who have made the programmes interesting and helpful. "The Prison Reform Club, which is the outgrowth of this circle work, is composed of a few Lincoln Chautauquans who have shown their genuine interest in the Look Forward Circle by helping those who are discharged from prison to enter fields of honorable employment and to make them feel that they have friends who are really interested in their welfare. The Pierian Circle at Stillwater, Minn., publishes each week in the Prison Mirror reports of the circle meetings and papers written by the men. \* \* \* During the year more than thirty papers written by members were published in the Mirror, and all of these show thought and care, and many of them

decided originality." (Miss Kimball's report for 1893-94, published in the Assembly Herald August 22, 1894.)

#### LANIER AND THE CLASS OF 1898.

Miss Kimball, in her report of the growth and progress of the Chautauqua Literary and Scientific Circle for 1894-95, says:

"While the distractions due to the World's Fair and to the prevailing financial depression were not without their influence upon the membership of the C. L. S. C., the circle has been quick also to feel the impulse of better times, and this has been strikingly shown during the past year in the increased membership of the new class of 1898, which exceeded that of 1897 by more than 2,000 students. Early in the summer of 1894 a request came from one of the Southern Chautauquas that the class might be named in honor of the two Southern poets, Sidney and Clifford Lanier. The suggestion was very gladly accepted, and the class adopted as its motto a line from a poem of Clifford Lanier, 'The humblest life that lives may be divine.' A decided increase in the membership of the C. L. S. C. in the far South, especially in Alabama, Georgia, Virginia, Tennessee, and Maryland, is pleasant evidence of the appreciation in which the name of Lanier is held. In certain other portions of the country also the gain in membership has been unusually large. Illinois, Connecticut, Kansas, and Oregon have a larger enrollment than for several years past. In New York, always a strong State, the gain has been much greater in proportion than usual, while in foreign lands the membership is nearly double that of last year. The subjects of study for the year, English and nineteenth century history, proved very attractive, and this fact, together with the activity of State and county secretaries and C. L. S. C. workers in all parts of the country, awakened widespread interest."

#### GRADUATE COURSES FOR THE C. L. S. C.

A remarkable and encouraging fact in the C. L. S. C. work is that so many of its graduates continue their studies after completing a four-years course and receiving their certificates. For the year 1888-89 Miss Kimball, the secretary, reported that one-tenth of the whole previous graduate constituency of Chautauqua had been pursuing various lines of work under the direction of their alma mater. Some were taking the new and improved courses of the C. L. S. C. Some were uniting in graduate circles for special and advanced work in history, literature, or science, and some were working alone, but still under Chautauqua direction.

"These graduate circles," says Miss Kimball, "stand as the permanent representatives of the Chautauqua movement in hundreds of communities." It is the declared purpose of the C. L. S. C. "to develop each year some one special course of study to which the attention of all graduates shall be directed for that year. Facilities for advanced

work and a limited amount of personal direction from able instructors will be one feature of these special courses, in order that graduates may keep ever in mind the high attainments which are possible to them. By this means the unity of the graduates' work will be largely increased, although circles having special preferences in any one line of work will still be at liberty, as heretofore, to make their own selection of courses." Special recognition in the form of "seals" or certificates are given for this extra work. A combined course in English history and English, prepared for Chautauqua graduates by college professors, has proved very attractive and helpful. A new course on modern European history, to be studied by means of standard authorities with a syllabus of topics and suggestions, was prepared in 1895 by Dr. H. B. Adams and G. B. Lynes, of Johns Hopkins University.

Special attention is directed to current history in the magazine called *The Chautauquan*, by Mr. Ned Arden Flood, son of Dr. Theodore L. Flood, the editor. A new course in foreign travel through England has been devised by Miss Susan Hale, of Boston. The student will, by the aid of good literature and pictures, maps, etc., take an imaginary journey through the most interesting historical places of our mother country.

Among the special or "seal" courses of reading designed for graduates and others are the following: (1) General history; (2) English history and literature; (3) oriental history and literature; (4) Greek history and literature; (5) Latin history and literature; (6) American history and literature; (7) modern history; (8) political science; (9) geography and travel; (10) biblical literature; (11) secular normal course for teachers; (12) astronomy; (13) geology; (14) chemistry; (15) microscopy; (16) botany; (17) zoology; (18) physics, two courses; (19) psychology; (20) philology; (21) art; (22) the house and home; (23) temperance; (24) missions; (25) Sunday-school normal; (26) advanced normal; (27) physiology; (28) the Bible; (29) Shakespeare; (30) French history and literature; (31) stories of the nations; (32) agriculture; (33) anthropology.

Each course is accompanied with a kind of suggestive syllabus of topics or questions, upon which answers or so called "memoranda" are written. Many of these helpful outlines and topical arrangements for private study were prepared by experts, and are excellent guides for individual students or classes who are compelled to work at a distance from any established institution of learning. The scheme of study in anthropology, prepared by Dr. Frederick Starr, of the University of Chicago, is particularly good.

#### GRADUATE WORK AT PORTAGE, WIS.

In her report of the C. L. S. C. for 1888-89, Miss Kimball, the executive secretary, describes a remarkable educational experiment undertaken by Chautauqua graduates in Portage, Wis. In that busy

manufacturing town a distinct circle was organized for a comprehensive study of Germany, its geography, history, biography, literature, and art. "Topics for study were carefully arranged in advance and printed upon a leaflet, with lists of desirable books of reference. A course of stereopticon lectures was suggested as an aid to study, and almost unawares the society found itself carrying out a broad educational scheme which embraced a large portion of the intelligent part of the community. The opera house was secured for a course of lectures, a stereopticon and slides were rented, and all available local talent—clergymen, lawyers, and teachers of the city—pressed into service as lecturers. Season tickets were sold at \$1 each, entitling the holder to 20 lectures, illustrated by from 20 to 50 views, at an expense of 5 cents for each lecture. Single tickets were sold at 50 cents each, and, though the expense of the course amounted to nearly \$400, the circle closed the season free of debt. Increased interest in the lectures was manifested as the season advanced, and many weary and burdened men and women came to look forward to the lecture evening as the one bright spot in their lives. The influence upon the community was very marked, and the members of the circle were so encouraged by their success that a similar plan for the study of the British Isles was suggested for the next year. The undergraduate circle worked heartily with their comrades in pushing the enterprise, at the same time keeping up their regular meetings, while the graduates met once a week and studied up the topic for the coming lecture."

#### GRADUATE MEMBERSHIP IN 1895.

Writing in August, 1895, Miss Kimball said:

"The graduate membership of the C. L. S. C. now exceeds 35,000, and, while many of these have naturally drifted into other lines of work, a large number are interested in the C. L. S. C. special courses, and in many communities graduate circles exert a wholesome influence in educational affairs."

#### CHAUTAUQUA EXTENSION AND THE C. L. S. C.

A remarkable adaptation of university extension methods to the local work of the Chautauqua literary and scientific circles is described by Miss Kate F. Kimball in her report for 1892-93 (see Chautauqua Assembly Herald, August 24, 1893):

"A new phase of C. L. S. C. work was introduced during the winter of 1892-93 as a sort of experiment in the general line of university extension, although disclaiming entirely so ambitious a title.

"The modified plan, known as the 'Chautauqua extension,' did not originate in America, having been first attempted in Great Britain, without, however, resulting in the same degree of success which has been accorded to it here. The details of the plan as carried out during the winter of 1892-93 by the Chautauqua Circle included a single course of six lectures on Greek social life, prepared by Prof. Owen Seaman.

The lectures were a modification of a similar course which Professor Seaman had delivered at Chautauqua with great acceptability during the summer of 1892. Each lecture was printed separately in large, clear type, the course including the following topics:

- "1. Introductory.
- "2. Religious beliefs and ritual.
- "3. Home life—Dress—Status of women.
- "4. Marriage customs—Rites of burial—The great games.
- "5. The games (continued)—The theater.
- "6. The slave question—Public life—Conclusion.

"Any community proposing to give the course of lectures was provided with as many announcements for general distribution as were desired, course tickets to be sold at 50 cents each, and a 16-page syllabus for every ticket holder. The syllabus contained a full outline of each of the 6 lectures, a list of recommended books, a set of questions to be used as a quiz, and several illustrations to elucidate the character of the Greek dress as set forth in one of the lectures.

"By this arrangement as many as possible of the essential features of the university extension idea were carried out—namely, the lectures and syllabus prepared by a university extension lecturer, and opportunities for a quiz and an examination. The only essential feature which was lacking was that of the personal presence of the lecturer himself, and it was the elimination of this feature which made it possible for many small communities to reap the advantages of the university extension idea in other respects. The expense of the course was so adjusted that no community undertaking the scheme incurred any financial risk. One-half of the gross receipts from the sale of course tickets at 50 cents each (the whole amount in no case to exceed \$25) was all that was required by the Chautauqua office. This arrangement made it possible for a small community which could not sell more than 20 tickets to give the course in a parlor, incur no expense whatever, and secure a fund of \$5 for the purchase of books, maps, or other helps of value to a reading circle.

"Nearly 70 courses were given, and it is interesting to note the practical workings of the plan. The problem of a lecturer was solved in various ways, according to the opportunities offered by the community.

"Pastors and high-school principals gladly gave their services, and in one town the professors in the theological seminary presented the lectures. In Denver, Colo., a professor at the State University took charge of the course, a large number of tickets were sold, and the circles were able to secure the use of a lantern and of a rare collection of Greek views. A home-missionary circle in Connecticut gave the lectures as a parlor course, and netted \$12.50 for the desired object. In a town in southern New Jersey the lectures were given in the parlors of a hotel, and with such success that application was made for 30 examination papers.

"From a town in New York State, where the lectures were delivered in the Congregational Church, the pastor sent an interesting report. He wrote: 'We have given three of the lectures in the Chautauqua extension course, which was inaugurated by the West Side C. L. S. C., and it has been a source of gratification that we have found 70 who would purchase course tickets. Our city can barely sustain a popular lecture course once in three or four years. This kind of work, if continued, will furnish a constituency for that, as well as for university extension. We have two papers read each evening from the questions in the syllabus of the preceding lecture, and our hour is voted all too brief.' In a town in Ohio, where men and women of special ability were invited to conduct the quiz, this part of the lecture is reported as especially valuable and interesting. One more report will show how the plan was carried out in a large city church in Pennsylvania. The report came from the pastor of the church, who was the leader of the circle: 'I write to let you know of the great profit and enjoyment afforded the Whittier Circle of the C. L. S. C. by the lectures on Greek social life. The lectures themselves are written in popular vein, and, while showing research and familiarity with the subject, are such as the ordinary outsider enjoys, while to the Chautauquan in this Greek year they are a delight. Last evening our programme consisted of music, lecture third on Greek costume and domestic life, followed by a most interesting quiz, not of the audience, but of a local artist who goodnaturedly consented to answer any question we might thrust at him concerning Greek costumes or modern dress as related to art in sculpture or in painting. A very lively half hour spent in the exercise brought to a close a most interesting and helpful evening. We congratulate you upon the whole plan of these lectures, and hope that the system may be extended.'

"The plan was not confined to a limited area, but was tested in no less than 27 States, in communities numbering from a few hundred to many thousand inhabitants, and has proved itself capable of filling so real a need that additional courses have been arranged for the season of 1893-94. These will include, in addition to the course on Greek life, 6 lectures on the poetry of Robert Browning by Prof. Owen Seaman, 6 lectures on social science by Prof. A. W. Small, of the University of Chicago; 3 lectures on great periods of mediæval history and art by Prof. William H. Goodyear, of the Brooklyn Institute, and 6 lectures by President William R. Harper, of the University of Chicago, on prophecies concerning the fall of Jerusalem. The whole plan fits in admirably with the C. L. S. C. courses of reading, since non-Chautauquans can be induced to take up a part or all of the C. L. S. C. course as a preparation for the lectures, while regular C. L. S. C. students find that the course admirably supplements their work."

In her report of progress for 1894-95 Miss Kimball says:

"The Chautauqua system of 'read lectures' has been continued with marked success during this, its third year. Nearly 40 courses were

given in as many cities and towns. The social science lectures proved, as usual, the most popular of the series. The pastor of a Congregational church in Wisconsin wrote of this course: 'The lectures have been a great help to me, and I believe a great help to my people. I can not commend them too highly; they have enlisted a good deal of interest, and my church has been crowded.'

"In Paterson, N. J., the literary committee of the Epworth League, in cooperation with the church organization, gave the course with great success. The pastor of the church wrote: 'The course is producing a marked impression.' Under the auspices of a Congregational church in Pittsfield, Mass., the course was given during the winter with an attendance of nearly 100. The lectures were so much appreciated that they were also utilized by a workingman's club in connection with a factory district. A social science club of 19 men took the 6 lectures as the basis of their winter's study and discussion. In addition to this series, courses on great periods of mediæval history and art and on the poetry of Robert Browning have found an appreciative hearing. A club of high-school teachers in Minnesota used the lectures for club work instead of giving them as a regular course. In New Hampshire a company of ladies belonging to a magazine club used first the course on Greek social life and met with so much success that they followed it with the social science lectures. The members of the club came together from quite widely scattered country homes, and in spite of inclement weather the interest was maintained to the close, and papers showing much careful thought were presented by several members. In Montana the Episcopal, Methodist, and Presbyterian ministers are combining their churches and people in the interest of social science, and the "Friends in Council" of Berlin, Wis., write that the Browning course has given great pleasure as well as profit. Churches, clubrooms, and private parlors have been utilized, and many different organizations have tried the plan on a greater or less scale. The New Century Club, of Utica, N. Y., used the social science course for a group of 20. A similar number took the course under the auspices of a political equality club in Iowa. The Doane College Y. M. C. A., in Nebraska, had an average attendance of 60. In Lancaster, Pa., the course was given in the interest of a proposed club for studies in municipal government. Other courses were given by Chautauqua circles, Epworth leagues, or under general church auspices. The plan seems to possess great possibilities, and other courses will undoubtedly be added in the near future."

#### OPINIONS OF THE C. L. S. C.

[Principal A. M. Fairbairn, of Mansfield College, Oxford, England.]

The C. L. S. C. movement seems to me the most admirable and efficient organization for the direction of reading and, in the best sense, for popular instruction. To direct the reading during a period of years for so many thousands is to affect not only their present culture but to

increase their intellectual activity for the period of their natural lives, and thus, among other things, greatly to add to the range of their enjoyment. It appears to me that a system which can create such excellent results merits the most cordial praise from all lovers of man.

[Rev. Dr. Jesse L. Hurlbut, of New York.]

The C. L. S. C. leads each of its members to read the equivalent of 15 books of 300 pages each every year, or 60 volumes in four years. Any institution which leads a great multitude of people each year to read this amount of good, thoughtful, uplifting literature has brought an invaluable blessing to the age.

[President W. R. Harper, of the University of Chicago.]

I think there can be but one opinion regarding the influence of the C. L. S. C. movement. It seems to me the most powerful and far-reaching of the popular educational forces of this country. It stands alone, and must everywhere be acknowledged to be an admirable agency for general culture among all thinking classes throughout the land.

[John Fiske.]

I have always been very heartily in sympathy with the movement. It brings certain people in relations with the literary and scientific world which they could not possibly maintain without such assistance. As a stimulating and suggestive agency toward mental culture I regard it as admirable, and I am convinced it has not been equaled by any other system of popular education.

[Hamilton W. Mabie, editor of the Outlook.]

The characteristic which distinguishes the American who has not enjoyed the advantages of a high intellectual training from men of his class in Europe is his aspiration. This must be wonderfully stimulated by an educational agency so comprehensive as the C. L. S. C. It is, in my opinion, an exceedingly efficient force for directing intellectual system in planning one's life.

[Prof. Albert S. Cook, Yale University.]

No agency for the diffusion of education among adults is so effective, in my judgment, as is the C. L. S. C. There is no one beyond its reach, and few, in proportion, are they who would not be helped by following the course.

#### COLLEGE OF LIBERAL ARTS.

The highest development of Chautauqua is seen in her College of Liberal Arts. This institution stands upon the highest land of her broad domain of 225 acres. It is a breezy summerhouse built in a Moorish style of architecture, and looks out upon Chautauqua Lake and the charming hillside landscape beyond. The site is a veritable acropolis for natural beauty.

The interior of the college building is simple and unfinished except with a library, an open fireplace, chairs, and long tables. The plain class rooms, with their desks and blackboards, are good enough for summer work. The long door-like windows open directly from the ground floor upon the piazzas, and the students never complain of bad air, as they often do in American colleges and German universities.

The Chautauqua College of Liberal Arts is a historical outgrowth of the Normal School of Languages, first opened in 1879, the same year as the teachers' retreat. At first each school of language was independent of all the rest, but they are now coordinated with other subjects into one institution, embracing various special departments, with professors borrowed from the various colleges and universities. For example, in the summer of 1894 the schools were organized as follows:

1. *English language and literature.* (Profs. A. S. Cook, of Yale, and R. G. Moulton, of Chicago.)—Courses were given in July and August of 1894 in Old English (5 hours a week), Tennyson (5), Browning (5), with interpretive studies in Spencer and Milton (5). For many years the English department at Chautauqua was most successfully conducted by Prof. W. D. McClintock, a former pupil of Professor Cook at the Johns Hopkins University. They are both experienced Chautauquans.

2. *German language and literature.* (Prof. Henry Cohn, of the Chicago School of Languages.)—Various classes were well conducted: Beginning German (10 hours), intermediate German (10), advanced German (5), six German lectures on Faust, scientific German for advanced students. A German club was maintained for conversation, singing, and dramatic entertainment. A German table was provided at one of the cottages. The whole department impressed me as very efficient and well directed. Under such excellent guidance a faithful student could make wonderful progress in German in six weeks.

3. *French language and literature.* (Prof. A. de Rougemont, Adelphi Academy, Brooklyn.)—Beginning French (10 hours), intermediate French, advanced French (with French composition), Cercle Français (outdoor class for French conversation), French lectures. Long experience at Chautauqua has tested and approved this practical and scholarly work.

4. *Preparatory Latin.* (Prof. F. J. Miller, University of Chicago.)—Beginning Latin (10 hours a week by the inductive method), Virgil (5), teachers' advanced training course (5 hours, with sight reading and topical studies of syntax). Professor Miller is an experienced Chautauquan, and is very successful in his methods of work, which combine the best features of construction and analysis.

5. *Preparatory Greek.* (Prof. W. E. Waters, University of Cincinnati, president of Wells College, Aurora, N. Y.)—Beginning Greek (10 hours a week, inductive method), Anabasis (10).

6. *Physics*. (Prof. J. H. Montgomery, Allegheny College.)—General physics (3-hour lectures, with laboratory work), electricity (2).

7. *Chemistry*. (Prof. L. H. Batchelder, Hamline University, St. Paul, Minn.)—Systematic chemistry (10, lectures with Remsen's introduction), qualitative analysis (10), quantitative analysis, organic chemistry (text-book, Remsen).

8. *Geology*.—For many years this department has been most successfully conducted by Prof. Frederick Starr, of the University of Chicago, the eminent specialist and experienced lecturer in anthropology. In the summer of 1894 his place was taken by Miss Anna A. Schryver, of the Teachers' College, New York.

9. *Biology*. (Dr. H. P. Johnson, Des Moines College.)—Elementary zoology (10), advanced zoology (10).

10. *Mathematics*. (Prof. William Hoover, Ohio University, Athens, Ohio.)—Algebra (5 hours), geometry (5), trigonometry (5), analytical geometry (5), differential calculus (5), astronomy (5).

11. *History and political science*. (Profs. George B. Adams, Yale; H. B. Adams, Johns Hopkins; H. E. von Holst, Chicago, and Bernard Moses, California).—Outlines of mediæval history (5 hours for 3 weeks, G. B. Adams, with 5 public lectures on English colonization and empire), history of Prussia (5 hours for 3 weeks, H. B. Adams, with 5 public lectures on political revolutions of the nineteenth century), history of France during the restoration (5 hours for 3 weeks, H. E. von Holst, with 2 public lectures on "Utopia" and "Should the United States Senate be abolished?") principles of politics (5 hours for 3 weeks), and Spanish economic and political administration in America (5 hours for 3 weeks, B. Moses, with public lectures on South American history and other subjects). The above work, collectively, was called the "Specialized department for 1894," and represents an earnest attempt on the part of the college to promote class work as well as popular interest in the allied subjects of history and politics.

12. *Economics and social science*. (Profs. R. T. Ely, University of Wisconsin; J. R. Commons, University of Indiana; C. R. Henderson and George E. Vincent, both of University of Chicago.)—Money (5 hours for three weeks, R. T. Ely, with 6 public lectures on private property), political economy (5 hours for 3 weeks, J. R. Commons), introduction to the study of society (5 hours for 6 weeks, G. E. Vincent), social pathology and its place in general sociology (4 hours for 3 weeks, C. R. Henderson, with public lectures upon social problems).

The reader of this condensed programme will doubtless be surprised at the extent, character, and variety of the class courses offered at Chautauqua during the six-weeks summer season. The classes in English and the modern languages are the largest. The classics also draw a good number of students and are very helpful to teachers and young men preparing for a regular college course. The laboratory and library facilities are hardly adequate to existing needs, although upon

request special collections of books are now loaned to Chautauqua from the State library in Albany by the board of regents, who are fostering local lectures by lending so-called "traveling libraries," each in its own bookcase. At Chautauqua in one season there were such special loan collections of books for the study of French history, United States history, political economy, and English literature.

In addition to the regular class work the departments of literature, history and politics, and economics and social science always offer to the Chautauqua public short courses of popular lectures, very often upon the same general themes as are treated in class rooms at the college. This policy helps to defray the cost of college lecturers by charging their public services to the general programme of the assembly, and it also helps to increase and strengthen the college classes and gives their work and lecturers a healthy popularity. If college professors everywhere could be thus utilized occasionally for public purposes, it would benefit them personally and undoubtedly improve the character of their class instruction, for oftentimes the public standard of excellence is higher than the professor's private standard in the class room.

The Chautauqua College of Liberal Arts is not and never can be a financial success. It will always need aid and support from the General Assembly, but the college is doing work at once honorable and helpful to the larger Chautauqua. The college has greatly improved the general tone of the place, and has given better methods and greater continuity to the more popular forms of instruction in the hall of philosophy and the great amphitheater. A higher standard of public entertainment has become necessary, and even the Sunday-school work feels the stimulus of acknowledged leaders like Dr. Harper and his corps of assistants from the college world. Chautauqua is now developing new life in its original field of instruction.

The cost of tuition in any one department at the college is \$5 for the summer session. No student is allowed to take studies in more than two departments without special permission from the principal. History and political science count as one department, and so do economics and social science.

It should be distinctly understood that the College of Liberal Arts is quite distinct from the Chautauqua literary and scientific circles and from the teachers' retreat. The province of the latter is to teach educational methods. The C. L. S. C. attempts to give a general outlook upon the world of literature and science by means of systematic courses of reading in English. The college is a long step forward from these beginnings. The college has introduced classical and other linguistic courses, including French and German. The reading circles are still under general direction through correspondence with a central secretary. The college has distinct departments, each under individual direction. In the local circles intellectual stimulus comes from the contact of members and from joint discussion, as well as from private

reading. In the college there is direct contact between special students and individual instructors in lecture or laboratory courses during the summer session of six weeks. Afterwards, if the student desires it, there is careful supervision of home studies along specific lines by means of correspondence, written reports, or examinations at least once a month.

#### SPECIALIZED DEPARTMENTS.

Chautauqua has always laid particular stress upon biblical studies, teaching, and lectures, and ancient and modern languages. In recent years special attention has been given to history, politics, economics, and English literature. In the summer of 1894 representatives were engaged from the historical departments of the following universities: California, Chicago, Yale, and Johns Hopkins; and earnest efforts were made by the management to give the study of European and American history a prominent place in the Chautauqua system.

Whatever may have been the practical results at the summer school, it is now clearly manifest that history is the prevailing element in most of the Chautauqua reading courses, and rightly so, for history represents the real life and experience of mankind. Matthew Arnold omitted the most vital element of human culture when he defined it as a knowledge of the best that has been thought and said in the world. He should have added the best that has been done. It is not thinking and saying merely; it is doing that makes culture possible and life worth living. History is the knowledge of man's deeds. "Be ye doers of the word, not hearers only."

Next in importance to law and religion and other forms of historical and political science, upon which all good government and the very life of society depend, come literature, art, and natural science. Chautauqua has rightly given more prominence in her system of popular culture to historical, intellectual, and religious things than to material nature. This is the way in which mankind has made progress out of savagery, and along this ancient pathway of law, religion, philosophy, and letters every new generation of man must walk. Man has conquered nature by his deeds, his works, and his inventions, but he is always seeking new worlds to conquer in the domain of ideas, of art, literature, and science. The true, the beautiful, and the good are gradually revealed to him in fields of observation, expression, and conduct.

It will be a long time before first-rate, popular work can be done in natural science except, perhaps, in summer laboratories by the seaside, but Chautauqua has made good beginnings in observational study. It has provided modest, inexpensive laboratories for physics, geology, chemistry, and biology. Very superior instruction in the historical science of anthropology has been given at Chautauqua by Professor Starr, now of the University of Chicago.

By far the best specialized department at Chautauqua is that of English literature. Begun years ago in scholarly but popular ways by Prof. Albert S. Cook (before his connection with Johns Hopkins, California, and Yale universities), developed by his Hopkins pupil, Prof. W. D. McClintock, it reached in the summer of 1895 its highest success. The combination of special talent then brought together for teaching English, one of the noblest studies in the world, is indicated by the following names, which speak for themselves to those who know: Professor Cook, of Yale; Professor Winchester, of Middletown, Conn.; Professors Moulton and Lewis, of the University of Chicago, and Professor Sherman, of the University of Nebraska.

#### STATISTICS OF THE COLLEGE, 1894.

At the closing exercises of the College of Liberal Arts, August 15, 1894, Chancellor Vincent gave the following statistics for the summer session of that year:

The total number enrolled was 405, represented in the various departments as follows: Latin, 83; English, 75; German, 66; French, 50; mathematics, 39; history, 31; Greek, 27; economic and social science, 15; physics, 11; chemistry, 11; biology, 8; Hebrew, 13; geology, 5.

The States and countries represented were, Maine, 2; Massachusetts, 6; Vermont, 1; Connecticut, 2; Rhode Island, 2; New York, 103; Pennsylvania, 57; New Jersey, 6; Ohio, 41; Maryland, 8; Delaware, 2; District of Columbia, 3; Virginia, 2; West Virginia, 3; North Carolina, 2; South Carolina, 2; Georgia, 2; Louisiana, 2; Alabama, 2; Mississippi, 7; Texas, 7; Tennessee, 5; Kentucky, 8; Arkansas, 2; Missouri, 2; Indiana, 8; Illinois, 28; Michigan, 9; Minnesota, 9; Iowa, 6; Wisconsin, 5; Colorado, 1; Kansas, 1; Indian Territory, 1; Nebraska, 3; North Dakota, 2; California, 1; Canada, 4.

The occupations represented were: Teachers, 217 (distributed as follows: In preparatory schools, 189; in colleges, 28); students, 71 (distributed as follows: In preparatory schools, 32; in colleges, 39); ministers, 9; music teachers, 5; bookkeepers, 4; tradesmen and business men, 5; professional men other than ministers, 3; missionary, 1.

The religious denominations represented were: Presbyterian, 92; Methodist Episcopal, 77; Protestant Episcopal, 51; Congregational, 41; Baptist, 28; Friends, 7; Reformed, 7; Lutheran, 6; Unitarian, 6; United Presbyterian, 6; Christian, 5; Disciples, 3; Roman Catholic, 2; Independent, 2; Swedenborgian, 2; Universalist, 1; United Brethren, 1; Free Baptist, 1.

Institutions represented by teachers or students were: Wellesley College, Princeton College, Northwestern University, Cornell University, Oberlin College, Ohio University, University of Illinois, University of Chicago, Lake Forest University, Bryn Mawr College, Yale University, Allegheny College, The Teachers' College (New York), McKendrie College, Cedarville College, Blue Mountain College, Temple College,

Ripley College, Hobart College, Indiana Normal College, Central College, Woman's College of Baltimore, Woman's Medical College of Pennsylvania, Monongahela College, Belmont College, De Mile College, Weatherford College, Benzonia College, Westminster College, Lindenwood College, Guilford College, Rogersville Synodical College, Hope College, Mississippi College, United Presbyterian Theological Seminary, Columbia College, Berea College, Harbord College (Toronto), Franklin College, Trinity College, Talladega College, Allentown College, and others.

The principal degrees held by the students were: Ph. D., 1; A. B., 45; A. M., 34; B. S., 6; B. L., 5; B. Ph., 4; B. E., 3; M. E., 3; Ph. M., 1; LL. B., 1; M. E. S., 1; B. E. S., 1; M. L., 1; D. D., 1; Pd. M., 1; Pd. B., 1; M. E. D., 1; M. S., 1.

Eighty-five students had attended the Chautauqua schools in previous years; 43 persons had attended other summer schools; 28 were members of the correspondence college, and 67 were members of the C. L. S. C.

#### THE SEASON OF 1895.

The sessions of the Chautauqua College of Liberal Arts closed in the open air with, as Chancellor Vincent said, the benediction of the sunshine upon it. The season of study here was marked by two most encouraging features. The attendance has been greater than ever before, and the earnestness and willingness to work shown by the students have won the warm approval of every teacher. Of the 2,000 pupils at work here this season in all departments of the college and special schools, 451 were in the College of Liberal Arts. They were distributed among the different departments as follows: English, 130; German, 84; Latin, 72; French, 67; Greek, 31; mathematics, 30; art history, 20; chemistry, 10; sociology, 10; physics, 9; American history, 10; biology, 9; philosophy, 2, and general, 25. The largest enrollment ever reached in previous years in the college was 425 in 1892.

The States and countries represented were as follows: New York, 96; Pennsylvania, 95; Ohio, 48; Illinois, 26; New Jersey, 21; North Carolina, 12; Georgia, 8; Connecticut, 8; Massachusetts, 7; Minnesota, 7; Virginia, 7; Maryland, 7; Kentucky, 7; Missouri, 5; Tennessee, 6; South Carolina, 4; Wisconsin, 4; Indiana, 4; Iowa, 4; District of Columbia, 4; Kansas, 3; Florida, 3; West Virginia, 3; Texas, 3; Mississippi, 2; Michigan, 2; Oregon, 2; Vermont, 2; North Dakota, 2; Alabama, 1; New Hampshire, 1; Colorado, 1; California, 1; Montana, 1; Nebraska, 1; Rhode Island, 1; Canada, 3; Africa, 1.

The occupations represented were: Teachers, 215 (distributed as follows: In colleges, 35; normal schools, 17; high schools, preparatory schools, seminaries, and institutes, 71; public schools of lower grade, 57; private schools of lower grade, 20; kindergarten, 3; music, 2); students from other institutes, 53; ministers, 8; librarians, 2; private secretary, author, physician, surgeon, broker, lawyer, civil engineer,

steamboat engineer, druggist, clerk, reporter, missionary, grocer, each 1 representative.

Religious denominations were represented as follows: Presbyterian, 105; Methodist, 70; Baptist, 30; Congregational, 24; Episcopalian, 41; United Presbyterian, 10; Friends, 5; Independent, 3; Universalist, 2; United Brethren, 3; Lutheran, 6; Reformed, 4; Unitarian, 5; Jewish, 1; Mennonite, 1; Roman Catholic, 5; Disciples, 4; Cumberland Presbyterian, 2; Reformed Presbyterian, 2; Seventh-Day Baptist, 1; Methodist Episcopal South, 1; English Lutheran, 1.

Collegiate institutions represented by students were: Yale University, University of the City of New York, University of Chicago, University of Pennsylvania, Cornell University, University of Denver, Lake Forest University, Illinois Wesleyan University, Vanderbilt University, Washington University, Allegheny, Bucknell, Westminster, Buchtel, Bethany, Rollins, Beloit, and Mount Holyoke colleges, and the Woman's College of Baltimore.

Fifty-two of those in attendance studied in other summer schools in former years, 99 were college graduates, and 32 have taken a second degree; 53 were graduates of normal schools, 23 were members of the Chautauqua Correspondence College, and 40 were members of the C. L. S. C.

#### CORRESPONDENCE SYSTEM.

The correspondence system of college teaching is based on (1) printed instructions sent out by the department in which the student has chosen to work, (2) on skillfully constructed examination papers which test the student's understanding of what he may have read, and (3) on written answers or reports sent in to the department at least once a month and then carefully corrected and returned to the student. The system develops independence of character, habits of investigation and self-help, and the power of accurate and exact statement on the part of the pupil. It necessarily involves thoroughness of preparation and complete command of the entire month's work, which has covered the ground of what would ordinarily occupy many recitations in a class. Class work, although undoubtedly superior, has its evils, as every college student well knows. The oral recitation is hurried and covers for each individual only a narrow range of knowledge. In large classes students are infrequently called up, and when they have recited they sometimes become inattentive and take a long mental rest before beginning to calculate the probabilities of another call. It is usually thought by students and instructors that written examinations are, on the whole, the best and fairest all-round test of a man's ability and attainments. Such severe trials of the knowledge of the pupil and of the patience of the teacher are these written examinations that they are not generally resorted to more than once or twice a term; in fact, under the old college régime only once a year, in the dreaded "annuals." It should be remembered that the correspondence system requires at least

monthly written examinations from October to June. These are rarely if ever taken by persons who have shirked their duty, who have crammed and cribbed for a special test, or who are disposed to cheat in the absence of a proctor. Correspondence students are generally persons of mature years, who are very much in earnest, and who have studied for self-improvement or a genuine love of the subject rather than for a diploma or for class rank.

Of course the correspondence system is no adequate substitute for the constant drill, perfect regularity, personal supervision, suggestive power, active stimulus, and generous rivalry of class-room work in the very sight and hearing of a vigorous and enthusiastic instructor day after day and throughout four years. No sane man would ever think of advocating education by correspondence as superior to education by contact. It is for the very sake of establishing personal relations between master and pupil, between the individual and society, that the summer session of the Chautauqua College of Liberal Arts was devised. Although a six-weeks course of lectures and of class work seems very trifling as compared with the thirty-six or more weeks of the college year, it should be remembered that one college lecture or one sermon is sometimes enough to determine a life choice. If a college professor can sometimes strike sparks of intellectual light in fifty minutes, he ought to be able to kindle some sort of a fire in a course extending from three to six weeks. If a man's scientific career, like that of Prof. Joseph Henry, once secretary of the Smithsonian, is sometimes determined by the reading of a single book, "although by no means a profound work," as he himself admitted, it is possible that the suggestion of a course of good reading for an earnest student at Chautauqua may bear rich fruit in coming years. Many a university student in Germany, England, and America will admit that the best results of a professor's teaching are introductions to special literature and to new vistas of scientific interest. Many a doctor of philosophy, returning from years of foreign note taking, has left his voluminous notebooks unused and has sought fresh knowledge and inspiration in books recommended by his professors or in more recent literature.

Finally, it should be borne in mind that the Chautauqua correspondence system is designed for those and for those only who, by the force of circumstances, are prevented from attending a regular college. As Principal Harper truly says: "There are thousands of men and women unable to avail themselves of oral assistance who, nevertheless, are eager to study. It is surely an advantage of the correspondence system that it can aid this large class who otherwise would have no help and would make no progress."

#### CERTIFICATES AND DEGREES.

Upon the completion of the four-years course of reading in the Chautauqua Literary and Scientific Circle a certificate to that effect is awarded. This certificate is not a college diploma and "has not the

remotest connection with a degree." (Official report to the regents of the University of the State of New York, 1891.) The Chautauqua idea is to encourage people to pursue continuous courses of reading. In recognition of work of special merit, as indicated by the individual reports or memoranda returned by pupils to the central office, special seals are attached to the above certificate. To graduates of the C. L. S. C. are offered advanced courses of private reading, in connection with a syllabus prepared by some good authority. Seals are given for this work also, and a good Chautauquan may carry on privately special studies for many years; but these so-called "seal courses" do not lead to any final degree. They are simply advanced reading courses which satisfy a growing demand for opportunities of specialization in history, literature, or natural science after the student has enjoyed a four-years general outlook through the C. L. S. C.

By the charter granted in 1882 by the regents of the University of the State of New York Chautauqua has the degree-giving power, but she has shown no disposition to abuse the privilege. "No honorary degree has been or can be conferred under the rules of the board of trustees." But they may confer ordinary college degrees through the College of Liberal Arts, although this is rarely done and never except in cases absolutely worthy of recognition. Department work, begun at Chautauqua in the summer season, is sometimes continued throughout the year under the direction of college professors, who employ circular letters of instruction, with frequent written examinations upon assigned reading. This is usually guided by a syllabus of topics, with the aid of standard text-books and works of reference, chiefly helpful in historical and literary courses. Laboratory courses are more difficult to secure.

All candidates for degrees are now examined by the regents of the University of the State of New York. Sixteen full courses are required after admission to the college for any baccalaureate degree. The following ten courses are prescribed: Latin, Greek, German or French, mathematics, English, history, mental science, political economy, one course in physical science, one course in biology. Six electives, subject to approval, may be chosen in regular departments. Not more than two courses from one department may be counted toward a degree. A single course is regarded as equivalent to ten hours' study a week. The number of circulars of instruction sent out in each course varies with different instructors; but in all cases the lessons cover enough ground for thirty-two weeks of serious work in one subject. Written examinations of a searching character occur at monthly, fortnightly, or weekly intervals, according to the nature of the subject. Such written tests are more thorough and satisfactory than the usual infrequent oral recitations of lazy students in large classes. Chautauquans are generally earnest, faithful, and conscientious. They have no desire and no motive to shirk.

Before the completion of any department course a written examination is required covering the entire work. A certificate is then given by the college examiner and the registrar to the successful candidate. Sixteen such certificates entitle him to the degree of bachelor of arts, bachelor of philosophy, or bachelor of science, according to his combination of studies. Latin and Greek are both required for B. A.; Latin and German or French for B. P.; three modern languages for B. S., besides such literary, historical, and scientific courses as those above mentioned.

Under such conditions as the Chautauqua College of Liberal Arts imposes very few degrees will ever be won, but when won they will represent more honest work and higher attainments than many a college diploma awarded in course or by academic grace. In 1894 only two college degrees were awarded by Chautauqua: One B. S. to Mrs. H. L. McChesney, of Albion, N. Y.; and one B. A. to F. B. Waite, of Wyoming, N. Y., who had been three years at Hamilton College, and who, for extra work, received the same degree from his alma mater. In some summer seasons at the Chautauqua College of Liberal Arts as many as one-quarter of the entire number of students enrolled have already received college degrees from well-known institutions. Chautauqua University is already a school for college graduates as well as for the people.

#### SCHOOLS OF SACRED LITERATURE.

In connection with the college and in cooperation with the American Institute of Sacred Literature (directed from Chicago by Dr. W. R. Harper) are the summer schools of sacred literature at Chautauqua. Considered as a special department of the college, the schools of sacred literature are by far the strongest and best patronized. In the season of 1894 some 200 students were enrolled for biblical studies. Adding this number to the 405 registered in the other 12 departments of the college, we have a total of 607. The registration fee in the English Bible schools is only \$1. Regular tuition for the class study of Hebrew or Greek is \$5, the same charge as in each of the college and most of the special departments.

In the schools of Hebrew and the Old Testament and of the New Testament Greek a large number of practical linguistic courses are given, all more or less upon the inductive method, which, under Principal Harper's leadership, runs through all the schools of language at Chautauqua. With Dr. Harper is closely associated in the teaching of Hebrew Prof. D. A. McClenahan, of the United Presbyterian Theological Seminary, Allegheny City, Pa., and Dr. W. W. Moore, the well-known biblical scholar of Hampden-Sydney. The teaching of New Testament Greek is chiefly done by Prof. Charles Horswell, of Northwestern University, Evanston, Ill.

The general subjects taught in the schools of sacred literature for six weeks are: (1) The Bible in English; (2) the Bible in Hebrew and

Greek; (3) biblical literature; (4) biblical history; (5) biblical theology; (6) the Hebrew language; (7) New Testament Greek. The specific themes of instruction vary somewhat from year to year. In the English Bible school the work is sometimes centered upon the Pauline Epistles. During the summer session of 1894 the entire work was concentrated upon Jesus, the Messiah. Principal Harper lectured upon Messianic Prophecy; President George S. Burroughs (formerly of Amherst College, now president of Wabash College) reviewed the political, social, and religious aspects of the Times of Christ; Prof. Charles Horswell, the Historical Life of Christ; Rev. O. C. S. Wallace, of Toronto, the Teachings of Christ. All this class work was carried on in the morning hours in the college chapel, and was well calculated to train students and teachers for efficient cooperation in Sunday schools, where lately the international lessons have been specializing upon the Life of Christ.

A very interesting and instructive aspect of the work of the English Bible school is the popular presentation in the amphitheater on Sunday morning at 9 o'clock of "Bible studies" and "Bible lectures," each complete in itself, by eminent specialists. In the whole work of Chautauqua nothing impressed me more profoundly than those enlightened expositions of Hebrew prophecy and Hebrew thought by Principal Harper. Professor Horswell's lecture on St. Paul was also wonderful for its historical insight and spiritual illumination. Prof. R. G. Moulton's Interpretive Recital of Job attracted a large, sympathetic audience. Anybody who doubts the educational value and social expediency of critical and dramatic presentations of religious subjects should go to Chautauqua and attend a Sunday morning class in the amphitheater, or, on a week day, see and hear Professor Moulton present a noble Greek drama like *Alcestis*. Through Macmillan & Co. he is now issuing the *Modern Reader's Bible*, a series of handy little volumes presenting the sacred scriptures in modern literary form. Matthew Arnold conceived the same idea in his school edition of *Isaiah*, but he did not carry it out so practically and so fully as Professor Moulton has done.

#### HIGHER CRITICISM AND STATISTICS.

At the closing exercises of the Chautauqua schools of sacred literature, August 15, 1894, Chancellor Vincent said that the so-called higher criticism may seem, by emphasizing the human elements in the Bible and in the processes producing the Bible, to weaken its divine authority, but that in reality it brings the Bible itself and the divine life in it nearer to the human heart.

Chancellor Vincent read the following statistics with relation to the schools of sacred literature, which will prove of general interest. The total number of students enrolled was 200, and the largest attendance 181. Many States and countries were represented by the students. The following is a brief summary: Connecticut, 6; New York, 42; New

Jersey, 6; Pennsylvania, 47; Ohio, 18; Delaware, Maryland, Virginia, West Virginia, and Massachusetts, 2 each; North Carolina, 3; Georgia, 6; Mississippi, 1; Texas, 1; Florida, 2; Tennessee, 4; Kentucky, 12; District of Columbia, 1; Michigan, 8; Illinois, 8; Minnesota, 3; North Dakota, Iowa, Wisconsin, Kansas, Indian Territory, California, Mexico, and Africa, 1 each; Missouri, 3; Indiana, 7; Canada, 4; China, 9.

There were 15 denominations represented in the schools, the Presbyterian standing first and the Methodist Episcopal next. The following is the representation: Presbyterian, 61; Methodist Episcopal, 46; Baptist, 18; Congregational, 25; Episcopal, 15; Friends, 7; Disciples, 5; Reformed, 4; United Presbyterians, 3; Lutheran, 2; Methodist Episcopal South, 2; Universalists, 2; Cumberland Presbyterian, Free Will Baptists, and Unitarian, 1 each.

There was a wide range of occupations represented by the students. There were 55 teachers in secular schools, 18 clergymen, 8 students, 3 business men, 3 missionaries, 2 evangelists, 2 Y. M. C. A. secretaries, 1 Bible teacher, 1 physician, 1 lawyer, 1 theological student, 1 music teacher, 1 dressmaker, 1 domestic, and 1 professional nurse. The remainder were women engaged in home duties. Exclusive of ministers only 21 of the 200 members enrolled had completed previously any special course of Bible study.

#### THE SCHOOLS OF SACRED LITERATURE IN 1895.

The total enrollment was 195, distributed as follows: English Bible, 178; Hebrew, 12; New Testament Greek, 5.

Twelve States were represented, as follows: New York, 49; Pennsylvania, 32; Ohio, 20; New Jersey, 10; Illinois, 7; Massachusetts and Georgia, each 6; Kentucky, 5; Florida and Virginia, each 4; Connecticut, Indiana, North Carolina, Minnesota, and Tennessee, each 3; Wisconsin, District of Columbia, and Iowa, each 2; Alabama, Colorado, Delaware, California, Kansas, Mississippi, Utah, Texas, West Virginia, Ontario, and Hawaiian Islands, each 1.

The occupations represented were: Teachers, 26; ministers, 14; students, 8; missionaries, 7; at home, 12; kindergartens, 2; clerks, 3; professors, 2; banker, lawyer, merchant, general secretary Y. M. C. A. and Y. W. C. A., superintendent city missionary work, and musician, each 1 representative.

Religious denominations were represented as follows: Presbyterian, 40; Methodist, 30; Congregational, 17; Baptist, 15; Episcopal, 8; United Presbyterians, 4; Friends, 3; Evangelical, 2; Unitarian, 2; Christian, 2; Reformed Collegiate, 1; Dutch Reformed, 1; Reformed, 1; Disciples, 1; Dunkards, 1; United Brethren, 1; Church of God, 1.

There were 12 members of the Chautauqua correspondence college; 31 of the C. L. S. C.; 7 of the teachers' retreat; 12 of other collegiate departments; school of physical education, 2; elocution, 2; Delsarte, 1.

Teachers were present representing the following: Public schools, 6;

private schools, 6; high schools, 2; Yale Law School, Temple, Swarthmore, Wooster, Westminster, and 9 other colleges, each 1. There were many graduates of high schools and colleges present as students during the session.

#### THE TEACHERS' RETREAT.

Every branch of the educational work at Chautauqua is an historic outgrowth of the original (1874) normal training class for Sunday-school teachers, which, as we have seen, still survives. It was natural and necessary that normal work should be extended from religious to secular subjects. The whole art of teaching was better promoted by comprehensive than by one-sided training.

The introduction and development of a pedagogical department at Chautauqua were first accomplished in 1879 under the direction of Dr. J. W. Dickinson, superintendent of education in Massachusetts. Then it was that the so-called "Teachers' Retreat" was instituted. The name was perhaps derived, whether consciously or unconsciously, from the well-known religious custom of nuns and sisters who, from time to time, enjoy in convents what are called "retreats" for spiritual refreshment and renewal under helpful guidance. To one familiar with the Catholic model the contrast between a religious and a pedagogical retreat must at first seem rather violent; but teachers who regard their profession as a high and noble calling will find new inspiration in the academic groves of Chautauqua and discover new spiritual meanings in their withdrawal from active teaching to learn their art anew. Not always in seclusion but sometimes in a busy crowd is there a retreat from the world. The normal hall at Chautauqua, filled with 250 attentive and thoughtful teachers from the United States and Canada, listening to talks by men of insight on the psychology of children, is a very different place from a church or a chapel, but it may be equally good for human souls to be there, and it is perhaps not far from the kingdom of heaven.

In the summer of 1891 I heard Col. Francis W. Parker, principal of the Cook County Normal School at Chicago, lecture to a vast audience of school-teachers upon the unity of all education, and the need of the harmonious development of body, mind, and soul. After the lecture his wife recited Emerson's poem *Each and All*:

All are needed by each one;  
 Nothing is fair or good alone.  
 I thought the sparrow's note from heaven,  
 Singing at dawn on the alder bough;  
 I brought him home, in his nest, at even;  
 He sings the song, but it cheers not now,  
 For I did not bring home the river and sky;  
 He sang to my ear, they sang to my eye.

Colonel Parker is the man who reformed common-school education in Quincy, Mass. The school committee there said of him: "He found

our schools machines; he left them living organisms. He breathed life, growth, and happiness into the schoolroom." It is a great thing to discover how children think and learn, how their minds play and grow amid pleasing natural environments, how the human garden is best perfected by studying nature and returning to her ever anew for guidance and health. The children are learning most and fastest in natural play; their own fancies are in their way as correct as the instincts of savages or the speculations of philosophers. Education is all one process. Mankind must go through it as does the child, the savage, the sage.

In the summer of 1894 Mr. Walter L. Hervey, president of the Teachers' College, New York City, became principal of the teachers retreat at Chautauqua. He gave daily talks and lessons for four weeks upon psychology and pedagogics, supplemented by individual reports of observations of children. Such books were used for reference as James's Briefer Course in Psychology, Preyer's Infant Mind, Tracy's Psychology of Childhood, and G. Stanley Hall's Contents of Children's Minds. A course of public lectures upon psychological subjects was also given by Mr. Hervey, who was thus enabled to represent the character of his work before the Chautauqua Assembly. Twelve general lectures, conferences, and talks were given by the heads of departments and were open to all students in the teachers' retreat. The principal encouraged the teachers to concentrate their work in single departments, where definite work was laid out and a definite aim was attainable.

A corps of ten teachers was associated with the principal for the conduct of various departments, like manual training; English; form, drawing, and color. Three courses were offered in natural science: (1) Physics; (2) botany; (3) geology and mineralogy. In all three attention was paid to methods of teaching as well as to subject-matter. Lectures were given upon the ways and means of developing the scientific spirit among young pupils. Chautauqua has long been efficient in this direction. The class work, object lessons, and geological excursions of Prof. Frederick Starr were particularly successful. His popularity among small boys was unbounded.

One summer there was a Walking Science Club for children, conducted through the groves and fields of Chautauqua by Miss Mary B. Dennis, who taught her young and enthusiastic pupils to observe the leaves of trees, the life of insects, how to catch and preserve the latter, and how to classify plants, flowers, etc. All this was a novel feature of summer study at Chautauqua and was keenly appreciated by small boys and girls.

During the season of 1894 Miss Schryver conducted class excursions for the study of botany and geology. Teachers were taught how to conduct field lessons with children. A good beginning seems to have

been made in Chautauqua vacation classes for children and in boys' classes for manual training.

The statistics of the session show that in 1894 the total number enrolled in the seven courses of the retreat was 186. Of these one-half were in the department of psychology and primary methods, 43 were enrolled in English, 21 in form, drawing, and color, 44 in the three courses in science, and, counting children and teachers, 14 in manual training. Only 10 were enrolled in two departments.

One hundred and five of the members of the retreat were teachers of special subjects; 113 were teachers in public schools, and there was a considerable sprinkling of teachers in normal schools, superintendents, and principals of private schools.

There were 51 Methodists, 46 Presbyterians, 20 Baptists, and members of 13 other denominations.

Pennsylvania sent 49, Ohio and New York each 39, and 27 other States and countries were represented, including Canada and South Africa.

At the closing meeting of the teachers' retreat, August 1, 1894, brief addresses were made by the heads of the five departments and the season's work was reviewed. The following points were emphasized: (1) The plan of specialization which forbids teachers taking too much work; (2) the policy of continuity and development in chosen lines of work; (3) the desirability of small classes; (4) personal contact between teachers and pupils; (5) laboratory work.

#### G. STANLEY HALL AT CHAUTAUQUA.

In July, 1895, the president of Clark University gave a course of five lectures at Chautauqua on child study and biblical teaching. Like his brilliant articles in the *Forum* in the year 1894, these lectures were in themselves a sufficient justification of the new institution at Worcester, Mass., and of all the money that has been expended upon its dominant department of psychology and pedagogics. Only the briefest extracts from the meager general digest, as reported in the *Chautauqua Assembly Herald*, July 29, 1895, can be quoted here:

#### "I.—CHILD STUDY.

"The systematic observation of children began in America in 1879, with the publication of the measurements of the height and weight of several thousand Boston school children, by which it appeared that at about 14 the average American girl was both larger and heavier than the boy, who excelled before and later, but that both were larger than children of other nationalities. From this has developed many very comprehensive studies, showing that growth in height is chiefly in the large bones in the legs, is faster in the spring than in the fall, that the period of most rapid growth is that of least disease, that precocious children are on an average larger than dull children of the same age,

etc. Many more special measurements have been made since, as of hand, face, etc.

"In 1880 was published the first American study of children's minds, based upon my own list of 123 questions applied to 6-year-old children on entering Boston schools. This showed an amazing lack of what children are supposed by primers to know. Large per cents had never seen hen, chicken, robin, sunrise, stars, domestic animals, growing cereals, fruit, common trees and shrubs, etc. This new science of ignorance has been developed in many directions since. Children and moral conceptions have been especially investigated, their idea of God, angels, etc., always associated with physical heavens; their conceptions of punishments, rights, favorite stories, etc., have been specifically investigated. This line of work has made very great progress and children's anger, fears, superstitions, likes and dislikes, dolls, etc., have each been investigated. Their feelings for others, for nature, etc., are also studied. \* \* \*

#### "II.—ADOLESCENCE.

"The more we know of the history of education the more clearly we see that in every age and land its history begins with adolescence. Savages have then their rites and ceremonies of initiation everywhere. The Greek, Russian, Lutheran, Catholic, and Episcopal churches confirm, bringing home their strongest sanctions to aid the new desires, feelings, and passions awakened at this age; most conversions occur at this period; it is a time of physiological regeneration and the point where the soul is vastly deepened by new temptations, desires, feelings, etc. The sense of sin and personal uncleanness is far deeper than at any other time, so that conscience is first brought into full function.

#### "III.—PEDAGOGY OF THE OLD TESTAMENT.

"We need here (1) the professional Bible story-teller. Since print came in this is almost lost, but it has marvelous power in good hands. A good story is a kind of anthem played upon the heart. Thirty-six Old Testament stories, I think, if told professionally, without notes or antiquarian details, would reveal wondrous power. Personally I should not object to a few powerful and venerable stories appealing to reverence for Deity, from the Apocrypha, Targum, Catholic saint legends, Buddhism, and other faiths.

"2. Love of nature should be taught as a basis of appreciating Old Testament ideas. For children the sky is full of angels, God, heaven, etc. All Aryan deities are named from heavenly bodies and clouds. Our hymns are full of celestial imagery. The undevout astronomer or child is mad. Roger Bacon alternated the study of nature and writing of prayers. Bede turned from astronomy to write *Gloria in Excelsis*. Do you personally love nature or are you a stranger and an alien from her sanctities? The relation of nature to the Old Testament is some-

what like that of the latter to the New Testament. In the Old the New lay concealed, in the New the Old stands revealed. \* \* \*

"5. Finally, I hesitate to add a secret and personal conviction that steadily grows upon me as a psychologist, that ritual, forms, and liturgy are essential organs of understanding the Old Testament. Mr. Neale, in his masterly work on the history of church ceremonials, has shown us the best elements of the Greek chorus out of which the Greek drama grew. Ancient sacred dances, the best music and costumes were combined in the processions and forms by which the early church sang and marched to its triumphs at the time when it was spreading fastest through Europe. The new psychology of the emotions shows these are bound up with attitude, gesture, external forms, and even dress in a way we had not expected. At the Musée Guimet, the best school of comparative religions in the world, I attended a Confucian ceremony of the greatest impressiveness, but of which I understood nothing. The new psychology of symbols, and especially that of rhythm, suggests a new pedagogy in this element.

#### "IV.—PEDAGOGY OF THE NEW TESTAMENT.

"Nothing can be more superficial than the hints at these great subjects in an hour. You will see that I place the Old and the New Testaments on slightly different bases pedagogically, and would lay the chief stress on the Old Testament before and the New Testament after adolescence. Not but the New should be taught very early and the Old very late, but the deepest meaning of the New Testament can not be felt till the birth of those emotions that come at puberty. The heart, out of which are the issues of life, the Pauline charity, the higher Eros, is the essence of life.

"I plead from this new, high, and unbiased standpoint of pedagogy for the rescue of this grandest and most divine of all cults called conversion, the new birth, change of heart, to the central position which it once had and should regain in the church. There is something before it and after. It should be a more universal experience, deeper and more regenerating, fuller of the divine life, possible to every soul. There is no other possible way to do this than for many people, carefully, honestly, and prayerfully, to record their own experiences suggested by the syllabi offered to all who desire to make returns, that these may be no less reverently and carefully compared, studied, enlarged, etc. Each individual who will thus answer will, I believe, contribute to the cause of the New Testament in the world.

"We have grown morbid and almost prurient about the supernatural. All the arts and literature, ancient and modern, are full of it; but of the Bible many are ready to say that if Jonah's whale really had a small throat their faith is weakened. The supernatural is the only possible régime and treatment of the heart by which it can be kept—as it always should be—larger than the intellect. If the supernatural did

not exist we should have to invent it for the education of the deeper elements of the soul. The days of Tyndall and the prayer gauge are long since passed, and there is a new spirit of harmony abroad. In Homer, Dante, Plato, in every art, on the stage, in the nursery, the supernatural exists, not only unchallenged, but is psychologically the promise and potency of larger things for the soul. Those who have capacities for growth feel miracles and later know nature. The word supernatural, if it could be changed to supernormal, or even higher natural, would not interfere with the conception of Jesus as the superman, the culmination of the entire organic series.

"The church now needs nothing more than a Neo-Christian movement that shall rescue and develop our academic youth, now everywhere lapsing into indifference. No class of men or women so need the higher influences of Christianity. To them the higher criticism is a godsend. What Matthew Arnold calls *Metabiblia* is the same as the Neo-Christian movement represented by Paul Desjardins, De Vogue, Wagner, and others.

#### "V.—INCREASING THE POWER OF THE BIBLE.

"Modern education almost begins with Pestalozzi's tale 'How Gertrude Teaches Her Children.' It describes the regeneration of a dismal hamlet by a good teacher as the principle by which nations are made great. Fichte lit his torch here and made Germany the strongest State since ancient Rome by becoming the educational State of the world, and France has now imitated her example. Nowhere is research so relentless—nothing has been spared from it, but nothing has been injured.

"The lecturer protested against the fears, panics, and 'phobias' that still beset Christians. Once it was the dread of the Moslem; then of the Catholic, of materialism, of myth, of human nature, of agnosticism, pantheism, and what not. Our faith is feeble; let these all have their full fling; they can do no harm, and the oracles of God burn brighter.

"Self-sacrifice, a self-renunciation, is the moral of all morals, the end of the Bible. Let human nature go in all its faculties and it will end with God, with prayer, and with unselfish devotion. The new psychology is full of this faith and belief."

#### REGENTS' EXAMINATIONS.

Under the provisions of the New York State laws the higher educational department of Chautauqua is designated as an organic part of the University of the State of New York. The regents of the university have established a system of examinations in all academic subjects. Such of these examinations as may be called for are given at Chautauqua at the close of the college session in August, and official pass certificates are issued to those who submit acceptable papers.

The same plan has been adopted in the correspondence department of the college, in which all students are required to pass the regents' examinations. All students who desire examinations at Chautauqua file applications (designating subjects) with the principal on or before July 15.

For several seasons examinations have been held at Chautauqua in studies preparatory to college. The following letter from Prof. J. G. Allen, of the Rochester (N. Y.) high school, shows the results, as officially reported, of the regents' examinations of the University of the State of New York, held at Chautauqua, August 16, 1894:

CHAUTAUQUA, *August 16, 1894.*

DEAR SIR: As a result of the final examinations given by the board of regents of the University of the State of New York, August 15 and 16, at the College of Liberal Arts, I have the honor to report that a larger number of students took these examinations than ever before at this place. There were seventy-three<sup>1</sup> different examinations in fifteen different branches, as follows:

Wednesday, August 15, 1.30 p. m., algebra, 6; plane trigonometry, 3; Latin prose composition, 3; first-year German, 9; first-year French, 4.

Thursday, August 16, 9 a. m., advanced algebra, 2; plane geometry, 3; second-year German, 8; second-year French, 5; Cæsar's Commentaries, 2; Xenophon's Anabasis, 5.

Thursday, August 16, 1.30 p. m., third-year German, 8; third-year French, 6; Homer's Iliad, 5; Virgil's Æneid, 4.

There is no reason why all the departments of the Chautauqua University may not be represented and the students thereof receive the benefit of the regents' examinations in the coming years. Doubtless before another year arrangements will be made whereby the students pursuing higher college subjects may have the benefit of examinations at the close of their term here.

All of which is respectfully submitted.

JNO. G. ALLEN, *Regents' Examiner.*

Bishop JOHN H. VINCENT,

*Chancellor of the Chautauqua University.*

#### SPECIAL CLASSES.

Among the numerous special classes for members for which a fee is paid are the following: Piano, violin, organ, voice, banjo, mandolin, guitar, zither, elocution and oratory, Delsarte's system of symmetrical development, drawing and painting, industrial drawing, china decoration, tapestry painting, water-color designing, wood carving, art of letter writing, photography, school of cookery, phonography, stenography, typewriting, penmanship, bookkeeping, and kindergarten classes.

#### THE NEW ELOCUTION.

For many years Chautauqua had an excellent and practical school of elocution and oratory, conducted by the well-known Professor Cumnock, of the Northwestern University. Hundreds of teachers and clergymen were trained by him to use their voices in ways more natural and more effective in public. Every season public readings in a pleasing variety

<sup>1</sup> In 1893 about 50 persons applied for the regents' examinations.

were given by the Professor in the amphitheater for the entertainment and instruction of the people.

Reading and speaking in easy, agreeable ways are fine arts, and comparatively few persons acquire them either in public or private life. If a college or university man will reflect for a moment upon his own circle of acquaintance, he will realize how few men are really good lecturers, preachers, or debaters; how few students can deliver an original oration or read an essay in a manner that attracts and holds attention; how few persons in ordinary life can even read aloud a novel or a newspaper in a way that will not distress the sick and tire the well. Our schools of oratory often teach men to mouth their words, to rant and bellow rather than to speak as nature meant human beings to speak.

In the summer of 1894 a new school of elocution was organized at Chautauqua, and it is called a "School of Expression." Mr. S. H. Clark, of Chicago University, represents both at Chicago and at Chautauqua the new elocution, which he regards as the basis of the science of pedagogy. The new teaching starts with psychology rather than with mimicry and mouthing. Perception and feeling must precede natural expression. Reading, recitation, declamation, oratory, and acting are viewed simply as interpretations, hence the first importance is attached to literary appreciation. There must be some thought in the mind, some life and feeling in the soul, before a man or woman can truly express anything. All elocution that depends upon mere externals, whether vocal mechanics or pump-handle gestures, is unnatural and artificial. True oratory is like a spring—spontaneous. Mr. Clark lays much stress in his teaching, as does Dr. R. G. Moulton, upon interpretive recitals. Students are incited to penetrate to the inner life, the very heart of poems and plays, and to throw genuine thought and feeling into the art of expression. This was the secret of the wonderful success of Professor Corson, of Cornell University, in rendering Tennyson and Browning, whether to popular or select audiences. He felt what he read.

The amphitheater during the Chautauqua season is one of the best places in the country for the student to observe different styles of reading and oratory. Hither come public men (e. g., Hon. Andrew D. White, Theodore Roosevelt, Carroll D. Wright), preachers (Dr. Edward Everett Hale, Dr. J. M. Buckley, Dr. Frank Gunsaulus, Dr. W. S. Rainsford, Rabbi Gottheil, Ballington Booth), teachers and professors (Henry Drummond, R. G. Moulton, Owen Seaman, Von Holst, Boyesen, M. C. Tyler, George H. Palmer, Dr. Edward Eggleston), college presidents (M. E. Gates, J. W. Bashford, Charles F. Thwing, Alice Freeman Palmer), and a great host of other representative men and women.

#### SCHOOL OF PENMANSHIP AND BUSINESS.

One of the most helpful of the minor schools at Chautauqua is that of Mr. C. R. Wells for teaching penmanship, bookkeeping, and good business methods. The present writer has derived so much practical

benefit from Mr. Wells's instruction that it seems almost a duty to narrate the following bit of personal experience.

One morning at the Atheneum Hotel Mr. Wells was writing upon a large blackboard the lecture announcements for the day. Observing with admiration his rapid and legible writing, I said impulsively: "I would give \$500 if I could write like that."

Mr. Wells laid down his chalk and looked at me in astonishment. "Would you?" he asked. "Yes: I was offered that sum when I was a boy if I would only learn to write a decent hand, but I never could do it. Now I would give that sum myself if I could dispense with typewriters and write half as well as you do."

"Why don't you learn, and save your money?" asked the penman.

"It is too late now," said I.

"It is never too late to mend a bad handwriting," he replied. "Good writing is nothing but a trick, which anyone can learn."

"I don't believe that," said I. "Handwriting reveals character. Good penmen, like poets, are born, not made."

"Nonsense," said Mr. Wells. "I tell you good handwriting is nothing but a muscular trick, and an easy one at that."

"Well," said I, "it is not muscle that I lack, but proper control of my fingers. I have written so much in my awkward way that the process has become actually irksome."

"Let me see you write the word 'Chautauqua,'" said Mr. Wells, giving me a pencil and a bit of paper.

I did it in my best style, and the penman said: "I see. You make your thumb and forefingers do all the work, and you will certainly have 'writer's cramp' if you keep on writing in that way. But you can correct yourself. Let me show you the trick. Sit down at this table, open your hand, and rest the palm flat upon the surface of the table. That is right. Now shove out your forearm from the elbow and move your palm back and forth without stirring your cuff. Good. Now shut your fist and continue the same motion. Right. Now take this pencil lightly between your thumb and two forefingers. Make circles without letting your thumb and fingers do any independent work whatever. Let the whole hand and forearm execute the movement. Keep your thumb and fingers still. Ah, that is harder, but that is the trick. You will learn it. You can not break up the habit of years in a moment, or a day, or a week; but you can do it in time with a few simple exercises."

I saw the point in an instant and determined to learn the trick. I went to Mr. Wells's class rooms, took a few simple lessons, and practiced them diligently for weeks like a schoolboy, until I acquired a free and easy swing, that up-and-down motion of my whole right hand and forearm, without a tremor of the thumb and forefingers. I have since discovered that this is the trick of vertical handwriting which experts are now everywhere urging on hygienic grounds. I have found that

this excellent trick is a cure for tendencies to writer's cramp. Ladies often have this affection without knowing it. I have taught several persons this natural remedy.

Probably I shall never become an elegant penman, but I would not unlearn for \$1,000 the muscular trick which Mr. Wells taught me without money and without price. I had to go to Chautauqua to learn what I ought to have learned when a boy at school. A decent handwriting is really elemental in all education; but many college men of my acquaintance would do well to take a course in reading and spelling as well as in vertical penmanship at Chautauqua before writing an illegible thesis, applying for the degree of doctor of philosophy, and attempting university-extension lectures for the improvement of the American people.

Bookkeeping is also well taught at Chautauqua. Here is another important subject that is practically ignored in the school and college training of many young men and women, who sometimes inherit or assume financial responsibilities for which they are in nowise fitted. The most rudimentary facts regarding the theory and practice of accounts are often unknown to college graduates. I once knew a New York lawyer, a graduate of one of our best New England colleges, who deliberately set to work years after he had obtained a good law practice to master the intricacies of bookkeeping, in order better to grasp the details of certain cases that he had in court. And he did it finally to the confusion of certain witnesses who professed to be experts. The theory of Chautauqua is that it is never too late to learn what one ought to know. It was the theory of old Cato, when he began the study of Greek at the age of 80.

#### AMERICANIZED DELSARTE.

Herbert Spencer says: "We have had something too much of the gospel of work; it is time to preach the gospel of relaxation." This needed doctrine is taught at Chautauqua by Mrs. Emily M. Bishop, assisted by Miss Dorothy Bishop, in the Americanized system of Delsarte culture. This "seeks relaxation, rest, reposefulness, conservation of vital energy, nerve and brain reenforcement, health, symmetrical bodily development, easy and controlled motion, gracefulness, self-control, natural expression." The fundamental principle of the Delsarte system is economy of force. This principle is practically applied to ordinary physical actions, such as breathing, talking, standing, walking, going up and down stairs, rising, sitting, kneeling, etc.

In a lecture given by Mrs. Bishop at Chautauqua (see *Assembly Herald*, August 4, 1893) she said Americanized Delsarte culture is a scientifically arranged series of exercises designed to give the over-worked nervous man or woman such intelligent exercise of the nerves and muscles as will rest the tired body and help the will to regain entire control of its servants. Elsewhere she maintains that American-

ized Delsarte culture teaches vital economy. "Conservation of nerve force is the fundamental principle of this teaching. By the freeing or relaxing exercises nerve tension is removed from the muscles when they are not in use. Nerve force thus drawn from the extremities and exterior muscles is conserved at the nerve centers, giving 'strength at the center, freedom at the surface'—Delsarte's law."

There are in the Delsarte system various rhythmical exercises which exert upon the nervous system a quieting and soothing influence. Violent movements and unnecessary expenditure of force are not encouraged. Easy, graceful motions are taught. Bad physical habits are broken up and easy natural ones established. In her lecture Mrs. Bishop called attention to the simple fact that many writers will clutch a penholder and exert far more nervous force than is actually necessary in writing. This leads to writer's cramp. The same squandering of vital energy is often seen in playing the piano, in working a telegraphic instrument, or in other finger movements, which sometimes lead to partial paralysis or nervous exhaustion from simple waste of energy.

The Delsarte system has proved of great service in connection with the Chautauqua school of expression, elsewhere described under the head of the "New elocution." For mechanical exercises are substituted natural, easy, graceful gestures and bodily movements. Freedom and beauty of expression are sought and attained.

#### MUSEUM OF ART AND ARCHÆOLOGY.

In 1882 Chautauqua formally dedicated a museum for the illustration of biblical archæology and art history. Subscribing to the Egyptian exploration fund, Chautauqua has secured for herself many valuable and original specimens of ancient pottery and other arts. She is the owner of various facsimiles of biblical manuscripts and of an interesting collection of plaster casts—for example, the Rosetta Stone, the Black Obelisk of Shalmaneser II, the Winged Lion and Winged Bull of Nineveh, bas-reliefs of Assyrian and Egyptian gods, the Deluge Tablet, the Moabite Stone, the Siloam Stone, and many other ancient monuments. There is also a large collection of photographs representing ancient, mediæval, and modern periods of art and architecture.

Classes in history occasionally meet at the museum for the better illustration of class lectures. During the assembly season, in the month of August, explanatory and well-attended lectures are given almost daily in the museum by Rev. C. M. Westlake. The secretary is the Rev. J. E. Kittredge, D. D. Illustrated art lectures on sculpture and architecture are given in the amphitheater at Chautauqua by Prof. W. H. Goodyear, of the Brooklyn Institute, whose book on the Renaissance and Modern Art is now used by the Chautauqua Literary and Scientific Circle. Thus art ideas may quicken the American people.

The present museum building at Chautauqua is an unpretentious wooden structure with galleries and is already crowded with illustra-

tions of history and ethnology, as well as of art and archæology. Better classifications and descriptions of material and a larger fireproof building are urgently needed for this growing and popular museum at Chautauqua. Next to libraries and laboratories, museums are among the best agencies for the higher education of the people.

From the very first Chautauqua cultivated the museum idea by intelligent object lessons, models of architecture, relief maps of Palestine and Jerusalem, and exhibitions of interesting objects from Egypt and far-off lands. There has always been a certain oriental coloring about Chautauqua shops and bazars. There used to be an "Oriental House," with a flat roof and lattice work and lounges around the wall. There was once a "Tabernacle," with its Holy of Holies, its altars and brazen vessels, its cherubim and seraphim. But these things, with Noah's ark, oriental lecturers in fez caps, and Arabian camel drivers, have all passed away. The museum is the place where some bizarre objects still linger. A really fine model of the city of Jerusalem, under a kiosk near Palestine Park, was destroyed only a few years ago in a gale of wind, which toppled over great trees and ruined the image of the Holy City; but the ground is now cleared for a beautiful park.

#### PALESTINE PARK.

A striking reminder of the Orient may still be seen at Chautauqua in the great relief map of Palestine. The hilly country is accurately represented, according to the surveys of the Palestine Exploration Society, by mounds of stone and turf extending for 300 feet along the shore of Lake Chautauqua, which serves for the Mediterranean Sea. The Dead Sea, the Jordan Valley, Lake Tiberias, the waters of Merom, Tabor, Hermon, are conspicuous features. All the cities from Dan to Beersheba are represented by miniature towns of painted iron. Joppa, Tyre and Sidon, Jerusalem, Nazareth, and Bethlehem are easily found by the local explorer. Mount Carmel, the pastures of Gilead, and the hills of Moab are favorite seats for Chautauquans at evening when they seek the lake shore to hear the open-air concerts at the pier. Small boys climb the dizzy peaks of Mount Hermon, and thoughtful Sunday-school teachers follow the dangerous path from Jerusalem down to Jericho. The elevations of this great relief map are rather exaggerated by scale in order to bring out clearly the contour of country. It is not quite safe to stroll along the footpaths of Judea, Samaria, and Galilee on a dark night. The lonely traveler may miss his footing and go rolling down into the Jordan or into its upper sources. Frequent lectures on Palestinian geography are given in the month of August to waiting groups of modern pilgrims through this miniature Holy Land. The student will, however, get a much better conception of the physical and historical geography of Palestine from a relief map and wall maps which are always accessible in the museum building. Chautauqua has always been fond of devices for the study of the geography of the Bible. Popular and individual ignorance upon the subject is so profound that

any legitimate agencies for teaching a knowledge of "the Land" as well as of "the Book" deserve to be encouraged.

#### THE BOYS' CLUB.

It is no easy task to employ and amuse the growing number of small boys who come to Chautauqua with their parents for the summer season. Various experiments have been tried, all more or less successful; but at last the management seem to have hit upon just the thing, namely, a boys' club in connection with and under the absolute control of the department of physical culture.

Near the gymnasium, by the lake shore, a large tent has been erected, and there the boys meet for all sorts of juvenile exercises under competent direction. Good leadership is the one essential principle in the training of youth. As in tribes of Indians, so boys, young and old, obey their chiefs or natural leaders and follow them through thick and thin. Boys' standards of honor and conduct are always those of the ring leaders of their tribe or gang. Hence the importance of utilizing authority and the tribal or social instinct among lads for their moral and intellectual improvement. A born leader, with high ideals of fair play and square dealing among boys, can do almost anything with them. For example, an athlete and successful ball player like Capt. A. A. Stagg in straightforward talks to clubs of large and small boys has accomplished wonders in the line of physical, moral, and even religious training. He and other well-known Yale men at Chautauqua are doing fine educational work in this direction.

Dr. Anderson and his assistants in the Chautauqua gymnasium put the boys through a daily military drill, which is one of the very best agencies for teaching habits of order, precision, and quick obedience to authority. Gymnastics and field sports are taught the boys by Yale College men. Swimming lessons are given under perfectly safe conditions. The boys are taught to row boats, splice ropes, tie sailors' knots, and to practice all those useful tricks and accomplishments which rejoice the hearts of young sportsmen and savages. Colonel Parker at Quincy, Chicago, and Chautauqua early showed teachers the importance of utilizing the natural instincts of boys in their education. It is a simple fact that they are savages or barbarians throughout their school and often throughout their college years. Nothing will develop lads faster and better than good physical training under fine personal leadership and under strict Spartan discipline. It used to be a great joy at Chautauqua to see and hear Stagg train boys upon the ball field. No military leader could have received more absolute and ready obedience. Good team work, or good morale, is perhaps the secret of Yale success in athletics. It has certainly been introduced at Chautauqua, and it usually carries the day whether in baseball or boating.

Three nights each week during the season of 1894 members of the Boys' Club were taken in small relays by boat down the lake to Pendergast Creek, where they camped out under the authority of Mr. J. A.

Babbitt or some other experienced leader of mature years. Here, amid the woods along the shores of creek and lake, the small boys have splendid times. Ranging the forest and fishing the streams by day, building camp fires and tenting at night are occupations which fill these young savages with joy. They expressed it, however, in a model academic yell one evening after sunset when a little company of friends with good supplies rowed up the inlet to call upon the camp:

Rah, rah, rah!

Rah, rah, rah!

B. C. ! B. C. !

Chau-tau-qua!

The appearance of the boys' class at the athletic exhibition August 10, 1894, excited favorable comment: "The boys' class—80 strong—filed in, and under the leadership of Mr. H. S. Anderson went through a series of educational gymnastics, the beauty and grace of which called forth a constant storm of applause. The movements were made with excellent precision and reflected great credit upon the thorough work of Mr. Anderson and the class." (*Chautauqua Assembly Herald*, August 11, 1894.)

#### THE GIRLS' CLUB.

In the summer of 1892 a girls' club, called "The Outlook," was organized by Miss Mather, a graduate of Smith College in the class of 1883. She has been for some time intimately associated with the social movement of the Y. W. C. T. U. It should be remembered that the Chautauqua idea and the W. C. T. U. originated at the same time and place, in 1873 at Chautauqua. There is now a strong and practical tendency toward the promotion of temperance by educational, social, and sanitary measures. Miss Mary Mather, of Wilmington, Del., was for some time a leader in organizing health meetings and devising temperance entertainments. Her success in interesting girls in home life and useful social work was phenomenal. She was greatly aided in her work by Miss Alice Smythe, of Wilmington, Del. Miss Agnes Lathe, of the Woman's College of Baltimore, became the leader of the girls' club in the summer of 1895.

The design of The Outlook, as indicated by its name, is to broaden the vision of girls into life and to apply this vision practically in their own environment. To this end topics are discussed relating to the girls themselves, their homes, and their neighbors. The club is not a class or a Sunday school, and has no course of reading; but it is social, helpful, educational, inspirational. Such themes as the following are discussed by leaders and members: "Realism and romanticism in housekeeping;" "Business methods;" "Bread;" "What shall we do with our great-grandmothers" (or how to modify or eliminate heredity); "What to do in the evening;" "Kindergarten glimpses;" "Our intellectual compass;" "The ideal house;" "The ideal guest;" "The ideal hostess." Invited guests sometimes give short talks to the club. One

summer, when Miss Alene M. Skinner, of Marshalltown, was in charge of the club, Miss Jane Adams, of Chicago, described her experience in the Hull House settlement. Mrs. Alice Freeman Palmer spoke of the "Ethics of the schoolroom," likening the teacher's arduous position to that of a mother in her household. Miss Kate F. Kimball, executive secretary of the C. L. S. C., talked to the club on "After graduation." She spoke of the graduate in the school and home, urging deference to parents and consideration and helpfulness to the other members of the family. Her hints on reading were to read biography and to commit to memory poetry. A suggestion to magazine readers was to study illustrations and learn something of the artists. The country girl was urged to start a public library and to weed out the Sunday-school library; the city girl to aid in college settlements, philanthropic associations, working girls' clubs, free kindergartens, the Chautauqua circle.

Receptions, readings, music, and other forms of entertainment have made The Outlook very enjoyable to its members and their friends. The *Woman's Journal*, in a letter from Chautauqua, dated August 20, 1894, says: "The club is now in its third summer, and has a varying membership of from 50 to 200. The conditions of membership are to attend the daily meetings, to pay 10 cents, which goes to defray the expense of the weekly Saturday teas, etc., and to wear the club badge, which is a modest bow of white and pale-green ribbon. As the club is largely social, it is divided into tens, each ten choosing a patron saint, and to these tens is often referred business coming before the club. The patron saints chosen for this year have been Kate Douglas Wiggin, Mrs. Alden ('Pansy,' who lives here), Lady Henry Somerset, Elizabeth Barrett Browning, 'H. H.' (Helen Hunt Jackson), Alice Freeman Palmer, Jean Ingelow, and others. Each ten has its own special device, emblematic, if possible, of the life and work of the woman chosen, and each in turn gives a quotation, the Ingelow circle giving 'It is well for us to be as happy as we can,' and the Palmer circle, 'There is no greatness but goodness; there is nothing lasting but love, for love is the measure of life.'"

One minister's wife went away from a club meeting saying gratefully, "Now I shall know what to do with a lot of girls in our church."

The religious training of boys and girls at Chautauqua is provided for in the various Sunday schools. The boys' and girls' class meets daily during the first fortnight in August for the study of Bible geography and history.

Chancellor Vincent occasionally talks to the Girls' Club. At one meeting in their clubroom in the Presbyterian House he urged greater concentration. "Take one thing and center your attention and power upon it. Do it magnificently. Attempt few things, but do them well. Woman's greatest power as a rule is in the home life, in the kitchen, nursery, parlor, and church parlors. Any emancipation of women which leads them to despise domestic duties is slavery for both men

and society. Patience, gentleness, forbearance, tenderness are to woman like jewels. Get ready for good homes. Nothing is needed so much as wifely, skillful women."

The Outlook now enjoys spacious accommodations in the new building called the Higgins Memorial Hall, erected for special work and classes in social science or applied sociology. Speaking of this new building dedicated August 14, 1895, the Assembly Herald of that date said editorially:

"While the building adds another hall for services, lectures, and social meetings, it is to find its largest usefulness in the service of young girls. It is to be their social home while sojourning in our summer city, their school, library, drawing room, and cosy corner where they can sit apart in girlish quiet and seclusion. Some one once said that children were discovered only about fifty years ago. The young girl discovered herself hardly five years ago. The woman-child is the coming woman, wise above all her sisters, strong, vigorous, not afraid of the fine education of oar and wheel, touched with the inspiration of the arts—and yet a woman. The clubable girl is with us, her clear, brave eyes looking forward to a new girl life, knowing and using the education, refinement, and unselfish humanity a girls' club can give her in all sweetness and maidenly dignity. The Girls' Club has completely overturned the old definition of club life. Higgins Memorial Hall is to be the coming Chautauqua girls' clubhouse. Its solid walls will typify to her the permanence and dignity of home and home life, its fireside corner the sweet companionship of home. Its Gothic roof will suggest that broader spirit that will some day invite her to the life of the club, the church, and society."

#### WOMAN'S WORK AT CHAUTAUQUA.

From the beginning women have taken a prominent part in the educational work of Chautauqua. Coeducation has always prevailed, and probably the majority of pupils in most departments of instruction are ladies. Male teachers and professors are chiefly employed in the college work and in the schools of sacred literature, but women are prominent in many specialized branches of teaching, especially those relating to children and the domestic or household arts. There is at Chautauqua a house called the "Jewett Home" for women teachers and those preparing to teach. It is under the management of Dr. W. A. Duncan, secretary of the assembly, and will accommodate thirty or forty guests, who manage their own housekeeping upon a cooperative and inexpensive plan.

There is one building, the Kellogg Memorial, entirely devoted to woman's work. Upon the first floor is the kindergarten, elsewhere described. On the same floor are the parlors of the Woman's Christian Temperance Union. On the floor above is the department of china painting. Water-color designing and tapestry painting are also encouraged. An excellent school of wood carving still flourishes at

Chautauqua under feminine management. Constructive and free-hand drawing and the designing of ornaments are well taught by ladies. For many years a school of cookery has been maintained at Chautauqua by Mrs. Emma P. Ewing, who often gives public lectures upon this important art. The Delsarte classes conducted by Mrs. Emily M. Bishop and her assistants are deservedly popular. The Woman's Club holds frequent morning sessions, under the guidance of Mrs. Emily Huntington Miller, for the discussion of household economics, social ethics, health, and missionary and temperance work.

Speaking of woman's work at Chautauqua, Mrs. Emily Huntington Miller says:

"As the tendency of Chautauqua seems to be more and more to unite in special departments associated lines of study and research, we find the latest outgrowth of its wisdom to be an attempt to organize what may be specifically called 'woman's work,' so as to present without conflict its various interests. Woman's missionary work, both home and foreign; the temperance reform, especially in its fundamental educational work; all that pertains to home and home making; questions of dress and family economics, the physical care and training of children, their intellectual, moral, and religious education; the administration of charities and methods of permanent help to the ignorant; familiar lectures to mothers upon the care of their own bodies; talks upon the selection and preparation of food, and systematic lessons in cooking—these and kindred topics held last year the attention of the Woman's Club. Such work must tell upon the home life. It gives new insight into methods; it awakens thought and stimulates research; it gives to women a consciousness of mutual aim and interest; it tends to the harmonious development of character.

"If the Chautauqua movement has been a special boon to one class more than another, it has been to the women, and especially the mothers of America. The zest and eagerness with which they welcomed and entered upon its course of study, and the rapidity with which its circles widened and multiplied, must have been a surprise even to the prophetic vision of its originator, and is sufficient demonstration of need and adaptation.

"Who can estimate what the sense of comradeship and association with others has been to women whose lives are necessarily isolated? They had gone on thinking their own thoughts and bearing their own burdens, regretfully conscious that they were dropping out of sympathy with intellectual life and progress, yet seeing no escape, until suddenly a hand reached out to clasp theirs. They were drawn into a magic circle that brought them into fellowship with thousands of others, all listening to the same truths and pondering the same questions, and they found in the companionship help and strength. Many a lip that had long been conscious of thirst found satisfaction in the fresh draft presented to it; many a soul has been awakened to a new sense of

delight by the rousing of dormant powers and the developing of unsuspected resources in itself.

"Intelligent young women are employed to a large extent in all the office work of Chautauqua and in the business management at the rooms of the C. L. S. C. and of the Chautauqua Assembly Herald. Miss Kate F. Kimball has long been the executive secretary of that vast nexus of local reading circles and her numerous assistants at Buffalo are clever young women, some of them graduates of our best schools and colleges. Miss Chamberlin is the executive secretary of the College of Liberal Arts and is assisted by college graduates. She is also secretary of the American Institute of Sacred Literature. Chautauqua experience in the employment of women for expert service in offices has proved of great advantage to the rising University of Chicago under the efficient direction of President W. R. Harper, who is also principal of the Chautauqua system."

#### CONSTITUTION OF THE CHAUTAUQUA WOMAN'S CLUB.

[Mrs. Emily Huntington Miller, president.]

ARTICLE 1. This association shall be called the Chautauqua Woman's Club.

ART. 2. It shall be a department of the Chautauqua Assembly, its president shall be appointed by the assembly authorities, and its work carried on in harmony with their plans.

ART. 3. Its objects shall be self-improvement, mutual help, fullness and preparation for better work along those lines of special interest to women as home-makers.

ART. 4. Its work shall be carried on by conferences, public addresses, reading and study, and shall be divided into the following departments: Household economics, health and hygiene, education, social ethics, philanthropy, and reform.

ART. 5. Its officers shall be a president, secretary and treasurer, and five vice-presidents, who shall constitute an executive board for the transaction of business.

ART. 6. The officers, with the exception of the president, shall be elected annually by ballot at a special meeting of the club, and shall continue in office until their successors are elected.

ART. 7. It shall be the duty of the executive committee to prepare and present to the club before the close of its yearly session an outline of work for the following year.

ART. 8. Any woman interested in the objects of this association may become a member by subscribing to the constitution and paying an annual fee of 25 cents.

ART. 9. Woman's clubs organized for similar purposes in the Chautauqua assemblies, or those hereafter organized, may, upon application, receive the plan of work and be recognized as associated chapters. Such chapters may send delegates to the sessions at Chautauqua, who shall be recognized as members of the club.

*Outline of work—session of 1893.*

I.—Parliamentary law, two sessions; coeducation, discussion; the art of conversation; table talk; social customs and courtesies; laws and duties of hospitality; physical training at home; dressing for comfort; home nursing; practical sanitation; what woman owes to herself; fairs, festivals, and follies; young people's societies; girls and other girls; home reading and study; Sunday at home; industrial training for girls; manual training in our public schools.

II.—Missionary conferences: (1) The missionary spirit, the life of all church effort; (2) news from mission fields at home and abroad; (3) how to organize and conduct societies; (4) training and work for children.

III.—Temperance conferences: Temperance work for children (*a*) in the home, (*b*) in the L. T. L., (*c*) in the public school; temperance work for young ladies—what to do and how to do it; alcoholics in medicines.

## THE KINDERGARTEN.

One morning I visited the Chautauqua kindergarten and was delighted with the gracious, winning manners of the teachers and the quick responsive ways of the little children as they bowed and courtesied, advanced, retreated, and circled around in beautiful rhythmic motions, all intent upon action and all unconscious of self. Then, for the first time in my life, I obtained a glimpse into the new heaven of child nature when properly cultivated in a kindergarten.

"Fifty sweet child faces, twice fifty tiny busy hands and nimble feet tripping in 'pretty, pleasant play.' If the ghost of Frederick Froebel could take the place of his picture on the walls of the kindergarten room at Kellogg Hall, it would pray to be reembodyed that it might express its gratification that the principles he formulated are accomplishing so much. Under Miss Newton's care these tender human plants grow fair and symmetrical. The teaching looks to a kindly nurturing of mind and body and true character building. The "Walk and talk" man followed with a keen interest the thread of unity which runs through it all. Water is the subject for the season. Every exercise of scissors or pencil, each play and amusement, relates to it. In their rambles together through the grounds the classes investigate it. The five-year-olds visit a locomotive at the station and study steam. The four-year-olds learn the uses of ice from refrigerators. They are taught to use their senses, to analyze, to investigate.

"I learned from Miss Frances E. Newton that there are over thirty teachers in the kindergarten training class, a larger number than ever before. More children, too, desire to enter the kindergarten than accommodations will allow. Referring to the kindergarten work of the country, Miss Newton said that it is bound to come into the public-school system, although it would not be for the best interest of the kinder-

garten to become so. The pinch of the machinery would injure its freedom and the spiritual investiture which is now its glory. Miss Newton has taught the work here five years. She will, during the coming year, be one of the faculty of the Kindergarten Institute, Chicago, which is cooperative with the social settlement of the University of Chicago." ("Walks and talks," see Chautauqua Assembly Herald, August 4, 1894.)

#### CHAUTAUQUA EXTENSION LECTURES.

The following general statement is taken from the report on the Chautauqua System of Education, prepared for the educational exhibit of the World's Columbian Exposition:

"The Chautauqua extension lecture plan is a modified form of university extension, adapted to the needs of all communities which do not support a regular university extension course. The details of the plan, as carried out during the winter of 1892-93, included a single course of six lectures on Greek social life, prepared by Prof. Owen Seaman, a graduate of Cambridge, England. Any community desiring to give the course was provided with general announcements, course tickets to be sold at 50 cents each, a 16-page syllabus for every ticket holder, and the six lectures printed in large, clear type. The syllabus contained a full outline of each lecture, a list of recommended books, and questions to be used as a quiz. Each community provided its own reader and a competent person to conduct the quiz. No financial risk was incurred, as the Chautauqua office required only one-half of the gross receipts (in no case to exceed \$25). More than seventy courses were given during the winter of 1892-93.

"Additional courses were prepared for 1893-94:

"Social sciences, by Prof. A. W. Small, of University of Chicago.

"The Bible, by President W. R. Harper, of Chicago.

"Poetry of Browning, by Prof. Owen Seaman, Cambridge.

"Great periods of mediæval history and art, by William H. Good-year, Brooklyn Institute."

An interesting report of progress from the pen of Miss Kate F. Kimball appears in her report of the work of the Chautauqua Literary and Scientific Circle for 1893-94 (see Chautauqua Assembly Herald, August 23, 1894):

"The Chautauqua extension lecture plan which was inaugurated so successfully in the fall of 1892 has met with equal acceptance during the past year. It will be remembered that by this plan courses of lectures prepared by university professors were furnished in typewritten form to any community wishing to give such a course. Tickets and announcements were also provided, the latter for general distribution, the former to be sold at 50 cents each. Every ticket holder was given a printed syllabus covering the entire course, and in the necessary absence of the lecturer himself the lectures were read by some member of the commu-

nity. One half of the proceeds was retained and the remaining half paid to the Chautauqua office. In 1892-93 70 courses were given, and during the past year, in spite of the prevailing financial distress, the record has been equally good, the courses reaching in all about 3,000 people. More than 50 communities used the lectures on "Social science," by Prof. A. W. Small, of the University of Chicago. Six made use of those on "Great periods of mediæval history and art," by Professor Goodyear, of the Brooklyn Institute. Five took "Greek social life," and two the "Poetry and teaching of Robert Browning," by Owen Seaman, of Cambridge, England. The lectures were given under the auspices of a great variety of organizations—Chautauqua circles, Epworth leagues and Christian Endeavor societies, Y. M. C. A.'s, women's clubs, and other literary associations. Wherever possible, persons of special ability were secured to present the lectures, and in other cases the lectures were read by club or circle members. In 30 communities the course was followed by a quiz or discussion. In many cases the lectures were given in churches, but public halls, clubrooms, and private parlors were also utilized. Twenty-three States were represented, including an area from New England to California, Montana to Texas.

"In a small Massachusetts town two college graduates, representing Wellesley and Vassar, undertook the course in social science for the benefit of the community. The lectures were given as a parlor course, with an average attendance of 25, and the following report was received from this center: 'The lectures have been a great success and just what the people needed to arouse them. Chautauqua is doing a wonderfully good work in enabling people of all sorts and conditions to come in touch with the best thought.' Out in a small Nebraska town 40 tickets were sold for a similar course, and the secretary writes: 'They were a rare treat to us who do not often have an opportunity to hear a lecture.' A political economy club in Ohio gave the lectures as part of their regular work. A debating club of young men in Delaware took up the study of Professor Ely's Outlines of Economics in connection with the lectures. A Congregational minister in Connecticut who enlisted 40 people in the study of the course writes: 'Sunday evening I studied with my young people by the aid of a blackboard and map society on 2 miles of country road, 15 miles from any railroad. Results were very apparent and I am sure all present drew lessons which they will not soon forget.' In another Connecticut town the course was very appropriately given for the benefit of home missions, and the report gives the following facts: 'We have sold 51 tickets for the social science lectures and have had a very delightful time, meeting in the parlors of private residences. The fourth and sixth lectures were particularly fine. The last lecture and discussion were a crowning success. There were professional men and manufacturers in attendance, and at 11 o'clock the people were sorry to go home.' A considerable number of the courses were given under the auspices of Chautauqua circles. In a Vermont town where the lectures were given a year ago a circle was organized as a result of the interest thus awakened and a part of the proceeds

of the course was devoted to a set of books for the use of the society. The Chautauqua unions of Jersey City, New York City, and Buffalo also made use of the course in social science. In Buffalo each lecture was given in a different church, so that the course as a whole touched many elements in the community. The average attendance was about 300, and both workingmen and employers took part in the discussions.

"The Browning lectures were given under the auspices of two clubs in Harrisburg, Pa., and Topeka, Kans. The president of the former wrote: 'Our club has enjoyed the lectures very much indeed. Every member is enthusiastic over them. They have been a most admirable introduction to Browning and we are all stimulated to do independent work in the writings of the poet ourselves.' In Topeka the lectures were given under the auspices of the Friends in Council. About 100 persons attended the lectures, which met with hearty appreciation both from students of Browning and also those who were making their first real acquaintance with his works.

"The success of this important feature of the work of the C. L. S. C. will make it possible to extend the plan indefinitely by the addition of courses adapted to the needs of many different classes of people."

#### THE COMPLETE CHAUTAUQUA SYSTEM.

- |   |   |  |   |   |
|---|---|--|---|---|
| The Chautauqua system.                              | Home reading and study.   | (a) The Chautauqua Literary and Scientific Circle.—A four-years course of general reading. [Certificate granted. Does not count for degree.] |   |   |
|   |   | (b) Specialized courses for continued reading and study. [Certificate. Does not count for a degree.]   |   | History.<br>Literature.<br>Science.<br>Art.<br>Pedagogy. Teachers' Reading Union.   |
| Summer study and rational recreation at Chautauqua. | Home reading and study.   | (c) School of theology.—Correspondence instruction. [Degree B. D.] Rigid examinations personally supervised. [No honorary degrees.]          |   | (1) Hebrew and Old Testament.<br>(2) Greek and New Testament.<br>(3) Biblical and doctrinal theology.<br>(4) Ecclesiastical history.<br>(5) Homiletics and pastoral theology.<br>(6) Christian science, life, and literature. |
|   |   | (d) College of Liberal Arts.—Correspondence instruction in preparatory and college studies. [Degrees of B. A., etc.]                         | Latin, Greek, French, German, English, mathematics, psychology, political economy, history, physical science, geology, and biology. | Sixteen courses and rigid personally supervised examinations are required to secure the degrees B. A. or B. S.  |
|   | (e) University extension.—Lecture courses on all college and university subjects. Specially arranged for each locality desiring them. |  |   |   |
| Summer study and rational recreation at Chautauqua. | Home reading and study.   | (a) College of Liberal Arts. [No degrees except through correspondence department.]  |   | Personal instruction by well-known men in all departments mentioned under (d) above.  |
|   |   | (b) School of methods in teaching.   |   | Psychology.<br>Pedagogical principles.<br>Applications and methods.   |
|   |   | (c) Schools of sacred literature. Study of the Bible as a great classic and inspired book.   |   |   |
|   |   | (d) Classes in art, music, physical culture, elocution, kindergarten, etc.   |   |   |
|   |   | (e) Lecture courses on the university extension model.   |   | Progressive courses by one lecturer. No extra fee is charged. The attendance is large.  |
|   |   | (f) Public lectures and addresses by men and women prominent in various departments of life.   |   |   |
|   | (g) Recreative and æsthetic elements, concerts, dramatic recitals, stereopticon entertainments, etc.                                  |  |   |   |

## THE CHAUTAUQUAN.

The literary organ of Chautauqua is now a monthly magazine, called *The Chautauquan*. It is of the same size as the *Century Magazine*, and is published at Meadville, Pa., by Theodore L. Flood, the editor and proprietor. He deserves all the success he has won in this enterprise, for he alone, in the days of Chautauqua's weakness, had the courage to assume the financial responsibility of publishing the needed educational matériel for the C. L. S. C. Beginning experimentally, Dr. Flood has gradually widened the scope of the magazine and so improved its literary character and appearance that it now is the successful rival of some of the leading popular magazines.

The Chautauquan commands writers of the best talent and reputation in the educational fields cultivated by its readers. English as well as American authors contribute to its columns. The late Prof. Edward A. Freeman wrote for it a long series of historical articles. Among the contributors for the current volume, 1895-96, are Prof. John W. Burgess, of Columbia College, on the Constitution of the United States; Prof. N. S. Shaler, of Harvard University, on geological subjects; Profs. Albert S. Cook, of Yale, and L. A. Sherman, of the University of Nebraska, on literary themes; Prof. A. B. Hart, of Harvard, and Prof. Henry E. Bourne, of Western Reserve University, on historical topics.

In addition to the required readings for members of the C. L. S. C., *The Chautauquan* contains each month a variety of general reading of an instructive character, special departments called the "Woman's council table," the "Editor's outlook," "Current history and opinion," "Talks about books," and specific directions and instructions for the guidance of the C. L. S. C.

## THE CHAUTAUQUA ASSEMBLY HERALD.

After the season has fairly opened at Chautauqua a daily newspaper called the *Chautauqua Assembly Herald* is published on the grounds. A preliminary issue contains the entire programme and appointments for the season. The regular issues contain reports of lectures, addresses, conferences, concerts, readings, receptions, entertainments, in short the news and history of Chautauqua from day to day. There are short editorials on topics of special interest to visitors and residents, with personals, "Walks and talks," and the drift of the day. Twenty volumes of this *Assembly Herald* have now been published, and they are one of the best sources of information regarding the history of the great summer school on Chautauqua Lake. They are the abstract and brief chronicle of the whole work. The files are really of great practical value to teachers as well as students, for the columns contain digests of all the best things said and done in this great summer rendezvous of educators and specialists. It is no slight privilege to have good reports of such admirable educational talks as those given by

President G. Stanley Hall in the summer of 1895, or of the various lectures that season by Principal Fairbairn, John Fiske, Dr. Edward Everett Hale, and Prof. R. G. Moulton.

#### THE CHAUTAUQUA CENTURY PRESS.

For some years the text-books and publications designed for the C. L. S. C. were issued by Hunt & Eaton, or the Methodist Book Concern, in New York City. A few years ago the Chautauqua Press was organized, with headquarters in New York City. This organization is now known as the Chautauqua Century Press, with headquarters at Meadville, Pa., but with a New York office at 150 Fifth avenue. From this press proceeds the Chautauqua Reading Circle literature, not only the regular annual series of required text-books, but a great variety of general literature used in connection with the various courses. In former years it was not unusual for Chautauqua to adopt certain books issued by great publishing houses and to secure from them special editions for Chautauqua readers. The amount of good literature which has been put into popular circulation in these ways is beyond all present estimate.

#### BISHOP VINCENT.

An excellent article, by Miss Ida Tarbell, on Bishop Vincent and his work, appeared in McClure's Magazine for August, 1895. It appears that he is descended from a Huguenot family which was driven to America by the revocation of the edict of Nantes. He was born in Alabama, February 23, 1832, and was early consecrated to the Christian ministry, which for him embraced not only the Gospel, but the ministry of higher popular education. He owed much to the early influence of his mother, and has recorded in a little memorial volume the following words: "My mother was an incarnation of consistency, fidelity, self-sacrifice, and serenity. I never heard her speak one harsh or foolish word."

From Alabama the Vincent family removed to Pennsylvania when the boy was only 6 years old. He was educated at home and in the best schools of his neighborhood. Good reading, close communion with nature, and association with people older and wiser than himself early matured his mind and judgment. He became a school-teacher at 15 and a minister at 18. He traveled on circuits, read eagerly, and determined to devote his whole life to liberal studies in connection with his ministerial labors. Not having enjoyed a college education, he sought to secure the equivalent by private study, special teachers in Greek and Hebrew and other subjects, and by foreign travel. His whole life has been for him an educational process. Books, men, nature have been his constant companions. The Chautauqua system of popular education is the historic outgrowth of an intensely human experience and of a practical knowledge of what the American people need.

In an article on Chautauqua, its aims and influence, published in the Forum, August, 1895, Prof. Albert S. Cook, of Yale University, thus speaks of one of the two founders of this great educational democracy:

"No account of Chautauqua would be complete without a word concerning the very pulse of the machine, John H. Vincent. On February 23, 1895, he was 63 years of age. In early life he became aware that he had an intellect and longed for culture; but he also had a conscience, and, with the views of life that had been instilled into him, gave up his dreams of college and betook himself to the work of the ministry. Though successful in this, he never ceased to educate himself by every means in his power, and pursued his own C. L. S. C. course long before he recommended a similar, though much less severe, one to others. Finally he arrived at the reconciliation of the two things—culture and religion—which he had been wont to think alien, if not antagonistic. He came to recognize God in nature and in human life as well as in the Bible. The reconciliation thus effected in his own soul is expressed in the motto inscribed on the banner of the C. L. S. C.: 'We study the word and the works of God.' He is spiritually minded, but possessed of an extraordinary fund of common sense. Patient, indefatigable, and decisive as an executive, he is winning and magnetic before an audience. He is a man of the people, and his heart goes out to them; he tickles them with his humor, warms them by his greeting, draws them by his sympathy, and fires them with his ideals. He is not only receptive of advice, but seeks it from every source. He aims to be the channel through which humane impulses shall accomplish their beneficent work. He is two men in one. As an organizer of victory, he has some of the characteristics of Napoleon. Yet he might equally be compared with such founders of mediæval brotherhoods as Benedict or Francis of Assisi. Comparisons like these must not, of course, be pressed. It is merely that certain qualities in him suggest their consummate embodiment in such celebrated names. More often I think of him in the same breath with Lincoln. 'God must love the plain people, he has made so many of them,' is a sentiment ascribed to the great President, and it is one that would sound equally appropriate in the mouth of the good bishop. Lincoln knew how to bide his time and not prematurely advance the day of great things. Lincoln relaxed the severity of duty with the kindly play of humor, and his approach to the people was largely through this channel. Habitually serene and good natured, he could be stern and resolute at need. In all these respects I trace a likeness between the two men. It was given to both to be in some sense, in different measure, it is true, the conduits of destiny, or, as they would have preferred to say, of Providence. Both will be remembered for their patriotism, their humanity, their catholicity, for both have borne, though under different circumstances and in different degrees, the burden of a people struggling upward, painfully and with many checks, to a serener vision and a larger life."

*Some of his views.*—At the fourteenth annual commencement at Chautauqua, August 21, 1895, after a noble oration to the graduating class by Mr. Hamilton W. Mabie, editor of the *The Outlook*, Chancellor Vincent made a few impromptu remarks, all the more characteristic because unstudied, and expressive of some of the deepest and final convictions of the educational leader of Chautauqua:

"I do not intend to make a protracted address. We had a good, solid, brilliant address this morning, to be long remembered for the emphasis which it placed on life and on character; for the emphasis which it placed on the educating power of simply being, for God is our teacher all the while. \* \* \*

"I said to myself, there are two or three things which we must be after. We must first of all pursue our course of reading, whatever it may be—professional reading by those engaged in professional lines, Chautauqua reading by those engaged as members of the C. L. S. C.; but, secondly, in connection with this, we must all begin to read some of the literature to which Mr. Mabie referred as the literature of life, by which we may be guided in the study of character, by which we may be brought into sympathy with those profound realities of human experience which we may all enjoy, and by which we may be uplifted and strengthened. We must read works of fiction, because that will bring before us, stimulating the imagination, creating ideals, warming the heart, making the will firm in purpose, the books which will give us deeper insight into life. But, thirdly, with our professional reading, with our special reading for the benefit of the imagination and the enrichment of the ideal, we must ourselves have experience in life and in the things which make for true life. It is one thing to read a book, it is one thing to hear a sermon, it is another thing to live out in personal experience the truth of the book or the truth of the sermon. Therefore, in my home, in my family, in my business with my neighbors every day, whether conditions are favorable or unfavorable, I must make bold war against myself and sin, and do my level best to be right and to help my fellow-men to be right."

#### OPINIONS OF CHAUTAUQUA.

[James A. Garfield.]

It has been the struggle of the world to get more leisure, but it was left for Chautauqua to show how to use it.

[William Cullen Bryant.]

I perceive this important advantage in the proposed organization, namely, that those who engage in it will mutually encourage each other. It will give the members a common pursuit, which always begets a feeling of brotherhood. They will have a common topic of conversation and discussion, and the consequence will be that many who, if they stood alone, might grow weary of the studies which are

recommended to them will be incited to perseverance by the interest which they see others taking in them. It may happen in rare instances that a person of eminent mental endowments which otherwise might have remained uncultivated and unknown will be stimulated in this manner to diligence and put forth unexpected powers, and, passing rapidly beyond the rest, become greatly distinguished and take a place among the luminaries of the age.

I shall be interested to watch, during the little space of life which may yet remain to me, the progress and results of the plan which has drawn from me this letter.

[Rev. Howard Crosby, D. D.]

Your scheme to induce business men and others to pursue useful courses of reading in science and history is worthy of all commendation. While we can not expect to make such persons scientists or scholars, we may expect them to become appreciative of things scientific and scholarly, and to be able to discriminate between the false and the true.

[Rev. John Henry Barrows, D. D.]

What John Calvin did for the higher education it will yet be seen that John H. Vincent accomplished for popular education.

[Rev. David Swing.]

The work improved upon a nearer view and a more careful study. With such a man as Bishop Vincent to lead the army, Chautauqua awakens, inspires, and transforms thousands of persons. It makes the young more thoughtful and makes education continue through life.

[Rev. Edward Everett Hale, D. D.]

After the general system of public school instruction, the Chautauqua system is the most important organized system of education at work in the nation. I see no reason why its range should not be extended much further. Indeed, I look to it for the accomplishment of John Adams's hope that every man and every woman in the nation might receive a liberal education.

[Rev. Lyman Abbott, D. D.]

No man in this country has done more to promote good habits of reading and thinking and resultant breadth of intelligence, and especially largeness of home culture, than Dr. John H. Vincent. The essential characteristic of the Chautauqua idea is the possibility of giving to those who can not take the collegiate education something of the collegiate horizon-largeness of view to those whom thoroughness of knowledge is impossible. This ideal has been more or less realized through Dr. Vincent in innumerable homes.

[Rev. John Hall, D. D.]

The place is attractive; the atmosphere is healthy; the arrangements are sensible; the variety of subjects touched is large, and many people, at less cost than they expend on ordinary summer vacation, can there enjoy intellectual, moral, and religious means of improvement of a high order. Bishop Vincent there, as elsewhere, has done much good.

[Phillips Brooks.<sup>1</sup>]

I am much interested in Chautauqua, and value very highly the work which it has done and is doing and will do for our people.

[Prof. H. H. Boyesen, Columbia College, New York City.]

I am a strong believer in the Chautauqua movement. It brings the light of knowledge and higher interests to thousands, nay hundreds of thousands, who have had scant opportunities for culture in childhood and youth. It elevates and dignifies their lives, lifting them out of the dull routine of soul-crippling toil and giving them an appreciation of spiritual and intellectual value. The intellectual activity into which they are stimulated through the agency of the Chautauqua lectures, books, and periodicals is making itself felt as a power for good in many communities throughout the land.

[Rt. Rev. Boyd Vincent.]

Fifty years ago Thomas Carlyle said: "The true university of these days is a collection of books." It seemed a most paradoxical statement right in the face of all existing ideas and facts. Universities had always been collections of men, of professors and students. Thirty thousand students went to hear Abelard lecture. "Give me President Mark Hopkins sitting at one end of a log and myself at the other," said a Williams College student, "and I have all the university I want." But Carlyle was right, after all. "The facility of getting books, the facility of distributing the knowledge of books, has changed the whole conditions of the business from top to bottom." His paradox has already become a reality, combining both advantages in one, and its name is Chautauqua—"the Chautauqua university system of education." I glory in it for my own name's sake. I rejoice in it for the sake of every fellow American. (Sermon at Chautauqua, August 6, 1893.)

[Dr. Edward Eggleston.]

I think Chautauqua was the beginning, perhaps, of that extraordinary intellectual movement that has been agitating the people all over

---

<sup>1</sup>One who heard Phillips Brooks preach at Chautauqua writes: "Those of us who were at Chautauqua in 1888 and heard that wonderful sermon by Phillips Brooks on Christ the Perfector of Humanity will never forget it. I remember very well the testimony of a prominent Englishman who sat by my side during the service. Said I to him: 'What do you think of that sermon?' Said he: 'I don't know what to think. I am stunned, overwhelmed. I have heard all of our great preachers, Liddon, Spurgeon, Newman Hall, etc., but I never heard anything like that.'"

this country and Europe. I do not know any other country in the world where so many grown people are seeking to improve their minds as in this country to-day. \* \* \* There are two forms of intellectual activity. There is that for which Bishop Hurst stands in the building of the great university at Washington. The university stands for the acquisition of knowledge. Chautauqua stands as the great diffuser of knowledge \* \* \* in a democratic way, to the busy people who can not and never could go to the university. That is a magnificent idea, and it is magnificently realized in some ways to-day; that diffusion is taking place through our country, and that diffusion reacts again upon scholarship. (Recognition day, August 23, 1893.)

[A. M. Fairbairn, principal Mansfield Colleg. Oxford.]

Bishop Vincent's work at Chautauqua seems to me wise, statesman-like, and beneficent. It is only the most superficial who fail to see into the heart of things that can speak of it with disrespect. It does not profess to be a substitute for academic culture or the higher education, but it does profess to regulate the reading of thousands and to direct into useful and thoroughly helpful channels intellects and interests that would be wasted by either dispersion, undue distribution, or neglect. If out of 60,000 readers controlled more or less by Chautauqua 10,000 could have selected their own literature, 50,000 at least would have simply, by miscellaneous and discursive and often idle reading, wasted their time and still more dispersed their intelligence. Bishop Vincent, by guiding their reading for a few years, helps to form habits of study, guides them in wide selection of books, and enables them, instead of merely using fiction to fill a vacant hour, to use literature to furnish the mind. Chautauqua is an attempt to carry educative, religious literature into the homes and into the hearts of the people. It was a magnanimous enterprise to attempt; the success that has come to it has been thoroughly well-deserved, and there is no man I more gladly salute with honor. The men who from this side have visited Chautauqua have come away impressed with the work it does. It does not profess to be a university in the English or European sense, and no man would measure it by such a standard, but what it seeks to do no university here has ever thought of doing. \* \* \* I hail Chautauqua as one of the great means of spiritualizing America, of creating within it a people devoted to high ends, to holy purposes, to rich aspirations. May it multiply and grow, and out of the high ends, the readings, and the studies may a new, great, moral, and spiritual people grow up, and in those days the name of Bishop Vincent will not be forgotten.

[William R. Harper, president of University of Chicago.]

I have been intimately connected with the details of the Chautauqua work. I have had the best possible opportunities for discovering its weak as well as its strong points. I have come in contact with all the different classes of students and readers who have come under the

influence of the Chautauqua instruction. Still further, I have been in a position to judge of the spirit of the work, whether looked at from the point of view of the management or of those who have been assisted, and I have become thoroughly acquainted with the principles underlying the movement. I mention these things in order to show that, although an outsider, I speak with a knowledge of the facts which only one from the inside could possess.

The work inaugurated by Bishop Vincent and Mr. Miller has, in my opinion, already exerted an influence beyond all possible estimate. This influence, while primarily of an intellectual character, has been also in the truest sense moral and religious. The movement has exerted in a thousand ways an indirect influence which can not possibly be indicated, although it can very clearly be felt. That it has been in any sense a rival of any kind of intellectual work is absurd. On the other hand, it has supplemented intellectual work already being done, has led many to undertake a higher grade of intellectual work, and has imbued the minds of multitudes with a desire for intellectual discipline, the thought of which had not before entered their minds. That Chautauqua in the future will become more and more a power can not for a moment be doubted. (Mail and Express, February 22, 1890.)

[Dr. J. L. Hurlbut.]

There are two things that have brought me to Chautauqua. There are two great facts of this movement represented by this gathering here to-night, and those are the two great facts which bring together nine-tenths if not ninety-nine hundredths of the people who come here. One is the great fact that Chautauqua helps to bridge over the great gulf between the illiterate and literate classes; between the multitudes of people who do not read, and therefore do not think, and the comparatively few who are leaders and thinkers. \* \* \* But there is another great thing that Chautauqua has done. It has, more than any other institution of our time, made popular the study of the word of God, and because Chautauqua lifts people out of ignorance into intelligence I rejoice in it, and I pray a thousand blessings upon it now and in the years to come. (Chautauqua's twenty-first anniversary, August 7, 1894.)

[Dr. R. D. Roberts.]

I want to call your attention to a very interesting circumstance. The university extension movement in England reaches its majority this year. We are one year older than you are in America. Here are two movements that started in countries thousands of miles apart and quite independent of each other. We knew nothing of what you were doing and you knew nothing of us, yet fundamentally the two movements had the same great purpose. They march along the same lines, studying to the same end, increasing these means for all. That is a curious circumstance. It shows that these two movements are the

natural outcome of forces that lie deep down in the very roots of society. They have grown, they have evolved, they are growing. No one can tell how great a future may lie before them. I come here hoping to learn something from your way of doing things. You in America have taken some hints from us and we are helping one another, and we are marching to the same great end. (Address at Chautauqua, August 1, 1893.)

### PART III.—THE CATHOLIC SUMMER SCHOOL OF AMERICA.

One of the most interesting and hopeful developments of higher popular education in America may be seen in the Catholic Summer School at Plattsburg, N. Y. The adoption of the Chautauqua idea by Catholic educators, with the approval and encouragement of the present Pope, shows the wonderful adaptability of the Chautauqua system, as well as the progressive tendencies of Catholicism in this country. The New York Sun, commenting, May 29, 1892, upon the original project of "The Catholic Chautauqua" at New London, Conn., said editorially: "The camp meeting idea has borne rich and abundant fruit, but the most remarkable of all is this Roman Catholic enterprise. By means of it the Catholic Church may be brought into sympathetic relations with the purely American spirit and with American methods and traditions, which will have a powerful influence upon its future in this country. The establishment of a Catholic Chautauqua is an event of high importance and great significance."

### INFLUENCE OF CHAUTAUQUA.

The close connection between this new educational enterprise and the historic Chautauqua is clearly indicated by the following extracts from an article by Mr. Warren E. Mosher, secretary of the Catholic Summer School of America, who, with other writers, contributed to *The Rosary* in 1894 good accounts of the beginnings of the whole movement:

"A retrospective view of the Catholic Summer School of America takes me back to an evening in the fall of 1885, when, for the first time in my life, the Chautauqua system of education was brought to my attention. The information was imparted to me by a friend who had just joined a Chautauqua reading circle, and who urged me to become a member also. This I was very willing to do upon learning of the many advantages of the system.

"At the first meeting of this circle which I attended I was favorably impressed with the methods of the Chautauqua Literary and Scientific Circle, this being the title of the department of reading circles under the Chautauqua system, and from that time the desire took possession of me to institute such a system of popular education for our Catholic people.

"For four years I was a member of this local Chautauqua circle, in the management of which I took an active part, serving as presiding

officer two years. The study of the system occupied much of my attention, and I became familiar with its various departments, including the reading circle, summer school, college of liberal arts, and other departments. As the knowledge of this vast and admirably planned institution grew upon me, the difficulties of establishing a similar one on Catholic lines seemed overwhelming. The opportunity to make the attempt to organize did not present itself until the spring of 1889, when, after consultation with my pastor, the Rev. E. Mears, an organization was effected on April 6, and the institution named The Catholic Educational Union. Father Mears was its first president. He was succeeded by the Rev. Morgan M. Sheedy, of Pittsburg, Pa., the present incumbent. About two weeks previous to the establishment of the Educational Union a Catholic reading circle was formed, for the purpose of giving an object lesson of the system. This circle was called The Home Reading Circle, and still exists.

"Intelligence of the aim and methods of this union was spread throughout the land through the Catholic and secular press, by correspondence and personal visits to many places by myself. The project met with much favor and encouragement, but obstacles barred its progress also at every turn. There was not a dollar behind the institution, yet I had determined to devote my whole time to the enterprise and make it a life work.

"In October, 1889, a number of circles which had been organized under the auspices of the Educational Union entered upon the course of reading prescribed. From the time of the establishment of the union until January, 1891, the connection between the various circles and the union was kept up by means of leaflets issued monthly, containing the order of reading, directions, etc. In January, 1891, the first number of the Catholic Reading Circle Review, official organ of the union, made its appearance."

#### A CATHOLIC CHAUTAUQUAN.

The above Review mentioned by Mr. Mosher reminds one of the magazine called The Chautauquan. It is edited by Mosher himself who deserves great credit for his successful enterprise. The Review is published monthly at Youngstown, Ohio, and is the recognized organ of the Catholic Summer School as well as of the Catholic Educational Union. As in the Chautauquan, general and required readings are published in this Catholic Review. It contains valuable articles relating to history, science, religion, literature, art, and philosophy. Some of the leading Catholic scholars in America contribute to its columns. Its influence must be for good upon the development of general intelligence and a broader culture among its American readers. There is a reading-circle department in the magazine for the guidance and encouragement of local literary societies. There is also a Catholic teachers' council for the discussion of educational questions of a practical character and for the dissemination of correct ideas of pedagogy.

It was through the Catholic Reading Circle Review, founded by Mr. Mosher in 1891 and still edited and published by him, that the idea of a Catholic summer school was most strongly promoted. Two features of Chautauqua had already been reproduced: (1) Reading circles, pursuing a definite and prescribed course under central direction; (2) a monthly magazine devoted to the educational interests of the Catholic Educational Union, which corresponds to the Chautauqua Literary and Scientific Circle.

#### DEVELOPMENT OF THE PROJECT.

The idea was for some time under discussion, but, according to Mr. Mosher, it was not until January, 1892, that the project was given public mention. This was in the shape of a letter to the Catholic Review, of New York City, by the Rev. James F. Loughlin, D. D., of Philadelphia:

"A few weeks ago Mr. W. E. Mosher, the secretary of the Catholic Chautauquamovement and editor of the Catholic Reading Circle Review, consulted with me as to the feasibility of choosing some desirable place where the Catholic educators of the country and those who are interested in reading circles might assemble during the summer vacation and devote some time to the discussion of educational matters, listen to addresses from prominent and experienced teachers, etc. With that characteristic of American Catholicity which immediately 'sits on' everything which looks like a novelty, I answered bluntly that 'the project was visionary.' 'The time may come,' said I, 'when such schemes may work, but not in the present posture of affairs.' I venture to say that ninety-nine out of every hundred Catholics in the country would have treated the proposition precisely as I did, for there are few of us who feel able or willing to 'run a hotel.' And yet, when we take a second thought, what is there wild or impracticable about Mr. Mosher's project? There has been an immense and widespread awakening of interest during the past couple of years in the improvement of Catholic pedagogy and the cultivation of Catholic literature. How to perfect our schools, how to interest our young men and women in mental culture, are the questions uppermost in the minds of clergy and laity. Why not hold an informal congress for the discussion of such questions? And what better plan than a general assembly during vacation time? As the Catholic Young Men's National Union will hold its annual convention toward the end of August in the city of Albany, Mr. Mosher suggests that the headquarters of the Catholic Chautauqua might be fixed somewhere in that neighborhood, either on the Hudson or at Saratoga. Every Catholic interested either in the improvement of self or of Catholic youth might be invited to attend. A special invitation might be extended to that valuable and much neglected body, the Catholic teachers in the public schools."

From the time of the publication of the above letter the development

of Mr. Mosher's project was rapid. He says in the article already quoted:

"The matter was at once taken up and discussed in all its bearings. Many eminent prelates, priests, and laymen gave expression of their opinion in the Reading Circle Review, and a meeting was called under the auspices of the Educational Union at the Catholic Club, New York City, May 11, 1892. About 25 assembled in response to the call. \* \* \* The Catholic Summer School is the outgrowth of the reading circle movement, and the reading circle movement, as it now exists, may be said to have originated with the Chautauqua system, while the Chautauqua system, although in a modern guise, bears many traces of the system of education in vogue before the Christian era and carried to perfection under the influence of the church in the scholastic age.

"I have mentioned the Educational Union particularly because of my connection with that institution, but the Catholic reading-circle movement is not due altogether to the influence of the Educational Union. The establishment of Catholic reading circles was attempted shortly after the Chautauqua circles became known. In 1885 an attempt was made to carry on a reading circle in the Young Ladies' Sodality at Youngstown, Ohio, but it did not continue long. Other attempts were made in different places and with better success. In 1888 the establishment of Catholic reading circles was advocated by Miss Julia Perkins (recently deceased), of Milwaukee, Wis., through the Catholic World, and in June, 1889, the same magazine announced the establishment of the Columbian Reading Union, under the direction of the Paulist Fathers, having for its object the propagation of Catholic reading circles. The first attempt at organized effort, however, was made in 1889, with what success the reading public already knows."

#### ORGANIZATION.

The Catholic Summer School was organized in May, 1892, and held its first session, as proposed, at New London in July, 1892. The programme for the first season embraced many interesting and valuable features.

The first temporary president of the Catholic Summer School in 1892 was the Rev. Morgan M. Sheedy, of Altoona, Pa. The first president was Rev. James F. Loughlin, D. D., of Philadelphia.

In February, 1893, the Catholic Summer School received its charter from the regents of the State of New York, and in May selected Plattsburg, on Lake Champlain, for its permanent site. The land, some 450 acres, 2½ miles from the city, was presented by the Delaware and Hudson Railroad. The grounds, now called "Cliff Haven," fronting on Lake Champlain, have been laid out and improved to a considerable extent, although for the second, third, and fourth summer sessions, 1893-1895, most of the lectures and classes were held for convenience in the city of Plattsburg.

The first building erected at Cliff Haven was for administration purposes. It stands fronting the lake at the northeast corner of the ground and cost about \$2,500. It contains an auditorium accommodating about 300 people. The managers intend to build a chapel on a beautiful forest knoll overlooking the water, and to christen the chapel "Our Lady of the Lake." A larger auditorium is in prospect. Cottages are now planned, with boarding houses and restaurants. Soon we may expect to see reproduced at Cliff Haven, on the border of Lake Champlain, an academic village worthy of its historic prototype on Lake Chautauqua.

In August, 1893, the Rev. Thomas J. Conaty, D. D., of Worcester, Mass., was elected president, and he has since continued in that elective office. Clergy and laity appear to be about equally represented on the present board of trustees. The summer school at Plattsburg is under the direction of the Catholic Church. Bishop Gabriels, of Ogdensburg, in whose diocese the school is planted, is its ordinary or episcopal superior. Archbishop Corrigan is the metropolitan, for Plattsburg is in his ecclesiastical province.

#### SESSION OF 1895.

The following account of the third session of the Catholic Summer School was written by the Rev. Morgan M. Sheedy, of Pittsburg:

"The third session of the Catholic Summer School of America opened July 14 and closed August 13, 1894. It was in every respect the most notable and successful assemblage of the students and friends of higher education on strictly Catholic lines who, during the past three years, have been following the summer school course of lectures.

"In the increased attendance over preceding years, in the widely separated sections of the country represented, in the range and variety of the subjects discussed, all of which were of present and practical interest, in the growing favor with which the summer school idea has been received by the clergy and hierarchy of the church, which was manifested by the presence of priests and bishops deeply interested in the daily work of the school, in the many pleasant reunions of former students of college and academy and the happy hours of sweet intercourse of highly cultivated men and women, in the beautiful spirit of social harmony that prevailed everywhere, there was nothing wanting to make the session that just closed at Plattsburg, on the eve of the feast of our Lady's Assumption, the most successful in the short history of the Catholic Summer School.

"In the brief space allotted to the writer it is only possible to note a few things that contributed to this success. The increased attendance was largely due to the conferences of reading circles held last winter and spring in Boston, Philadelphia, Rochester, New York, and Chicago. In these conferences the work done at the summer school and the means of doing it were fully and clearly set forth. The aims and objects

of the school were made known to Catholic students interested in the problems that are at present stirring men's souls; and many were desirous of knowing how those problems were to be met and answered by Catholic teachers, men of rare and acknowledged ability, each in his own department of science, art, history, law, philosophy, and religion. Accordingly they came in large numbers and set themselves down by the placid waters of Champlain to drink in, during the four weeks of the session of the school, truth and wisdom.

"As was to be expected, the majority of the students came from New England and Middle Atlantic States, though there were representatives from States as far west as Wisconsin and as far south as Kentucky and Louisiana. Brooklyn, among the cities of the country, had the honor of having the largest delegation, while New York, Rochester, Buffalo, and Boston sent a large number of students. The personal efforts made by individuals was also felt in this year's attendance. Those who come one year return home determined to make known to their friends the many advantages to be gained by attendance at the school.

"Of the lectures there is space only for a short summary. By reference to the syllabus we find a wide range and much variety. Ethics, law, science, American institutions, Catholic literature, early educators and missionaries, studies among famous English authors, work in Sunday schools, social problems, young men in public life, astronomy, Christian art, Catholic organization of intellectual forces, artists and their masterpieces—these were the subjects discussed during the first three weeks of the school. The fourth week, which was chiefly intended for teachers in our schools, had a special normal course, a series of lectures on logic and psychology, language and literature, mathematics, history, and a series on the Bible and the encyclical of Pope Leo XIII on the study of the Scriptures. This list will give the reader some idea of the value and importance of the work done at the school. It is no child's play, nor is it a hard task voluntarily imposed by those in attendance, for the subjects that may be considered difficult and abstruse are, by the skillful treatment of the lecturers, so handled as to be easily comprehended by the ordinary mind.

"Not the least important, and certainly one of the most pleasing features of the school, was its social side. There were many receptions to distinguished friends and visitors, such as those tendered to his grace the Most Reverend Archbishop of New York, to the bishop of the diocese, to Bishop Watterson, and the newly consecrated Bishop of Albany, N.Y. There were readings, musicales, and a special reception to the Catholic authors and writers present at Champlain. Various excursions to points of interest in this historic and romantic region—to Au Sable Chasm, to Saranac, to Montreal, Burlington, and to the shrine of Ste. Anne de Beaupré, which were undertaken by the whole school or by small parties—filled in profitably and pleasantly, indeed, the hours needed for recreation and rest. \* \* \*

"What rendered this session most notable was the laying of the corner stone of the new administration building on the ground of the school by Archbishop Corrigan, of New York, on the afternoon of Sunday, July 29, and the communication to the school, by the apostolic delegate, of the letter of the Holy Father approving the movement. We subjoin both the letter of Archbishop Satolli and that of the Pope:

[Letter from Archbishop Satolli.]

WASHINGTON, D. C., July 14, 1894.

REVEREND DEAR SIR: With no little surprise I find that the letter of His Holiness Leo XIII commending with highest praise the Catholic Summer School of America has come to me. Most undoubtedly the institution over which you preside is one in every way worthy of commendation and encouragement. If before the session closes it be possible to visit you, I shall give you notice. Meanwhile be assured that I am ready and willing to render your Champlain school any service in my power.

Wishing you a full measure of success, I am, devotedly, yours, in Christ,

FRANCIS, ARCHBISHOP SATOLLI,

*Apostolic Delegate.*

Rev. THOMAS J. CONATY, D. D.

[The Pope's letter.]

*To our Venerable Brother Francis, Archbishop of Lepanto, Apostolic Delegate in the United States of North America, Washington, D. C.*

Venerable Brother, health and apostolic benediction: It has recently been brought to our knowledge that, among the many movements so opportunely set on foot in the United States for the increase of religion, a Catholic summer school, through the cooperation of clergy and laity, has been established on Lake Champlain, at Plattsburg, in the diocese of Ogdensburg. We have also learned that the school has been affiliated by the board of regents of the University of New York, and empowered to confer degrees upon those who follow its courses of study. There were many reasons for the founding of a school of this kind; one affecting the good of religion, that Catholics by their union of thought and pursuits may the more effectively defend the Catholic Church, and induce our brethren who are separated from us concerning the Christian faith to make their peace with her; another, that by means of lectures from learned teachers the pursuit of the highest studies may be encouraged and promoted; finally, that through the principles laid down by us in our encyclical on the condition of labor, and by their practical illustration and application, the peace and prosperity of your fellow-citizens may be secured. We are aware that bishops have been the promoters of these things because they saw that in many ways notable benefits would result therefrom. Moved, nevertheless, by our great desire that the best interests of the people of the United States may be furthered by the constant addition of new helps, we are pleased to give our commendation to the trustees of this summer school, and to exhort them not to depart from the road which they have already taken, but to go forward in it with braver confidence. Since we have been informed, also, that in a short time the third annual session of the school will be held, and that bishops, priests, and members of the laity will be present, we send to those who will attend our heartiest greeting, praying God to bless their undertaking and purposes. We trust, venerable brother, that in this your aid will not be wanting, and that by constant assistance you will encourage these assemblies of Catholics, and see that the largest benefits accrue therefrom to religion and good citizenship. May the apostolic benediction, which we impart most lovingly, be an earnest of the many heavenly blessings with which we pray the Almighty to reward your zeal, and that of the other bishops, priests, and people.

## SESSION OF 1895.

A syllabus of lectures, given at the Catholic Summer School at its fourth session, July 6 to August 19, 1895, was published in the shape of a small pamphlet of 40 pages by D. C. Heath & Co. It contains also the names of the board of trustees, the executive committee, the board of studies, the directing board of the Reading Circle Union, and the women's auxiliary committee.

A noticeable effort has been made at Plattsburg to systematize popular instruction. The lectures are all arranged in courses, each with an elaborate and printed outline for the convenience of students. No single lectures find a place in the schedule. Three distinct courses were given each week of the summer session in 1894. The mistake of surfeiting the public was not made. To illustrate the plan of work the following examples will suffice:

The first week there was a course of five lectures at 9.30 a. m., by the Rev. W. H. O'Connell, of Boston, upon the "External relations of the early church." At 11 a. m., from Monday till Friday, there were lectures on the "Philosophy of literature" by Conde B. Pallen, Ph. D., of St. Louis. On four evenings in the week there were popular scientific lectures by Rev. T. J. A. Freeman, of Woodstock, Md. Saturday evening was usually devoted to social receptions or other festivities.

There was manifest method and continuity in the make-up of the programme from week to week. The "Internal development of the early church" was presented by James F. Loughlin, D. D., of Philadelphia, in a course of five morning lectures. Then followed the beginnings of English literature, French literature, Spanish colonization of America. Evening lectures on popular science gave way to lectures on the Bible. As at Chautauqua, so at Plattsburg, manifestly great importance is attached to religious as well as to scientific studies. "The impetus," says Dr. Conaty, "that has been given to the study of the Bible by the recent encyclical of Leo XIII called for a special line of work upon the sacred Scriptures."

Lighter and entertaining subjects were not left out of the programme. Col. Richard Malcolm Johnston, that charming story-teller from Baltimore, gave a course of five lectures on the "Evolution of the novel." The history and evolution of music were illustrated in a pleasing manner. The possibilities of this kind of popular education are just dawning upon the American cities and summer schools. The history and philosophy of art were represented at Plattsburg in evening lectures.

Special courses were also offered in drawing, elocution, cooking, botany, and other popular subjects. In a résumé of the summer's work, published in the Worcester Spy, August 25, 1895, the Rev. Dr. Conaty, president of the school, said: "Miscellaneous subjects, the single lecture, the ordinary topic of current interest, all were carefully eliminated from the programme. It was felt that the summer-school

idea was not so much to please the fancy or to follow the facts of everyday society, nor to scatter the thought of the students over a variety of matters, but rather to concentrate thought upon a definite line of study which would give to the summer school something of the character of a systematic college instruction, covering a period of years. \* \* \* The programme had in it a harmony of thought and a unity of purpose. The subjects were subjects which commend themselves to the higher lines of thought and adapt themselves as well to the ordinarily educated mind."

Regarding the social side of the Catholic Summer School, its president remarks: "The receptions given by the ladies on the Saturday evenings of the session have been sources of delight and pride to the school, for they have proved that among our Catholic people there is an undeveloped social strength, which gatherings like the summer school will tend to develop. Catholics coming together from all sections of the country are led to know one another better, to become acquainted with the men and women who have earned distinction in lines of study and success, men and women of literary prominence, distinguished in church and state, and thus the social elements of the Catholic people are welded together into a mighty mass, which must tend toward the uplifting of our people into that position which they should occupy as a part of this great nation."

The attendance upon the summer session in 1895 was highly gratifying to the friends of this Catholic school. About 1,500 different persons were registered. They came from regions as far west as Salt Lake City; from Canada on the north and Florida on the south. Twenty-eight States were represented. New York led with 713 students. Massachusetts sent 190; Pennsylvania 55. New York City and Boston had the largest municipal delegations, although Brooklyn, Philadelphia, Buffalo, Rochester, Springfield, and Worcester were not far behind. When the accommodations become more adequate, when cottages and summer hotels are erected at Cliff Haven, we may expect to see an even larger attendance. The Catholic Summer School meets a recognized want for both clergy and laity. It will afford a popular retreat from the routine labors and social or business distractions.

There is something irresistibly attractive to human nature in the idea of a summer encampment on lake or stream. Men like to get away from towns and cities and to enjoy communion with nature. When to the charms of the lake shore are added the comforts of home life, the attractions of literature, art, and music, neither the creature discomforts of savage life in the woods nor the jejune pleasures of the summer hotel, with all its piazzas and social inanities, can successfully vie with the summer school, if rightly managed, as a rational mode of recreation and enjoyment. One who has tried the experiment will confess the advantages of pleasant intellectual occupation and of civilized life in summer vacation over social dissipation and expensive savagery.

## FUTURE OF THE WORK.

The Rev. Thomas J. Conaty, now president of the Catholic Chautauqua, writes concerning its future:

"The Catholic Summer School of America is an assured fact. Catholics have long called for it, and in its existence it corresponds, in some measure, to their ideas, and satisfies their desires. They have recognized its necessity and its usefulness, and now they are appreciatingly grateful for the efforts made to establish it. As an intelligent force in Catholic educational work it has demonstrated its power. It is not a college, much less a university, but it aims by lectures and correspondence to give opportunity for study along special lines of advanced thought; to open up fields for research in science and philosophy; to bring together representative teachers of all branches of learning, who will give to students the results of life work; to unite in social intercourse Catholics from different parts of the country; in a word, to mold a Catholic student element into a strength and influence for good which will save not merely the individuals composing it, but will reach out into society and save it. This will redound to the credit of the church and provide able and intelligent defenders of sacred truth against the falsehoods of heresy and agnosticism. The purpose of the school is to supplement and complement the work of education, so well cared for in our schools and academies. It will serve to repair, on the one hand, the injury done by defective education, and on the other to broaden and more generally embellish what is already good. It reaches out to our busy men and women and offers them the privilege of special study which will supply for them much which they long for but can not obtain without great danger to the principles of truth and right action. In this the prospective of our summer school is that of a quasi-university of special knowledge—a people's university—to enter which the only requisite is heart and mind seeking greater light and fuller development of truth. The colleges and universities which train the minds and hearts to the enjoyment of higher education open their doors to the very few who alone have time, means, and ambition to pursue their courses of study. Shall the many be left to content themselves with the pittance which comes from fewer years at school? Has higher education nothing for them? The summer school answers that ambition. Desire for self-improvement among the people, even among those who have already received more than the average, must be and is answered in the summer universities, where all tastes are sought to be satisfied. The movement is in its infancy among us Catholics, but Chautauqua has demonstrated its usefulness and its success. Its possibilities are as vast as the wants of our people. It may become an attachment of school, academy, college, and even university. It may serve as a valuable assistant to lyceum and association, to literary,

scientific, and philosophical research in reading circle or at the fireside of one's home. It brings at once into our private and public Catholic life the results of the intellectual endeavors of our best scholars, our most profound thinkers, who, under the inspiration of our holy faith, have sounded the depths of secular knowledge, and who come to us with arms full of sheaves of ripe scholarship with which to ornament the education of our schools and homes. The prospective of the Catholic Summer School is a parent home by the banks of the beautiful Champlain and branch schools throughout the country, permeating our social life and bringing near to our people, in all sections of our great country, the many advantages which have now to be sought for at much sacrifice.

"Champlain, the first attempt of Catholics, is the pioneer school—first missionary, as it were, in the endeavor for higher education for the people. We are but sowers of the idea, reaping, indeed, some of the results; but those who come after will reap them in the fullness of a ripened harvest. A college city, a university town, will rise up upon the banks of the lake; halls of science will welcome to their lecture rooms the thousands of students who, like pilgrims of old, will journey thither seeking knowledge. Hospitality will spread its pleasant cheer before all, and enjoyment and mirth will make the hours of relaxation pass amid the joys of innocent friendship. Days will come and go, and learned travelers will delight the student world with the tales of discovery and research; philosophers and seers, with the illumination of faith upon their words, will separate the dross from the gold in the principles of life; and a purer and higher knowledge of God and of themselves will come to the earnest seekers. The warriors of faith, while discoursing of the deeds of old, will help prepare the weapons of defense for all to use in the battles of the present; builders of a true life will train mind and heart in the skill necessary for the building of the structure of faith. In a word, the Catholic Summer School of America has a future which may be made a potent factor of our religious and social life as American Catholics, opening to them their place in the great intellectual movement which is destined to bring to our church and our people the treasures of mind and heart which truth transmits across the ages as our inheritance. Our duty is to drink deep at its springs, equip ourselves well for our responsibilities as American Catholics, and, by the true education of intellect, add luster to our church, happiness to our homes, and salvation to our great and glorious country.

"Its location, somewhat remote from the haunts of great travel, is an advantage in the exclusiveness of student life which it guarantees. None but those who are in sympathy with the work will seek its quiet shades. It will have no attractions for those governed by curiosity or pleasure alone, and the earnest student will not have his life marred by the interruptions which come from hordes of pleasure seekers.

Education itself makes the community exclusive, and that which is purchased with sacrifice is most appreciated. Our Catholic Summer School in its future is the home of Americans seeking all that truth can give."

#### CATHOLIC READING CIRCLES.

The following suggestions for organizing and conducting reading circles have been published in the Catholic Reading Circle Review. They are very practicable, and may be applied in any neighborhood where there is social intelligence:

"A reading circle is several or more persons who meet together for mutual intellectual help and improvement. A circle may be confined to the family circle; it may be formed among members of a sodality or other organizations, or it may be made up of persons of many organizations. It may be exclusively of young men or young women, or both, and it may include old and young. They may be formed in academies and colleges for supplementary reading, and by alumni societies.

"A circle may be formed by calling a public meeting through the press or by an announcement in the parish church, or it may be formed by a few persons quietly, and the membership limited. No person, however, should be excluded. Generally better results are obtained in circles of not more than thirty members than in larger circles, but there are successful circles of the C. E. U. [Catholic Educational Union] with more than fifty members.

"The organization should be simple, and so conducted that all may feel at home and take part in it.

"The officers usually are a president, vice-president, secretary, treasurer, and a programme committee. As much of the success of a circle depends upon its officers, care should be taken in their selection.

"Adopt a constitution containing only the simplest rules necessary for system and order, and select a name and motto significant and appropriate.

"Small circles sometimes meet at the homes of the members in turn. A permanent meeting place is generally found in a pleasant room of some association.

"Meetings should be held weekly, if possible.

"The manner of conducting a circle has much to do with its success. There are as many ways of interesting and instructing a circle as there are successful methods of conducting classes in schools and colleges.

"The requirements of circles are as varied as their membership, and leaders must select and follow methods suitable to their special needs.

"The following plan has been tried with success:

"A leader is appointed for each study, and the responsibility of conducting exercises on the study placed upon him.

"The circle is divided into sides, and a competition entered into for the following credits:

"(1) Attendance at meetings.

"(2) Promptness in being present at the appointed time.

"(3) Responding to the roll call with a quotation.

"(4) Performance of duties assigned.

"(5) Keeping up to date with the required reading prescribed by the C. E. U.

"(6) When discussing current events to relate some matter of current news not previously mentioned at the meeting.

"(7) Answering the question drawn at the previous meeting from the question box.

"The president, who is not on either side, keeps a record of the merits, and at the end of the year's reading the winning side is banqueted by the losers."

## CHAPTER XX.

### PENSIONS FOR TEACHERS.

---

It has not been the custom in this country to pension civil officials, but of late years a movement has been on foot among teachers to promote the payment of annuities or pensions to teachers disabled by illness or old age. In a few cities this movement has resulted in laws passed by the legislatures of the respective States which authorized the city authorities to raise a pension fund, the proceeds of which are to be used in paying pensions to teachers after a certain number of years of service. The intention is evidently to secure a longer tenure of office to teachers, to weed out disabled persons, and secure better talent by holding out the inducement of provision for old age or sickness.

The following is an extract from the fifteenth annual report of the superintendent of Boston public schools. It states the conditions prevailing in Massachusetts, or rather in Boston:

*The Boston Teachers' Benefit Association.*—Among the unsolved practical questions connected with the public school service in large cities is that of making suitable provision for superannuated teachers. Men and women who have spent the prime and strength of their lives in the public school service have claims to consideration which only the most barbarous could deny; and yet, as things are now managed, it is often impossible to regard these claims without sacrificing the best interests of the children in the schools. The problem is to devise some practical method whereby teachers who have passed their prime shall receive all merited consideration for long and faithful service, without at the same time impairing the efficiency of instruction in the schools. No one acquainted with our schools will affirm that there is any such method in use now. There are no pensions for those who retire; nor is there any way of giving reduced work and reduced pay, for a while, to teachers whose usefulness, though impaired, is not gone.

Several years ago the school committee took up this matter seriously, and devised a system of pensions for retiring teachers, but nothing came of it, except that the eyes of many people were opened to the need of some such system. The argument for a pension system does not rest alone or chiefly on the claims that long-trying and faithful servants have to considerate and merciful treatment, strong as these claims may be; it rests chiefly on the interest which the public has in securing the highest character and efficiency in the public school service. Probably the school committee could do nothing which would more enhance the dignity, the attractiveness, and the efficiency of the public school service in this city than to put in operation a good system for the gradual retirement and pensioning of teachers. Why should not the management of the public school service be as wise as that of the best colleges and the most successful private corporations? The professor emeritus is paid a salary (a reduced salary, perhaps) more in consideration of his past than of his present

service. Would it not be a wise policy to encourage teachers with the prospect of a like dignified and honorable retirement after long and faithful service? Would not the schools be enough better managed and taught to make it in the long run an economical policy?

In the school system of a great city it should be impossible to distribute duties in such a way that less exacting cares may fall to the share of those who, though already worn, are not yet wholly incapacitated for useful service; and if well-managed private corporations find it for their pecuniary advantage to take good care of aged and enfeebled employees, why will not the city gain by a similar policy—not money, indeed, but increased efficiency in the public school service? The difficulties in the way of beneficial action in this matter do not seem insurmountable—would probably sink into insignificance in presence of a hearty determination to overcome them. It may not be unreasonable to hope, therefore, that this vitally important matter may be taken seriously in hand by the leaders in city and State affairs. Boston and Massachusetts should lead the way in placing the public school service on a better basis than it has ever yet stood upon in this country.

So much I have thought it fitting to say by way of preface in a notice of the Boston Teachers' Mutual Benefit Association, an organization that has no official connection with the school committee, yet one which is doing a work that has a direct bearing on the welfare of the schools. I do not think that this voluntary organization of the teachers answers the needs I have pointed out; but it mitigates the ills that arise from the present irregular and haphazard mode of treating superannuated teachers. For the information which follows I am indebted to a member of the association.

The Boston Teachers' Mutual Benefit Association is based upon a similar organization in New York, the plan of which was brought before some of the teachers of this city in February, 1888, by Miss P. Catherine Bradford, of the Franklin School. In February, 1889, Granville B. Putnam, of the same school, brought the subject to the attention of the masters. As a result, a joint committee, consisting of 8 women and 8 men, was chosen, with authority to prepare a constitution and organize an association. At a meeting of the committee held April 27, 1889, an organization was perfected and a constitution adopted under the laws of Massachusetts.

In aid of the permanent fund of the association, a most successful bazaar was held in Music Hall for the week beginning December 5, 1892. The cooperation of public-spirited citizens, and especially of many of the philanthropic ladies of Boston, was secured, and as a result more than \$56,000 was added to the fund. Success has attended the association from the beginning. It has a membership of about 950 and funds amounting to about \$80,000. Most of this is invested in first mortgages in Boston and immediate vicinity. The income from assessments of members is about \$8,000 a year and from investments nearly \$4,000. The \$12,000 of annual income thus secured is expended in annuities paid to disabled teachers, or those who, having taught for thirty-five years, desire to leave the service. About 50 teachers have thus received annuities amounting to 40 per cent of their salaries at the time of resignation.

But for this beneficent institution many of these teachers would still be in the employ of the city, although unable to do satisfactory work because of ill health or the infirmities of age. They have now given place to younger and more efficient teachers, and the city secures the benefit, while from the association they receive a comfortable income. Nor is this all. The nearly 1,000 members, feeling far less anxiety for the future because of membership, are daily doing better work than they could do if the shadows of coming adversities were ever resting upon them. Prompted by a wise forethought in guarding against their own possible necessities, as well as by a generous impulse to help associates in need, these teachers are banded together in the spirit of common brotherhood, a blessing to such of their number as shall avail themselves of its annuities, and a constant advantage to the schools which they have in charge.

The following is the text of a pension law passed by the legislature of the State of Illinois. The teachers of Chicago had proposed it and urged its passage:

AN ACT to provide for the formation and disbursement of a public school teachers' and public school employees' pension and retirement fund in cities having a population exceeding one hundred thousand inhabitants. Approved May 31, 1895. In force July 1, 1895.

SECTION 1. *Be it enacted by the people of the State of Illinois, represented in the general assembly,* That the board of education in cities having a population exceeding one hundred thousand inhabitants shall have power, and it shall be the duty of said board, to create a public school teachers' and public school employees' pension and retirement fund, and for that purpose set apart the following moneys, to wit:

1. An amount not exceeding one per cent per annum of the respective salaries paid to teachers and school employees elected by such board of education, which amount shall be deducted in equal instalments from said salaries at the regular times for the payment of such salaries.

2. All moneys received from donations, legacies, gifts, bequests, or otherwise, on account of said fund.

3. All moneys which may be derived from any and all sources: *Provided, however,* That no taxes shall ever be levied or an appropriation of public money be made for said fund except as herein provided.

SEC. 2. The board of education, together with the superintendent of schools, and two representatives to be selected annually by the teachers and employees of the public schools under control of said board, shall form a board of trustees, a majority of whom shall determine the amount to be deducted from the salaries paid to teachers and employees as aforesaid, and shall have charge of and administer said fund, and shall have power to invest the same as shall be deemed most beneficial to said fund, in the same manner and subject to the same terms and conditions as township treasurers are permitted to invest school funds in article (4) of an act entitled "An act to establish and maintain a system of free schools" in force May 4, 1889, and shall have power to make payments from said fund of annuities granted in pursuance of this act, and shall from time to time make and establish such rules and regulations for the administration of said fund as they shall deem best.

SEC. 3. Said board of education shall have power, by a majority vote of all its members, to retire any female teacher or other female school employee who shall have taught in public schools or rendered service therein for a period aggregating twenty years; and any male teacher or male school employee who shall have taught or rendered service for a period aggregating twenty years, and such teacher or school employee also shall have the right after said term of service to retire and become a beneficiary under this act: *Provided, however,* That three-fifths of said term of service shall have been rendered by said beneficiary within the limits of the municipality where said board of education has jurisdiction.

SEC. 4. Each teacher and school employee so retired or retiring shall thereafter be entitled to receive as an annuity one-half of the annual salary paid to said teacher or employee at the date of such retirement, said annuity to be paid monthly during the school years: *Provided, however,* That such annuity shall not exceed the sum of six hundred dollars (\$600), which shall be paid by said board of education out of the fund created in accordance with this act in the manner provided by law for the payment of salaries.

SEC. 5. Said board of trustees is hereby given the power to use both the principal and the income of said fund for the payment of annuities hereinbefore mentioned, and shall have power to reduce from time to time the amount of all annuities: *Provided,* That such reduction shall be at the same rate in all cases.

SEC. 6. The president and secretary of such board of education shall certify monthly to the city treasurer all amounts deducted from the salaries of teachers, special teachers, principals, and employees of the board of education in accordance

with the provisions of this act, which amounts, as well as all other moneys contributed to said fund, shall be set apart and held by said treasurer as a special fund for the purposes hereinbefore specified, subject to the order of said board of education, superintendent of schools, and two representatives, as aforesaid, and shall be paid out upon warrants signed by the president and secretary of said board of education.

SEC. 7. The city treasurer shall be custodian of said pension fund, and shall secure and safely keep the same subject to the control and direction of said board of trustees, and shall keep his books and accounts concerning said fund in such manner as may be prescribed by the said board. And said books and accounts shall always be subject to the inspection of the said board or any member thereof. The treasurer shall, within ten days after his election or appointment, execute a bond to the city, with good and sufficient securities, in such penal sum as the said board shall direct, to be approved by the said board, conditioned for the faithful performance of the duties of his office, and that he will safely keep and well and truly account for all moneys and profits which may come into his hands as such treasurer, and that on the expiration of his term of office he will surrender and deliver over to his successor all unexpended moneys and all property which may have come into his hands as treasurer of such fund. Such bond shall be filed in the office of the clerk of such city, and in case of a breach of the same or the conditions thereof, suit may be brought on the same in the name of said city for the use of said board of trustees or of any person or persons injured by such breach.

SEC. 8. No teacher or other school employee who has been or who shall have been elected by said board of education shall be removed or discharged except for cause upon written charges, which shall be investigated and determined by the said board of education, whose action and decision in the matter shall be final.

If at any time a teacher or school employee who is willing to continue is not reemployed or is discharged before the time when he or she would under the provisions of this act be entitled to a pension, then such teacher or school employee shall be paid back at once all the money, with interest, he or she may have contributed under the law.

*Detroit, Mich.*—The teachers of the city schools of Detroit secured provision for pensions from their State legislature in a clause of the school law passed in May, 1895, which contains the following provisions:

SEC. 27. The said board of education shall establish what shall be known as the public school teachers' retirement fund, which fund shall be administered according to such rules and regulations, by-laws, and ordinances as may be adopted by the board of trustees hereinafter provided for. The treasurer of said board is hereby given power to hold all moneys belonging to said fund and invest or pay out the same under the direction of said board of trustees as hereinafter provided. Said fund shall consist of:

1. All money, pay, compensation, or salary or any part thereof deducted or withheld from any teacher or teachers on account of absence from duty or any cause in accordance with the provisions of the rules of the board of education.

2. All moneys received from donations, legacies, gifts, bequests, or otherwise, for or on account of such fund.

3. All such other moneys as may be obtained from miscellaneous sources or appropriated or raised thereof by approval of the common council and board of estimates.

4. All percentages the said board shall deem reasonable and expedient to deduct from the salaries of the teachers in the public schools of said city, and which shall not exceed one per cent of the salary of each teacher.

5. All interest or income derived from the above moneys.

The board of education, together with the superintendent of schools and two representatives to be selected by the teachers of public schools, under control of

said board, shall form a board of trustees, a majority of whom shall determine the amount to be deducted from the salaries paid to teachers as aforesaid and shall have charge of and administer said fund, and said board of trustees shall have power to invest the same as shall be deemed most beneficial to said fund, and shall have power to make payments from said fund of annuities granted in pursuance of this act, and shall from time to time make and establish such rules and regulations, by-laws, and ordinances for the administration of said fund as they shall deem best.

On and after the passage of this act said board of education shall so amend its by-laws relating to the absence from duty of teachers as to provide that reasonable sums shall be deducted from the salaries of teachers on account of such absence from duty, and said sums shall be transferred to and become a part of said teachers' fund. Said board shall have the power to retire any teacher after said teacher has taught in said public schools during a period aggregating twenty-five years, and any teacher shall have the right to retire after having taught said period: *Provided, however*, That three-fifths of said term of service of twenty-five years shall have been rendered by said beneficiary within the limit of the municipality where said board of education has jurisdiction. Any teacher so retired by said board, or who may retire voluntarily, at the expiration of said period, shall be entitled to receive an annuity not to exceed the sum of four hundred dollars. The said board shall have the power, with the consent of any teacher, to continue to employ said teacher after the time when it can retire the said teacher as aforesaid. In computing said period of twenty-five years for the present teachers in said schools, they shall receive credit for the time they have heretofore taught in them, and said board may place upon the roll of retired teachers any one who has taught in said schools for thirty years. The president and secretary of said board of education shall once in three months certify to the treasurer of said board all amounts deducted from the salaries of teachers in accordance with the provisions of this act, which amounts, as well as all other moneys contributed to said fund, shall be set apart and held by the treasurer as a special fund hereinbefore specified, subject to the order of said board of education and superintendent of schools, and two representatives as aforesaid, and same shall be paid out upon warrants signed by the president and secretary of said board of education. It shall be the duty of said board, at the time it is required by law, to submit its estimates for each year, to report with said estimates the condition of said fund.

All acts and parts of acts inconsistent with this act are hereby repealed. This act is ordered to take immediate effect.

Approved May 22, 1895.

The constitution, by-laws, and rules of order of the board of trustees of the public school teachers' retirement fund of Detroit are here inserted as an illustration of the *modus operandi* for bodies of like import:

#### CONSTITUTION.

ARTICLE I. This organization shall be known as the board of trustees of the public school teachers' retirement fund of Detroit.

ART. II. The object of this board of trustees shall be to take charge of the public school teachers' retirement fund, and invest and pay out the same according to act 233 of the session laws of 1869, as amended by an act approved May 22, 1895, and according to rules and by-laws hereinafter provided.

ART. III. This board of trustees shall consist of the board of education of the city of Detroit, together with the superintendent of schools and two representatives to be selected by the teachers under the control of the said board of education.

ART. IV. The officers of this board shall consist of a president, a vice president, a recording secretary, who shall be the secretary of the board of education, and a

treasurer, who shall be the treasurer of the board of education of the city of Detroit, and the treasurer shall give bonds in such sum as the board may require.

SEC. 2. The officers of this board shall be selected for the term of one year, said election to be held on the first day in July in each year (except when such day shall occur on Sunday, in which case it shall be held on the day following). They shall hold office until their successors are duly elected. For the year 1895 such election shall be held on the 24th day of September, 1895, and the officers then elected shall hold office until July 1, 1896.

SEC. 3. The election of officers shall be by ballot, and a majority of the votes cast shall be necessary for a choice.

SEC. 4. Any vacancies which may occur among the officers shall be filled by the board of trustees, provided that the person chosen shall hold office only for the unexpired time he or she is chosen to fill.

SEC. 5. No member of the board of trustees shall receive any compensation for services. The compensation of the secretary shall be determined by the board of trustees.

ART. V.—SEC. 1. The president shall preside at all meetings of the board of trustees, and perform such other duties as may be imposed on him by the constitution and by-laws. He shall be ex officio a member of all standing committees.

SEC. 2. The vice-president shall preside in the absence of the president. In the absence of both president and vice-president from any meeting, the members present shall choose a chairman, who shall preside at such meeting.

SEC. 3. The recording secretary shall keep a record of all transactions of the board of trustees, send notice of meetings of the board of trustees to each member thereof, and attend to all the duties usually pertaining to the office, or that may be directed by the board of trustees.

He shall make a report at each regular meeting of the board of trustees of the condition of the finances of the board.

He shall prepare and furnish to the board of education a statement of its affairs for distribution, with the notices of the annual meeting; which statement shall comprise an account of the receipts and disbursements, and the balance in the treasury, a schedule of the property, the number of annuitants, and a list of the officers and of benefactors, and of deceased members.

SEC. 4. The treasurer shall receive all moneys of the fund from the secretary of the board of education, and also the proceeds of all stocks, bonds, mortgages, legacies, bequests, etc.

He shall deposit all moneys received by him in such ways as shall be designated by the board of trustees. All deposits shall be made in the name of the public school teachers' retirement fund.

All checks or orders on banks, savings institutions, or trust companies shall be signed by the president and the secretary of the board of education.

ART. VI.—SEC. 1. Any teacher having taught the time required by the act, who shall become either physically or mentally incapacitated for school work, shall be eligible to be declared an annuitant by the board of trustees, and upon being so declared shall receive an annuity.

Any teacher who shall complete a term of school service of twenty-five years, the last consecutive fifteen of which shall have been in the public schools of the city of Detroit, shall also be eligible to be declared an annuitant, and upon such action by the board of trustees shall receive an annuity.

SEC. 2. Any teacher desiring to be placed on the list of annuitants on account of having completed the required term of school service, shall make application in writing to that effect to the board of trustees.

SEC. 3. Any teacher desiring to be an annuitant on account of disability as provided in section 1 shall make application as above, and if such disability be established to the satisfaction of the board of trustees they may declare such teacher to

be an annuitant; but in case the said teacher shall marry, the annuity may, by a two-thirds ( $\frac{2}{3}$ ) vote of the whole board of trustees, be withdrawn from such member.

SEC. 4. No teacher shall be placed upon the retired list and continue to hold a position in any Detroit public school.

SEC. 5. Persons not engaged in teaching may, upon contributing ten dollars (\$10) or upwards, be elected honorary members of this board of trustees.

ART. VII.—SEC. 1. Any teacher who shall voluntarily leave the service of the board of education before having completed the term of service required by the act shall forfeit all right and benefit in the teachers' retirement fund.

SEC. 2. Any teacher discharged or dropped from the list of teachers by the board of education, except for misconduct, shall receive from the board of trustees the full amount of all moneys paid by said teacher to the credit of the retirement fund, less any interest which may have accrued.

SEC. 3. If any teacher, not an annuitant, shall die, the board of trustees shall pay to the heirs of such teacher the full amount of moneys contributed by such person to the retirement fund, less any interest which may have accrued thereon.

SEC. 4. Any teachers availing themselves of the benefits of the retirement fund shall be required to return to the secretary of the board of trustees from their annuity the sum of \$7.25 in annual payments, the aggregate of which shall be in the maximum equivalent to one per cent upon a salary of \$72.50 per month for the period of fifteen years.

The above shall apply to teachers who avail themselves of the annuity for the first year of its existence. Teachers who become annuitants subsequent to the first year will pay the sum of \$7.25 per year for as many years as are represented by fifteen less the number of years the retirement fund has been in existence.

ART. VIII.—SEC. 1. The annual meetings of the board of trustees shall be held on the first day of July of each year, and other meetings of the board of trustees shall be held in such places and at such times as the board of trustees shall direct.

SEC. 2. The president may call a special meeting at any time and shall do so upon the written request of six members.

SEC. 3. At all meetings of the board of trustees a majority of members elect shall constitute a quorum.

ART. IX. The board of trustees shall have authority to convert moneys donated for any specific purpose to the objects for which such donations may be made.

This constitution may be amended by a three-fourths ( $\frac{3}{4}$ ) vote of all the members voting. Notice of the proposed amendment shall be given at a meeting of the board of trustees, or sent to every member, not less than ten days previous to the taking of a vote thereon.

#### BY-LAWS.

1. Regular meetings of the board of trustees shall be held on the first Monday in October, December, February, April, and June of each year in the rooms of the board of education.

2. There shall be standing committees as follows: A committee on finance, consisting of five members; a committee on bonds and investments, consisting of five members; a committee on annuitants, consisting of five members; a committee on judiciary, consisting of five members.

3. The president shall appoint said committees as soon after the annual meeting in each year as practicable, and they shall hold office until their successors are appointed. The president shall fill all vacancies in standing committees.

4. The finance committee shall have supervision of the finances of the board of trustees.

All statements of receipts and expenditures shall be referred to this committee. No money shall be put out or loaned except on a favorable report of this committee. All applications for payment, either of expenses or annuities, shall be referred to this committee.

The treasurer and the secretary, when called upon for information in reference to the finances, shall furnish such information immediately. This committee shall furnish to the board of trustees information in reference to the finances when called upon to do so, and shall make regular reports in the months of December and June of each year. It shall be the duty of this committee to examine personally the bank accounts and all the assets at least once in six months.

5. The committee on bonds and investments shall cause to be examined and investigated thoroughly the title to any real estate upon which a loan secured by bond and mortgage is proposed, for investment of the permanent fund, and no such loan shall be made without a favorable recommendation from this committee and a majority vote of the board of trustees.

6. All applications for annuities shall be referred to the committee on annuitants. It shall be the duty of the committee to report to the board as soon as possible all the facts in each case, with their recommendation.

7. The committee on judiciary shall have charge of all legal matters pertaining to the board of trustees, and all such matters, unless otherwise ordered, shall be referred to them. They shall also examine any bonds, contracts, or other writings referred to them for that purpose by the president or secretary or any committee of the board of trustees, and shall report to such officers or committee their opinion as to the construction and validity of such writings.

8. The following shall be the order of business at all regular meetings: Calling roll; at annual meeting, election of officers; reading minutes; report of secretary; report of treasurer; presentation of bills; reading of communications and action thereon; applications for annuities; reports of standing committees; committee on finance; committee on bonds and investments; committee on annuitants; committee on judiciary; reports of special committees; unfinished business; miscellaneous and new business; adjournment.

#### RULES OF ORDER.

SECTION 1. Committees shall make report when called on to do so by a majority of the members present.

SEC. 2. Any matter referred to a committee may be taken out of the hands of said committee by a vote of a majority of the members present.

SEC. 3. Cushing's manual shall be the guide in parliamentary matters.

SEC. 4. These rules and by-laws may be temporarily suspended by a two-thirds ( $\frac{2}{3}$ ) vote of all the members present, and may be amended at any meeting by a majority vote of those present, providing a notice of such amendment shall have been given in accordance with Article X of the constitution.

In Philadelphia, Pa., the teachers have constituted an annuity aid association, which was incorporated in 1890. The treasurer of this association reported at the fifth annual meeting in December, 1895, as follows:

Our assets, with the receipts and expenditures for the year, are as follows:

#### *Permanent fund.*

|                                     |                |
|-------------------------------------|----------------|
| Mortgages at 5 per cent.....        | \$101, 700. 00 |
| Mortgages at 5.4 per cent.....      | 11, 600. 00    |
| Cash balance November 21, 1894..... | 221. 95        |
| Receipts to November 23, 1895:      |                |
| Dues of members.....                | \$1, 779. 60   |
| Donations.....                      | 49. 54         |
| Honorary members.....               | 45. 00         |
|                                     | <hr/>          |
|                                     | 1, 894. 14     |
|                                     | <hr/>          |
|                                     | 115, 416. 09   |

*Annuity fund.*

|  |               |                    |
|--|---------------|--------------------|
| Mortgages at 5 per cent .....                                |               | \$20, 200. 00      |
| Cash balance November 21, 1894 .....                         |               | 5, 210. 98         |
| Receipts to November 23, 1895:                               |               |                    |
| Dues of members .....  | \$13, 138. 50 |                    |
| Interest on mortgages, both funds .....                      | 6, 426. 32    |                    |
| Interest on deposits .....                                   | 258. 58       |                    |
| Initiation fees .....  | 240. 00       |                    |
| State appropriation .....                                    | 20, 000. 00   |                    |
|  |               | <u>40, 063. 40</u> |
| Less disbursements: <sup>1</sup>                             |               |                    |
| Annuities paid out .....                                     | \$17, 135. 13 |                    |
| Funeral benefits .....                                       | 600. 00       |                    |
| Expenses, etc .....  | 1, 005. 03    |                    |
|  |               | <u>18, 740. 16</u> |
| Gain in year .....   | 21, 323. 24   |                    |
| Cost of mortgages and insurance of title (included above) .. | 13, 250. 00   |                    |
|  |               | <u>8, 073. 24</u>  |
|  |               | <u>33, 484. 22</u> |

Since the annual statement, November 23, 1895, there has been received to date:

|  |                     |
|--|---------------------|
| For the permanent fund .....                       | \$1, 597. 10        |
| Less reduction on mortgages to be reinvested ..... | 500. 00             |
|  | <u>\$1, 097. 10</u> |
| For the annuity fund .....                         | 1, 872. 45          |

The association holds also in trust for the Alumnae Association of the girls' high and normal school, \$25,000.

From the interest on this trust fund there has been disbursed for the relief of teachers and ex-teachers since October 19, 1892, \$3,690.

The number of members December 30, 1895, is 888, with daily applications for membership.

The movement in favor of paying pensions and annuities to teachers has resulted in numerous inquiries at this Bureau, hence it is deemed advisable to publish as many of the constitutions of the annuity societies as can be obtained. This is the reason the following constitution, i. e., that of the Philadelphia society, is inserted:

## CONSTITUTION.

ARTICLE I.—*Title*.—The name of the society shall be The Teachers' Annuity and Aid Association of the City of Philadelphia.

ART. II.—*Objects*.—The objects of this association shall be to provide for and to furnish pecuniary aid, from time to time, to such of its members as shall be incapacitated from teaching in the public schools of the city of Philadelphia, by reason of sickness or advanced age, in such manner and upon such terms and conditions as the said association by its constitution and by-laws shall prescribe, and also to receive, hold, and expend donations of money for aid of other teachers not hereinbefore provided for, in such manner as the donors may provide.

ART. III.—SEC. 1. *Membership*.—Any teacher or superintendent of schools, in the employ of the board of public education of the first school district of Pennsylvania, comprising the city of Philadelphia, or of any of the boards of directors of the

<sup>1</sup> Total amount paid in annuitants in two years, 1894 and 1895, \$27,034.17. First quarter to March, 1894, 11 annuitants, \$517.51; last quarter to December 31, 1895, 60 annuitants, \$6,261.80.

several school sections of said district, may be admitted to membership in this association by a two-thirds vote of the whole board of trustees, by ballot, and on payment of an initiation fee of five dollars (\$5), and such dues as may be required by this constitution, and upon signing the constitution and by-laws, within thirty days after notification of election to membership. Questions arising as to what constitutes employment by any of said boards shall be determined by the board of trustees.

SEC. 2. *Dues commence.*—Any person eligible to membership at the date of organization applying for membership within two (2) years of said date shall pay dues from date of organization. In all other cases applicants shall pay dues from the time at which they become eligible.

SEC. 3. *Return of dues.*—Any member voluntarily withdrawing from the profession of teaching, after a membership of five or more years, shall be entitled to withdraw a sum of money equal to one-third ( $\frac{1}{3}$ ) of all the annual dues paid by said member into the treasury of the association.

SEC. 4. *Ineligibility from term of service.*—No person whose term of service as such teacher, at the time of applying for membership, exceeds fifteen (15) years, shall, after two (2) years from the date of organization, be entitled to membership.

SEC. 5. *Application for membership.*—Application for membership may be made at any time; but such application must be made in writing in such form as may be prescribed by the board of trustees, and must be accompanied by the fee for initiation and the first instalment of the annual dues, which fees and dues will be returned to the applicants in case of nonadmission to membership.

ART. IV.—SEC. 1. *Officers.*—The officers of this association shall consist of a president, a vice-president, a recording secretary, a financial secretary, and a treasurer, all of whom, with ten directors, shall constitute a board of trustees.

SEC. 2. *Term of directors.*—The directors shall be elected for a term of two (2) years, except as hereinafter provided. Immediately after the election, to be held on the first Saturday in December, 1891, they shall be divided by lot into two (2) classes. The members of the first class shall retire at the end of one year, and the members of the second class at the end of two years.

SEC. 3. *Election day, officers till first election; term of first officers.*—The officers and directors shall be elected annually on the first Saturday of December of each year: *Provided, however,* That the trustees elected November 1, 1890, for the remainder of the year 1890 and for the year 1891, shall hold office until their successors are elected and qualified: *And provided further,* That the next annual election of officers and directors shall be held on the first Saturday of December, 1891, and that the persons then chosen shall hold office until the Saturday succeeding the first day of January, 1892, or 1893, and until their successors are duly elected.

SEC. 4. *Elections by ballot, plurality vote.*—All elections of officers and directors shall be by ballot, and a plurality of the votes cast shall be necessary to a choice.

SEC. 5. *Vacancies.*—Any vacancies which may occur among the officers or directors shall be filled by the board of trustees: *Provided,* That persons so chosen shall hold office only for the unexpired term of the person he or she is chosen to fill.

SEC. 6. *Commencement of term of office.*—All officers and directors shall assume their duties on the Saturday succeeding the first day of January next after their election, except as provided in section 3, for the first officers after organization, and in section 5, relative to vacancies.

SEC. 7. *Delinquent trustees.*—The office of any member of the board of trustees who shall fail to attend three (3) consecutive regular meetings of the board without being excused by the said board, or who shall fail to perform the duties of the office, may be declared vacant by a two-thirds ( $\frac{2}{3}$ ) vote of the board.

SEC. 8. *Nomination of directors.*—For the purpose of nominating directors the board of trustees shall, at least four weeks before the annual election, divide the city into districts, equal in number to the directors to be chosen, by sectional boundaries,

these districts to consist of adjacent school sections, and containing as nearly as possible an equal number of members of the association.

The board of trustees shall, at least ten days before each annual election, call a meeting of all the members in each district for which a director is to be chosen, at each of which meetings the members present may nominate a person to be voted for, at the next annual election, for director of the district. In case no such nomination is made at such meeting, a nomination may be made at the time of the election.

SEC. 9. *Prepared ballots.*—In preparing the ballots for the annual election the following designations shall be used: For president and trustees; for vice-president and trustees; for recording secretary and trustees; for financial secretary and trustees; for treasurer and trustees; for directors and trustees.

SEC. 10. *Compensation of officers.*—No member of the board of trustees, except the financial secretary and the treasurer, shall receive any compensation for services. The compensation of the financial secretary and of the treasurer shall be determined by the board of trustees.

SEC. 11. *Bonds and security.*—The financial secretary and the treasurer shall, before entering upon their duties, furnish bonds with security furnished by a trust company of this city, for the faithful performance of said duties, in such amount as the board of trustees shall direct. Said bonds shall be placed in the hands of the president and the recording secretary, to be deposited in a safe deposit company. In case of a reelection, new bonds shall be furnished, with security as above.

ART. V. *Duties of officers.*—SEC. 1. *Duties of president.*—The president shall preside at all meetings of the association and of the board of trustees, and perform such other duties as may be imposed on him by the constitution and by-laws. He shall be ex officio a member of all standing committees.

SEC. 2. *Duties of vice-president.*—The vice-president shall preside in the absence of the president. In the absence of both president and vice-president from any meeting the members present shall choose a chairman, who shall preside at such meeting.

SEC. 3. *Duties of recording secretary.*—The recording secretary shall keep a record of all transactions of the association and of the board of trustees, send notice of meetings of the board of trustees to each member thereof, and attend to all the duties usually pertaining to the office or that may be directed by the board of trustees.

SEC. 4. *Duties of financial secretary.*—(a) The financial secretary shall receive all money from members and others, receipt therefor, and pay the same to the treasurer within eight (8) days of the receipt thereof. (b) He shall keep a record showing the monthly and other payments of each member of the association. (c) He shall make a monthly statement, as well as an annual report, to the board of trustees of all moneys received, and such other matters as may have been reported to him by the directors. (d) He shall report to the board of trustees at the first regular meeting in January of each year the names of all members who shall have forfeited their membership by nonpayment of dues.

SEC. 5. *Duties of treasurer.*—(a) *Receipts:* The treasurer shall receive all moneys of the association from the financial secretary, and when authorized by the finance committee, the proceeds of sales of stock, bonds, mortgages, legacies, and bequests, etc.

(b) *Deposits:* He shall deposit all moneys received by him in such institutions for savings, or trust companies, as shall be designated by the board of trustees, and all deposits shall be made in the name of the association.

(c) *Checks:* All checks or orders on banks, savings institutions, or trust companies shall be signed by the president and the treasurer.

(d) *Certificates, applications, and vouchers:* He shall send to each elected member a certificate of membership as soon as he is notified by the financial secretary that the said individual has complied with the requirements of this constitution. He shall keep on file such notices, and also all applications for membership.

(e) *Statements annually:* He shall prepare and furnish to the recording secretary a statement of the affairs of the annual meeting, which statement shall comprise an

account of the receipts and disbursements, and the balance in the treasury, a schedule of the property, the number of annuitants, a list of the officers and of benefactors and of deceased members, also the number of members in each school section.

(f) *Payments*: He shall pay all bills and appropriations ordered to be paid by the board of trustees. He shall also pay all annuities or benefits when and as the said board of trustees shall direct.

(g) *Reports*: He shall make a report at each regular meeting of the board of trustees of the condition of the finances of the association. He shall also present an annual report to the association at its meeting in December in each year.

SEC. 6. *Duties of directors*.—It shall be the duty of each director to look after the interests of the association in his or her district; to encourage teachers to become members, and to report all matters of interest, such as applications for membership, withdrawals, removals, transfers, and deaths to the financial secretary.

ART. VI. *Dues*.—SEC. 1. *Basis*.—The basis for estimating the annual dues for any member for any given year shall be the annual salary of said member, on the first day of January of the said year, including the increase for term of service accruing in the said year. The basis shall be in even hundreds of dollars, the lowest being five hundred dollars (\$500), and one hundred dollars (\$100) shall be added for every additional hundred dollars (\$100) or fraction of one hundred dollars (\$100) over said five hundred dollars (\$500).

SEC. 2. *One thousand dollars or less*.—The annual dues of any member receiving a salary of one thousand dollars (\$1,000), or less, according to the basis of section 1, of this article, shall be two per cent of the annual salary of said member on said basis.

SEC. 3. The annual dues of any member whose salary exceeds one thousand dollars (\$1,000), shall be two per cent on one thousand dollars, and one per cent on every additional one hundred dollars (\$100), according to the basis in said section 1, by which the said salary shall exceed one thousand dollars (\$1,000); but the annual dues of any member shall not exceed forty dollars (\$40).

SEC. 4. The annual dues of each member shall be paid to the financial secretary in ten (10) equal instalments—one for each month of the year except July and August, and not later than the twentieth (20th) day of each month. *Provided, however*, That members desiring to do so may pay their dues in advance for any length of time.

SEC. 5. The payment of the annual dues shall continue during life; and in case of annuitant members the said dues shall be one per cent per annum of the annuities of said members.

ART. VII. *Funds of the association*.—SEC. 1. *Two funds*.—The funds of the association shall be known and kept as the permanent fund and the annuity fund, in separate bank accounts.

SEC. 2. *Permanent fund*.—(a) The money received from donations, legacies, entertainments and other sources, and the total amount received from the initiation fees and annual dues, less the current expenses, during the first three (3) years from the end of the year of organization (1890), shall, together with fifty per cent of the initiation fees and annual dues received thereafter, constitute the permanent fund, except as is hereinafter provided.

(b) *Additions to permanent fund*.—All contributions from members, in whatever shape, and all donations, legacies, and bequests, unless ordered otherwise by the donors or testators, shall be added to the permanent fund of the association, and no disbursement of any kind whatsoever shall be made from the principal of the said permanent fund.

(c) *Limits to additions*.—When the permanent fund shall have reached the sum of fifty thousand dollars (\$50,000), only twenty per cent of the initiation fees and annual dues shall be added to it thereafter.

(d) When the permanent fund shall have reached the sum of one hundred thousand dollars (\$100,000), no portion of the initiation fees or annual dues shall thereafter

be added to it; but the entire income of the permanent fund, and the whole of the initiation fees and annual dues shall be placed to the credit of the annuity fund.

SEC. 1. *Annuity fund.*—(a) *After three years.*—After the expiration of three years from the end of the year of the organization of the association (1890), fifty per cent of the initiation fees and annual dues, the receipts from any entertainment given for the purpose, and the entire income from the permanent fund shall be set aside and form a fund for the payment of annuities, subject to the provisions of the following clauses of this section.

(b) *Increase.*—When the permanent fund shall have reached the sum of fifty thousand dollars (\$50,000), eighty per cent of the said initiation fees and annual dues, together with the entire income from the permanent fund, shall be placed to the credit of the annuity fund.

(c) When the permanent fund shall have reached the sum of one hundred thousand dollars (\$100,000), the entire income from the permanent fund, together with the whole amount of the initiation fees and annual dues, shall be placed to the credit of the annuity fund.

(d) No portion of the annuity fund, or the income thereof, shall in any way be added to the permanent fund; but the whole annuity fund shall be used only for the current expenses of the association, funeral benefits for deceased members, and for the benefit of the annuitants in the manner prescribed by this constitution and the by-laws.

(e) *Expenses.*—After the first three years all the expenses of the association shall be paid out of the annuity fund.

SEC. 4. *Disposition of funds.*—The permanent fund of this association shall be invested in bonds of the United States of America, or of the State of Pennsylvania, or of the city of Philadelphia, or in bonds secured by first mortgages on improved real estate in the city of Philadelphia, with title insurance of some reliable trust company for such purpose; but no loan upon real estate shall be made for more than sixty per cent (60 per cent) of its value.

ART. VIII. *Annuitants.*—SEC. 1. *Disability.*—All members who shall become either physically or mentally incapacitated for school work may be declared by the board of trustees to be annuitants, and upon such action shall receive an annuity, as provided in Article IX of this constitution.

All women who shall have completed a term of school service of thirty-five (35) years, and been members of the association for three (3) years, and all men who shall have completed a term of such service of forty (40) years, and been members of this association for three (3) years, shall, if they desire, be declared to be annuitants, and upon such action by the board of trustees, shall receive an annuity, as provided in Article IX of this constitution.

The term of school service above mentioned shall, as soon as the annuity fund will justify, be reduced to thirty (30) years and thirty five (35) years, respectively.

The said term of school service of those who join this association within the first two (2) years from the date of organization, may have been commenced in this city or elsewhere; but of those who shall join after the said two (2) years, the terms of such service shall have been commenced in the public schools of Philadelphia.

SEC. 2. *Application.*—Any member desiring to be placed on the list of annuitants on account of having completed the required term of school service shall make application in writing to that effect to the board of trustees, who, if satisfied that all requirements have been fully complied with, shall declare such applicants to be annuitants.

SEC. 3. Any member desiring to be an annuitant on account of disability shall make application as above; and if such disability be established to the satisfaction of the board of trustees they shall declare such member to be annuitant. But in case the said member shall become thereafter restored to health, and capable of attending to business, the annuity may, by a two-thirds ( $\frac{2}{3}$ ) vote of the whole board of trustees, be withdrawn from such member.

SEC. 4. *Positions debar retirement.*—No member shall be placed upon the retired list while holding a position in any school, public or private. (Amended.)

SEC. 5. *Funeral benefits.*—When any member of the association dies the board of trustees shall pay one hundred dollars (\$100) towards defraying the expenses of the funeral.

SEC. 6. No member shall be entitled to any pecuniary benefit until after the expiration of three years from the date of election to membership.

SEC. 7. Persons not engaged in teaching may, upon contributing ten dollars (\$10) or upwards, be elected honorary members of the association.

ART. IX. *Annuities.*—The annuities shall be sixty per cent of the basis of assessment according to article VI, section 1, of this constitution, at the time of retirement, but no annuity shall exceed the sum of six hundred dollars (\$600). Whenever the annuity fund shall be insufficient to pay in full all annuitants, the whole of said fund, less the current expenses, shall be divided equitably among the annuitants.

ART. X. *Cessation of membership.*—SEC. 1. The name of any member who, in the judgment of the board of trustees, shall have voluntarily left the profession, or that of any member who shall, in the judgment of the board of trustees, be guilty of misrepresentation in his or her transactions with this association, may be dropped from the roll of the association by a two-thirds ( $\frac{2}{3}$ ) vote of the whole board of trustees, and the membership of such person shall thereupon terminate.

SEC. 2. *Arrears.*—Any member who shall be in arrears for dues three (3) months shall be liable, after due notice, according to the by-laws for that purpose, and hearing, if desired, to have his or her membership declared forfeited by a majority of the whole board of trustees.

SEC. 3. Members who lose their position as teachers for any other cause than voluntary resignation may be continued in membership and receive such aid as the board of trustees may prescribe.

SEC. 4. Members who lose their said position for causes other than those already mentioned may be continued in membership under such rules and regulations as the board of trustees may prescribe.

ART. XI. *Amendments.*—This constitution and the by-laws may be amended by a three-fourths ( $\frac{3}{4}$ ) vote of all the members voting. Notice of the proposed amendment shall be sent to every member not less than ten days previous to the taking of a vote thereon. It shall be the duty of the board of trustees, whenever any amendment shall be proposed, to provide for obtaining a vote thereon in such manner as said board may deem proper: *Provided*, That every member of the association shall be allowed to vote for or against the adoption of the proposed amendment. The board of trustees shall also provide for the collection and canvassing of the vote as cast, and shall notify members of the result of the voting.

ART. XII. *Meetings.*—The annual meeting of this association shall be held on the first Saturday in December of each year, and other meetings of the association shall be held on the first Saturday in April and the first Saturday in October, at such hour and in such place as the board of trustees shall direct.

The president shall call a special meeting whenever requested to do so by fifteen (15) members.

At all meetings of the association twenty-five (25) members shall constitute a quorum.

#### AMENDMENTS.

ART. VIII, SEC. 4. Change period (.) to semicolon (;) and add "but a member may, in case of temporary retirement from duty and leave of absence from the proper authority on account of sickness, on furnishing a capable substitute and assigning all excess of salary over pay of said substitute to this association, be placed temporarily on said list of annuitants."

Adopted February 20, 1891.

Louisville, Ky., has an incorporated body known as the Louisville Educational Association. There has never been any attempt on the part of this association to pay pensions or annuities to teachers. It has, however, paid out quite a large sum of money in cases of sickness and death among the teachers. If a teacher in the Louisville public schools is taken sick and requires any aid, the association renders all necessary service in the way of paying for nurses, physicians, and, in the case of death, defraying funeral expenses. This is all that has been attempted to aid the teachers in Louisville, Ky.

In Ohio the teachers are alive to the desirability of creating a pension fund by authority of the State. They are at present petitioning the State legislature to pass a law similar to those in force in Illinois and Michigan. Their petition outlines the provisions requiring time of service and sources of pension fund, namely, twenty to thirty years of service and 1 per cent tax on teachers' salaries. Like the teachers of other cities, those of Cincinnati maintain a society, with voluntary membership, which dates from 1891. This society pays an annuity to superannuated or retired teachers as well as aiding teachers in cases of sickness and death. In Cleveland a similar society pays sick benefits but not annuities.

In Washington, D. C., and in Baltimore, Md., the teachers maintain voluntary societies. They have succeeded in raising funds by holding bazaars, the proceeds of which gave them a capital to start with.

Milwaukee, Wis., Denver, Colo., Indianapolis, Ind., Pittsburg, Pa., Omaha, Nebr., Kansas City, Mo., and St. Paul, Minn., all report that neither State nor city authorities pay annuities; nor that the teachers have formed annuity societies.

In New York a law concerning pensions to teachers in rural common schools is found in an addition to the general school law, which is entitled:

AN ACT to provide conditional compensation for teachers of common schools in any town of the State who have taught therein continuously twenty-five years or more.

*The people of the State of New York, represented in senate and assembly, do enact as follows:*

SECTION 1. Upon the petition of twenty-five or more taxpayers of any town in the county of the State requesting the submission, at the next ensuing annual town meeting of such town, made not less than ten days before the accruing thereof, of the question of making provision by taxation upon the taxable property in such town for a sum of money sufficient to pay such teachers resident of such town, who have been employed in the common schools thereof for not less than twenty-five years, and have rendered continuous service in teaching for such period, with such intermission only as may have occurred in the allotment of school terms or from sickness, the town board of such town shall cause to be submitted to the taxpayers of such town, at the next ensuing town meeting, upon due notice thereof published in a newspaper printed in such town (if any paper be published therein), or printed or written notices posted in not less than ten public places in such town, the question whether a sufficient sum of money be raised from the taxable property within

such town to pay said teachers, as compensation for long and meritorious service, so long as said teachers reside in such town, upon the conditions, at the times, and in the manner hereafter provided.

SEC. 2. In the event of such petition being so made and presented to the supervisor of any town, and notice being given as provided in section one of this act, the town board shall furnish the necessary ballots in number and forms for the use of the voters of such town at the next ensuing annual town meeting, and shall provide separate ballot boxes for the reception of ballots cast thereat on the question submitted. One-half of the number of said ballots shall have printed thereon, respectively, "for teachers' pension fund," and the other half shall have printed thereon, respectively, "against teachers' pension fund," and such votes as may be cast shall be counted and returned by the officers presiding at said town meeting the same as other votes are counted and returned. If a majority of the votes so cast be found to be in favor of raising a sum of money sufficient to provide for such fund, and not otherwise, the town board of such town shall immediately thereafter proceed to ascertain what teachers of such class are entitled to the benefits conferred by this act and to receive their proportionate share of the money so voted to be paid; and said board shall require of every person applying therefor, who has taught in the common schools of such town for the period of twenty-five years or more, to make concise statement of the term of service, the districts in which he or she has taught, and the wages, monthly or weekly, received during the last year in which said teacher taught; which statement shall be acknowledged before any officer qualified to take acknowledgments, and filed in the office of the clerk of such town. Thereupon, and at the next annual meeting of the board of supervisors of the county, and at every annual meeting thereafter, the said board shall include in the tax levy of the town so voting as hereinbefore provided in favor of a teachers' pension fund, the amount necessary in each year, as estimated and reported by the town board of such town; which sum, when collected, shall be paid over by the collector of such town to the supervisor thereof, who shall pay out the said money to the teachers found to be entitled thereto in amount to each such teacher, in monthly payments, equal to one-half the sum received as teachers' monthly or weekly wages by each such teacher during the last year such teacher was employed to teach in the common schools of such town. And such teachers sharing in the money so appropriated and paid shall be allowed such amount in installments herein provided as long as they continue to reside in such town, but no longer; and they shall, in receiving the benefits conferred by this act be deemed to be retired from teaching and placed upon a roll kept by the town clerk of the town as superannuated and retired teachers; subject, however, if not physically disabled, to perform such service in the place of any teacher temporarily absent or disqualified as the school commissioner may require and direct, without additional compensation.

SEC. 3. When a vote has been had on the proposition provided to be so submitted by this act in any town, and such vote shall have been against the teachers' pension fund, another vote on the same question shall not be taken again within three years of the first vote so taken.

SEC. 4. This act shall take effect immediately.

For the city of New York a special law exists which empowers the educational authorities of that city to retire men at the age of 60; women at the age of 55 years, or after 30 years' service. This State law also empowers the board of education of that city to retain 1 per cent of the teachers' salaries. The law authorized the board of education of that city to retire, upon annuities, female teachers who have served in the city schools for 30 years or more, and male teachers who have served 35 years or more; but no teacher can be so retired

unless the city superintendent of schools shall first recommend the retirement, stating that "the teacher is mentally or physically incapacitated for the performance of duty."

The "retirement fund" consists chiefly of the following, with the interest and income thereof: "All money, pay, compensation or salary, or any part thereof, forfeited, deducted, or withheld from any teacher or teachers for or on account of absence from duty for any cause." The law is here quoted in full.

*The people of the State of New York, represented in senate and assembly, do enact as follows:*

SECTION 1. Section ten hundred and twenty-eight of chapter four hundred and ten of the laws of eighteen hundred and eighty-two, entitled "An act to consolidate into one act and to declare the special and local laws affecting public interests in the city of New York," is hereby amended by adding thereto the following subdivision, to be known as subdivision seven of said section:

7. The board of education of the city of New York is hereby given the general care and management of the public school teachers' retirement fund created by this act.

The comptroller of the city of New York shall hold all money belonging to said fund, and by the direction of the said board of education shall invest and pay out the same.

The board of education shall have charge of and administer said public school teachers' retirement fund as it shall deem most beneficial to said fund, and is empowered to make all necessary contracts, and take all necessary and proper action and proceedings in the premises, and to make payments from said fund of annuities granted in pursuance of this act; and shall from time to time establish such rules and regulations for the administration of said fund as it may deem best. And the comptroller of the city of New York shall report in detail to the board of aldermen of the city of New York annually, in the month of January, the condition of said fund, and the items of the receipts and disbursements on account of the same.

The public school teachers' retirement fund herein provided for shall consist of the following, with the interest and income thereof:

(1) All money, pay, compensation or salary, or any part thereof, forfeited, deducted, or withheld from any teacher or teachers for and on account of absence from duty for any cause. The clerk of the board of education shall certify monthly to the comptroller the amounts so deducted from the salaries of teachers during the preceding month.

(2) All moneys received from donations, legacies, gifts, bequests, or otherwise, for and on account of said fund.

(3) All such other methods of increment as may be duly and legally devised for the increase of said fund.

On and after the passage of this act the board of education shall, by amending its by-laws relating to the excuse of absence of teachers with pay, so provide that the aggregate of the several sums deducted or forfeited on account of absence from duty shall be fully adequate to meet the demand made upon the public school teachers' retirement fund, for the payment of annuities as herein provided.

Said board of education shall have power, by a two-thirds vote of all its members, and after a recommendation to that effect shall have been made by the city superintendent of schools, stating that the teacher is mentally or physically incapacitated for the performance of duty, to retire any female teacher of the grammar and primary schools, including special teachers in the same, who shall have taught therein during a period aggregating thirty years, and to retire any male teacher of said school who shall have taught therein during a period aggregating thirty-five years.

Any teacher so retired shall thereafter be entitled to receive as an annuity one-half the annual salary paid to said teacher at the date of said retirement, not to exceed, however, in any case the sum of \$1,000 per annum.

The board of education is hereby given the power to use both the principal and the income of said fund, and to manage, accumulate, and otherwise control the same as said board shall provide by its by-laws, and to pay the annuities hereinbefore mentioned, and shall have power from time to time to reduce the amount of annuities of all beneficiaries of said fund, provided only that such reduction shall be at the same rate per centum.

SEC. 2. All acts and parts of acts inconsistent with this act are hereby repealed.

SEC. 3. This act shall take effect immediately.

The superintendent of schools in the city of Buffalo, Mr. Henry P. Emerson, reports that there is a bill before the legislature of his State creating a retirement fund for public school teachers of Buffalo. This bill is here inserted because it shows decided differences from the special law passed for the city of New York. It contains no provision for retiring a teacher for breakdown before the expiration of the limit of twenty-five years. The women teachers of Buffalo have formed a mutual benefit association which pays to members who become totally disabled, or to their heirs in case of death, a sum raised by an assessment on each member of \$1. The number of members is about 250. The following is the bill referred to, which has found the indorsement of the teachers of the city of Buffalo by a vote of 785 to 161:

SECTION A. The mayor of the city of Buffalo, the superintendent of education, the chairman of the board of school examiners, the president of the Principals' Association, and the president of the Women Teachers' Association shall constitute a board of trustees, who shall have general care and management of the public school teachers' retirement fund created by this act.

SEC. B. The said board of trustees is empowered to make payment from said fund of annuities granted in pursuance of this act, and to take all necessary and proper action in the premises, and from time to time establish such rules and regulations for the administration and investment of said fund as it may deem best.

SEC. C. The public school teachers' retirement fund, created by this act, shall consist of the following moneys, to wit:

1. An amount not to exceed one per cent per annum of the respective salaries paid to the superintendent of education, supervisors of grades, special teachers, principals, and assistant teachers, to be taken from said salaries in four equal installments.

2. All moneys received from donations, legacies, gifts, bequests, or otherwise for and on account of said fund.

3. All moneys which may be derived by such other methods as may be duly and legally devised for the increase of said fund.

SEC. D. All persons employed in the department of education and hereinafter mentioned as contributors to said fund shall become annuitants under this act in manner following, to wit:

Any female teacher who shall have taught in public schools for 25 years, and any male teacher who shall have taught in public schools for 30 years may be retired by the superintendent and become an annuitant of this fund during life: *Provided, however*, That four-fifths of such service shall have been rendered in the public schools of the city of Buffalo.

And any female teacher who shall have taught in public schools 35 years, and any

male teacher who shall have taught in public schools for 40 years, shall have the right to retire and become an annuitant of said fund during life: *Provided, however,* That four-fifths of such service shall have been rendered in the public schools of said city.

SEC. E. Any teacher so retired or retiring shall receive as an annuity an amount not to exceed one-half of the annual salary paid to said teacher at the time of such retirement, said annuity to be paid quarterly: *Provided, however,* That such annuity shall not exceed the sum of six hundred dollars (\$600) which shall be paid by the said board of trustees out of the fund created in accordance with this act, in the manner provided by law for the payment of salaries.

SEC. F. No teacher shall become an annuitant under this act until he or she shall have paid into the retirement fund an amount equal to 20 per cent of his or her annual salary at the time of retirement.

SEC. G. Said board of trustees is hereby given the power to use both the principal and the income of said fund for the payment of annuities hereinbefore mentioned, and shall have power to reduce, from time to time, the amount of all annuities: *Provided,* That such reduction shall be at the same rate in all cases.

SEC. H. If at any time a teacher who shall be willing to continue to teach shall not be reemployed or shall be discharged before the time when he or she would, under the provisions of this act, be entitled to an annuity, then such teacher shall be paid back all the money which may have been deducted from his or her salary under the provisions of this act.

SEC. I. The superintendent of education shall, quarterly, in making the pay rolls for the school department or the persons entitled to share in the fund hereby created, deduct a sum not to exceed 1 per cent of the amount of salary of such persons, and shall certify the amount of such deductions and the names of the persons from whose salaries such deductions shall have been made; and such certificate shall accompany the pay roll, and a warrant for the amount of the deductions so certified shall be drawn payable to the order of the city treasurer, who shall retain the same subject to the disposal of the said board of trustees hereinbefore mentioned.

SEC. J. The treasurer of the said city shall be custodian of said fund and he shall execute a bond to the city with good and sufficient securities to be approved by said board of trustees conditioned for the faithful performance of the duties of his office. Such bond shall be filed in the office of the clerk of the city, and in case of a breach of the same or the conditions thereof, suit may be brought on the same in the name of the city for the use of said board or of any person or persons injured by such breach. The said treasurer shall report to the said board of trustees the amount and condition of said fund on June 30 of each year.

This act shall take effect September 1, 1896.

The retention of 1 per cent of the salaries per month seems to be generally accepted as the proper premium. Portions of the constitution of the Teachers' Mutual Benefit Association of the city of New York are here inserted owing to their peculiar fitness for the purposes for which they are intended.

#### CONSTITUTION.

ART. V.—*Membership*.—SEC. 1. Any teacher or superintendent of schools, in the permanent employ of the board of education of the city of New York, or of the board of trustees of the college of the city of New York, or of the board of trustees of the normal college of the city of New York, may be admitted to membership in this association by a two-third vote of the whole board of trustees, by ballot, and on payment of an initiation fee of three dollars, and such dues as may be required by this constitution. Questions arising as to what constitutes permanent employ shall be determined by the board of trustees.

SEC. 2. Any person eligible to membership, applying for admission within three years of the time at which such person became eligible, shall pay dues only from date of admission. In all other cases applicants shall pay dues from the date at which they became eligible.

Back dues may be paid as follows:

The ward director shall compute the amount due by said candidate from date of eligibility, and charge such sum as a debt against such candidate; said debt to be paid as follows:

Twenty per cent of the entire amount of said indebtedness, without interest, must be paid annually in ten equal monthly installments in addition to the regular dues; said amount to be collected by the department collector, and transmitted to the director with the regular monthly dues and statement.

Should any member admitted upon the before-mentioned terms become an annuitant before said debt shall have been paid in full, the balance due shall be deducted from his or her first quarter's annuity.

SEC. 3. Members who, at the time of the adoption of these amendments shall have paid dues from date of organization, shall be entitled to count their membership from such date.

SEC. 4. Any member voluntarily withdrawing from the profession, after a membership of two or more years, shall be entitled to withdraw a sum of money equal to one-third of all the annual dues paid by said member into the treasury of the association.

SEC. 5. Application for membership may be made at any time; but such application must be made in writing, and must be accompanied by the initiation fee and the first instalment of the annual dues. No application will be entertained except on the conditions herein set forth.

SEC. 6. No person whose term of service shall at the time of application exceed fifteen years, shall, after the expiration of three years from date of organization, be eligible to membership.

SEC. 7. The board of trustees shall have power, under such rules and regulations as said board shall adopt, to admit persons to honorary membership.

ART. VI.—*Dues*.—SEC. 1. The basis for estimating the annual dues for any member for any given year shall be the annual salary of said member on the thirty-first day of December of the preceding year. In case of special teachers the dues shall be estimated on the salary received for service in the public schools during the year preceding the first of January of each year.

SEC. 2. The annual dues of any member receiving a salary of \$1,000 or less per annum shall be one per cent of the annual salary of said member.

SEC. 3. The annual dues of all members whose salary exceeds \$1,000 shall be \$10, and fifty cents additional for every \$100 or fraction of \$100 by which the said salary shall exceed \$1,000, but the annual dues of no member shall exceed \$20.

SEC. 4. The annual dues shall be paid in ten equal instalments, one for each month of the year except July and August. These monthly instalments shall be paid not later than the 20th of each of the said months.

ART. VII.—*Funds of the association*.—SEC. 1. The funds of the association shall be known as the permanent fund and the annuity fund.

SEC. 2. *Permanent fund*.—(a) The money received from donations, legacies, etc., and the total amount received from the initiation fees and annual dues, less the current expenses during the first two years from the date of organization, shall, together with 50 per cent of the amount of the initiation fees and annual dues received thereafter, constitute the permanent fund except as is hereinafter provided.

(b) All donations and bequests, unless ordered differently by the donors or testators or by the board of trustees, shall be added to the permanent fund of the association, and no disbursements of any kind whatsoever shall be made from the principal of the said permanent fund.

(c) When the permanent fund shall have reached the sum of \$50,000 only twenty

per cent of the annual dues and initiation fees shall be added to it thereafter. When the permanent fund shall have reached the sum of \$100,000 ten per cent of the annual dues and admission fees shall be added to the same until the said fund shall have reached the sum of \$200,000. When the permanent fund shall have reached the sum of \$200,000 no portion of the initiation fees or annual dues shall be added to it thereafter, but the entire income from the permanent fund and the annual dues and the initiation fees shall be placed to the credit of the annuity fund.

SEC. 3. *Annuity fund.*—(a) After the expiration of two years from date of organization fifty per cent of the annual dues and initiation fees and the entire income from the permanent fund shall be set aside for the payment of annuities subject to the provisions of the following clauses of this section:

(b) When the permanent fund shall have reached the sum of \$50,000, eighty per cent of the said annual dues and initiation fees, together with the entire income from the permanent fund, shall be placed to the credit of the annuity fund.

(c) When the permanent fund shall have reached the sum of \$200,000, the entire income from the permanent fund, together with the annual dues and initiation fees, shall be placed to the credit of the annuity fund.

(d) No portion of this fund, or the income thereof, shall in any way be added to the permanent fund; but the whole fund shall be used only for the current expenses of the association and for the benefit of the annuitants in the manner prescribed by this constitution and by-laws.

(e) All expenses of this association shall be paid out of this fund.

SEC. 4. *Disposition of funds.*—The permanent fund of this association shall be invested in bonds of the United States, or of the State or city of New York, or in bonds and mortgages on productive real estate in the city of New York and Brooklyn; but no loan upon real estate shall be made for more than 60 per cent of its value.

SEC. 5. *Annual subscribers.*—Any person agreeing to subscribe five dollars, or multiples of five dollars, up to one hundred dollars, shall be known as an annual subscriber of the Teachers' Mutual Benefit Association, and as such shall have his or her name printed on all reports published by the association.

ART. VIII. *Retired members.*—SEC. 1. All members who shall become either physically or mentally incapacitated for school work, all female members after a term of service of thirty-five years, and all male members after a term of service of forty years, may be retired; and upon such retirement shall receive an annuity, as provided in Article IX. The said terms of service of those who join this association within the first three years from the date of organization, shall have been commenced in this city or elsewhere; but of those who shall join after the said three years, the terms of service shall have been commenced in the public schools of this city.

SEC. 2. Members desiring to be placed on the retired list on account of having completed the required term of service, shall make application in writing to that effect to the board of trustees, which board shall thereupon retire all such applicants.

SEC. 3. Any member desiring to be retired on account of disability, shall make application as above; and if such disability be established to the satisfaction of the board of trustees, they shall retire such member. Whenever, in the opinion of the board of trustees, such member shall become thereafter restored to health and capable of attending to business, the annuity may, by a two-third vote of the whole board of trustees, be withdrawn from the same.

SEC. 4. No member shall be entitled to any pecuniary benefit until after the expiration of two years from date of membership.

Any person joining this association after January 1, 1894, shall not receive any pecuniary benefit until after five years of membership.

*Patrons.*—Any person donating at one time two hundred dollars or more, shall be designated as a patron of the Teachers' Mutual Benefit Association, and as such shall have his or her name printed on all reports published by the association.

ART. IX. *Annuities*.—The annuities shall be 60 per cent of the yearly salary at the time of retirement; but no annuity shall exceed the sum of \$600. Whenever the annuity fund shall be insufficient to pay in full all annuitants, the whole of said fund, less the expenses, shall be divided equitably among the annuitants.

ART. X. *Discipline*.—SEC. 1. The name of any member who, in the judgment of the board of trustees, shall have voluntarily left the profession, or that of any member who shall, in the judgment of the board of trustees, be guilty of conduct unbecoming a member of the profession, may be dropped from the roll of the association by a majority vote of the whole board of trustees, and the membership of such person shall thereupon terminate.

SEC. 2. Members who lose their positions for causes other than those already mentioned may be continued in membership, under such rules and regulations as the board of trustees may prescribe.

SEC. 3. Any member who shall be in arrears for dues shall be liable to have his or her membership declared forfeited by a majority vote of the whole board of trustees.

SEC. 4. Members who lose their positions for any other cause than voluntary resignation, may be continued in membership, and receive such aid as the board of trustees may prescribe.

In Brooklyn, N. Y., the teachers have formed a society (entirely voluntary), but its funds are not yet adequate to pay annuities.

In St. Louis, Mo., the first steps toward the establishment of an annuity fund have been taken; the State legislature has authorized the board of public schools to establish such a fund; the money is to be supplied by a voluntary tax of about 1 per cent on salaries paid.<sup>1</sup>

In California a State law exists for the purpose of creating and administering a "Public school teachers' annuity and retirement fund in the several counties and cities of the State." Up to January 1, 1896, six teachers have retired under this law. This being a general law for the entire State, it seems desirable to publish it in full.

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. The superintendent of public schools, the county treasurer, and the chairman of the board of supervisors of each county, or city and county, and their successors in office, are hereby constituted a board of trustees of the "School teachers' annuity and retirement fund," to provide for the disbursement of the same, and to designate the beneficiaries thereof, as hereinafter directed, which board shall be known as the "School teachers' retirement fund commissioners."

SEC. 2. They shall organize as such board by choosing one of their number as chairman and one as secretary. The county treasurer shall be ex officio treasurer of such fund. Such board of trustees shall have charge of and administer said fund and order payments therefrom according to the provisions of this act. They shall

---

<sup>1</sup>The Missouri State legislature, in March, 1895, passed an act authorizing the teachers and the school board of St. Louis to organize for the purpose of providing incapacitated teachers with pensions or annuities. By this act female teachers who have served twenty-five years and male teachers who have served thirty years are entitled to annuities, which are derived from (a) a deduction of not exceeding 1 per cent of the teachers' salaries, (b) donations, bequests, etc., (c) money derived from other legal methods of increment. The teachers of St. Louis are about to organize under said act. The relief fund is to be controlled by a board of trustees, to consist of the superintendent of public schools, four members of the school board chosen by that body, and two representatives chosen by the teachers who may signify their desire to become members of the organization.

report annually in the month of July to the board of supervisors the condition of such fund, and the receipts and the disbursements on account of the same, with a full and complete list of the beneficiaries of said fund, and the amounts paid to each of them.

SEC. 3. Whenever any teacher entitled to the benefits of this act has taught in the public schools of this State for a period of twenty years, and shall become incapacitated from performing the duties of a teacher, such teacher shall, at his or her request, and may, in the discretion of the board of school trustees, without such request, be retired as a teacher, and shall thereafter receive an annuity out of said fund of forty-five dollars per month; and if such teacher has taught for twenty-five years or over, shall, under the same circumstances, be retired upon an annuity of fifty dollars per month, such payments to be made out of the fund in the different counties in proportion to the length of time taught by such teacher in each county; but in case any teacher should be retired within three years after the passage of this act, he or she must, in order to receive the benefits thereof, pay into the fund provided for in this act the sum of three hundred dollars; *And provided further*, That if at any time there shall not be sufficient money in said fund to pay the warrants drawn thereon as presented for payment, the treasurer shall register said warrants, and mark on the back of each these words: "Presented for payment this — (giving day, month, and year) and not paid for want of funds."

Treasurer of ——— County.

And such warrants shall be paid in the order of registration and bear interest at five per cent per annum from date of registration.

SEC. 4. The board herein provided for shall hold quarterly meetings on the third Saturday of January, April, July, and October of each year at the office of the county superintendent of public schools. Such board shall biennially, at the meeting in January, select from its members a president and secretary. It shall issue warrants, signed by its president and secretary, to the persons entitled thereto for the amount of money ordered paid to such persons from such fund by said board, stating therein for what purpose such payments are made. It shall keep a record of all its proceedings, which shall be public. It shall at each quarterly meeting send to the treasurer of the county, or city and county, and to the auditor of such county, or city and county, a list of all persons, if any, entitled to payment out of the fund provided in this act, stating the amount of such payments and for what granted, which lists shall be sworn to as correct by the president and secretary of said board, and the auditor shall then enter a copy of said list in a book to be kept by him for that purpose, known as the "School teachers' annuity fund book." When such list has been entered in such book by the auditor, he shall transmit the same to the board of supervisors of such county, or city and county, which board shall order the payment of the amount named out of the fund provided for by this act. A majority of the members of said board shall constitute a quorum for the transaction of business.

SEC. 5. In addition to the powers hereinbefore granted to said board, it shall have the further power, first, to subpoena and compel witnesses to attend and testify before it in all matters relating to the operation of this act, and any member of said board may administer an oath or affirmation to such witness in the form prescribed in courts of justice; second, to provide for the payment out of said fund of all expenses, such as for printing, for stationery, and for postage stamps, but the members of said board, as such, shall serve without compensation; third, to make all such rules and regulations for the transaction of their business, from time to time, as may be necessary.

SEC. 6. To provide a fund for the payments provided for in this act, the secretary of the board of education of each municipality shall certify monthly to the treasurer of such municipality and the board of trustees in every school district outside of such municipalities shall certify and pay over in like manner to the county treasurer of each county, one per cent of the amount due each teacher as salary for the

previous month; and all moneys derived from any other source shall be paid to the county treasurer to the credit of such fund. Such board shall also receive and place to the credit of said fund all moneys received from donations, legacies, gifts, bequests, or otherwise.

SEC. 7. This act shall be binding only upon public school teachers who, after the passage of this act, shall sign and deliver to the board of education of the municipality in which they are employed a notice in substantially the following form:

\_\_\_\_\_, \_\_\_\_\_, 1895.

*To the board of education (or trustee, as the case may be) of \_\_\_\_\_:*

You are hereby notified that I agree to be bound by, and desire to avail myself of the provisions of the act of the legislature of California, approved \_\_\_\_\_, eighteen hundred and ninety-five, entitled "An act to create and administer a school-teachers' annuity and retirement fund" in the several counties and cities and counties in this State.

\_\_\_\_\_, \_\_\_\_\_,  
*Public School Teacher.*

And no teacher employed in the public schools of this State at the time of the passage of this act failing to give such notice shall be entitled to any benefits under this act (or) subject to any of its burdens. (And no teacher employed after the passage of this act who, within ninety days after such employment, fails to give such notice, shall share the benefits of or be subject to the burdens of this act.)

Such notices shall be delivered to the treasurer of such municipality, and a copy thereof to the commissioners of said fund, and preserved as a record for their information.

*Pensions paid to teachers in Europe.*—A review of the pension laws in force in European countries will show that in Europe the conviction is prevalent that it is a wise policy to pension teachers. It aids in establishing the profession of teaching, and thus aids materially in securing good results in public education, which otherwise might not be secured. All European countries follow this policy except Spain and Great Britain; but in Great Britain the teachers themselves have recently established a union which in form of a mutual aid society pays annuities to disabled teachers. A similar enterprise is on foot among the teachers of other states where pensions are granted by the government, so that Spain is the only country where the teachers have no hope for relief in old age or in case of breakdown.

The German states may be mentioned first. All the 26 states that form the German Empire pay pensions both to teachers and their widows and orphans. Their pension funds are nearly one hundred years old. The conditions of the various funds are not the same throughout the country. In Prussia, for example, the fund is formed by the state and the community, and the teachers pay a nominal annual premium. Early breakdown, say after ten years, is usually met by an annuity equal to one-fourth, and the maximum pension is fixed at three-fourths of the salary. In every case a teacher is obliged to pay as an entrance fee the first month's salary of his definite employment; after that the fee is very trifling, and the state bears not less than one-half of all the expenditures for pensions. But in Germany there exists a provision stranger than can be found in the whole of the examination of this question. The community may recover part of its contribution to the pension of its teacher from the salary of his successor. A system of

compulsory retirement produces a steady flow of promotion, but it seems hard for a teacher to be fined for his own promotion. The teachers' unions, which are quite numerous and which form a national union numbering some 65,000 members, make a series of contributions toward a fund for life insurance, and this is paid out in the form of an annuity to the family of the contributor. It is a characteristic of the parental government of the states in Germany that defaulters of pensions and defrauders of pension funds are not known in the history of the fund since its beginning.

In Austria the pension schemes vary in different parts (crown lands) of the Empire. One example will suffice: The teachers pay annually 2 per cent of their salary, and the first tenth of the first year's salary, as well as the first tenth of every increase; the remainder of the fund is supplied by the state and the communities. The pensions vary from a fixed amount equal to one and one-half times the salary paid once for all when incapacitated after less than ten years' service to an annuity of the full salary after forty years' service. Annual payments are also made to the widow and children of any teacher, no matter what length of service; the amount thus paid varying from one-fourth to a little more than one-half of the salary enjoyed by the teacher at his death. The policy of pensioning teachers in Austria proper—that is, the German portion of the Austrian Empire—is as old as it is in Germany, Austria having been a part and parcel of Germany and of the German Confederation until 1866.

In the other part of the Austrian Empire, in Hungary, the pension scheme dates from 1875. During the first three years the Government gave a subsidy of \$25,000 annually, of \$50,000 each for the next three years, and after that a yearly donation of \$75,000. The teacher worn out at an early age finds relief, and 40 per cent of the husband's pension passes to the widow and children. Here there is a sort of surrender value given, but only on proof of inability to continue in the service. It is small in amount and limited to the first ten years of service. After that time provision for superannuation comes into play.

Sweden,<sup>1</sup> Norway,<sup>2</sup> and Denmark,<sup>3</sup> and also most of the cantons of Switzerland have recognized the advisability of removing worn-out teachers. In Russia<sup>4</sup> the teachers in town schools also may look forward to a pension. It seems to be the general policy in Russia, as well as in the western countries, to secure a long tenure of office to the teachers whom the state has prepared for their profession. In Germany it is claimed that the teacher being an officer of the state must owe his professional preparation to the state, and the prospect of being pensioned will prevent him from deserting the profession, for contributions to the pension fund are never returned in case the teacher leaves the profession.

<sup>4</sup> See Ann. Rep. of 1890-91, Vol. I, p. 216.

Holland has had a state scheme of pensioning teachers since the year 1878, and teachers can claim retirement with a pension if incapacitated after ten years of service, or for old age at 65. The pension is calculated at the rate of one-sixtieth of the last year's salary for eight years of service up to a maximum of two-thirds of the salary. To provide a fund for this purpose the teachers contribute 2 per cent of their salaries and the state provides the remainder. Two per cent paid from the twentieth to the sixty-fifth year of age will purchase an annuity equal to 38 per cent of the salary on which the deduction has been made. Every pension received before reaching the age of 65 must be paid entirely by the state, as well as a large portion of all pensions paid at the age of 65. There is no repayment, and voluntary efforts on the part of the teachers have secured annuities for widows and orphans.

In Belgium the fund is formed in this way: Two-fifths is paid by the community, two-fifths by the state, one-fifth by the province, and nothing by the teacher. The pension may reach \$1,000 per annum. The amount of annuity is calculated at the rate of one fifty-fifth of the average of last five years' salary for every year of service, together with this peculiar addition: The possession of certain certificates, i. e., for drawing, music, etc., counts for further years of service to a maximum of four. Teachers may retire after five years of service if incapacitated through school work, but if not so disabled the superannuation begins at the age of 50 with thirty years of service; or at the age of 60 with only fifteen years' service. The teachers contribute nothing to the pension fund, and naturally they have no claim on it for repayments of any sort; but the moment they commence to receive salary from either of the contributing bodies mentioned above they are compelled to submit to a deduction of about 4 per cent of their salaries to provide a fund for the widows and orphans. The widow of a teacher who had seen thirty years' service would receive from this fund an annuity equal to 36 per cent of the husband's average salary. A smaller amount is paid for each minor child.

In France the teachers are on the same footing as other servants of the state; the salaries are paid subject to a deduction of 5 per cent, plus one-twelfth of the first year's salary, plus one-twelfth of each increase of salary for the first year of such increase. This second form of deduction is productive of great evil. A teacher does not receive any salary until the end of the second month after his appointment, and it is said that they are frequently compelled during that time to contract debts with all their consequent worry and degradation. As a rule, the pension is payable after thirty years' service, the other factor being incapacity or 60 years of age. The amount of pension depends on years of service—one-sixtieth of the average of the last six years for every year served. There is some provision for meeting the case of those who break down while employed, but it is small in amount and surrounded by a multitude of conditions. The widow of a teacher may receive one-third of the pension to which her husband would be entitled.

In Italy teachers have but recently enjoyed the advantages of pensions, payments from the fund beginning in the year 1889. For ten years prior to this contributions were being made in order to form a capital sum from which to commence payments. The communities, provinces, and the state each paid to the central fund 5 per cent on the minimum salary of the various grades of teachers, and during the same period the teachers paid either 3 per cent or 2 per cent, according to the age of the contributor. In addition to this the state appropriated a subsidy of \$60,000 per annum during these ten years. The contributions have now reached their normal scale of 2 per cent on the minimum salary, such amounts being paid by each of the contributing bodies mentioned above, or 8 per cent in all. The pensions are, as a rule, payable when the teacher reaches the age of 60 with forty years' service, or 65 with thirty-five years' service; the amount of the annuity should be noted, for it is equal to the average salary of the last five years. Cases of difficulty are here also recognized. It is seen that something must be done to meet the requirements of those who break down before reaching the pension age of 60, and therefore a reduced scale of superannuation is applied to those who have seen twenty-five years' service. With less than twenty-five years' service the teacher has no claim, nor does any provision appear to exist for repayment of contributions at death, or for any annuity for the family of the deceased.

In Greece teachers contribute 5 per cent on the salaries, and the state finds the remainder in order to superannuate teachers after twenty-one years' service, regardless of age.

In Portugal provisions are made for pensioning those engaged in education, but the details are not available, except this one fact, that no arrangements are made for meeting the requirements of the deceased teachers' families.

From the foregoing exposé it is seen that there is no uniform scheme of pensioning, but they all seem to follow leading principles, namely, that thirty-five to forty years is the average maximum of teachers' service, and 60 to 65 years the maximum of age. The amount of pension varies from one-third to the whole of the teachers' average salary. Generally it is found that where a pension scheme is maintained that there also pensions are paid to the widows and orphans.

This Bureau is indebted to the State Department for a statement on Government pensions for public teachers in Belgium, sent by Hon. George W. Roosevelt, United States consul at Brussels. The document is here subjoined, because it offers an insight into the minutiae of the pension laws in force in that country:

*Government pensions for public school teachers in Belgium.*—In 1842 there was established in this Kingdom a fund destined to pay pensions to retired or disabled public school teachers.

The fund was supported by reserving a certain percentage of the yearly salary of each employee of the public schools. On May 16, 1872, there was a law passed suppressing this fund, and making the Government responsible for such pensions; that

is, the State was taxed two-fifths, the province one-fifth, and the commune two-fifths of the amount necessary for the appropriation without permitting contribution from the parties interested. Those entitled to enjoy the benefit of this law are teachers who have served thirty years, and who are 50 years of age. Ten years' service and incurable disease preventing the teacher from ever resuming his functions, or five years' service and incurable infirmity received in the discharge of his duty, or 60 years of age, with fifteen years' service, entitle to the pension. Professors of secondary Government schools enjoy the same rates of pension, except in cases of infirmity, when the beneficiary must have arrived at the age of 55 years. The pension is calculated by years of service at the rate of one fifty-fifth per cent of the average salary during the last five years of active work. Teachers and professors connected with the high schools are retired and pensioned when permanently incapacitated on account of infirmities coming from acceptably performing their duty, or when they have attained the age of 70 years.

Professors and other members of the teachers' corps of the Government universities or special schools annexed thereto, normal, grammar, and scientific schools, veterinary and agricultural schools, as well as civil professors and other members of the civil corps connected with the Government military schools, are entitled to pension, as well as Government inspectors of State universities, directors and inspectors of classes in special schools annexed to Government universities, directors of normal, grammar, and scientific, veterinary, and agricultural schools. When these functionaries have reached the age limit they may, if they desire, be authorized to continue their labors or certain courses as they may elect. The authorization to continue duty is at all times revocable.

*When they may ask to be retired.*—When they have had thirty years' academic service, irrespective of age; when they have reached the age of 70 years and have had ten years' academic service; after twenty years' academic service if suffering from permanent and serious infirmity.

The retired pension is estimated by the amount of salary and extra pay received during the last five years of active service.

Professors and other members of the teachers' corps who on account of infirmities are prevented from continuing their functions, but not having reached the age limit or number of years of service requisite to demand pension, may be pensioned irrespective of age, after five years' service. The pension for such applicants, likewise for professors and others who have reached the age of 70 years, but are not entitled to be retired, is estimated and rated at one-sixth of the salary and extra pay received during the last five years of service.

Each year of academic service above five years is rated at  $\frac{1}{3}$  per cent over and above the salary.

No pension can exceed the average or mean salary which serves as a basis of estimation.

*Widows and orphans' pension fund.*—There is established in the department of public instruction, under the immediate supervision of the minister of the interior, a pension fund for the benefit of widows and orphans of professors, teachers, and employees connected with all public institutions of learning in Belgium.

The fund is maintained by a yearly assessment on the salary of each person connected with the Government or public schools. The fund is administered by a council composed of seven members, as follows: A secretary-general, or director-general, acting as president and appointed from the department of public instruction, one member selected from among the academy professors, two members from the intermediate schools, one from the primary schools, and two chosen indiscriminately from among the contributors. The members of the council are appointed by royal decree for the term of six years. The commissions are, however, always revocable.

All the rules formulated by the council are subjected to the approval of the minister of public instruction. All salaries, or extra salaries, incidental or extra pay of

professors, teachers, supernumeraries, and substitutes connected with Government or public schools are assessed as follows for the benefit of the fund:

Salary of 3,000 francs (\$579) or more, 3 per cent; salary of less than 3,000 francs,  $2\frac{1}{2}$  per cent. Teachers who have not contributed to the fund, and whose compensation amounts to 1,200 francs (\$231.60) per year, are taxed one month's pay, or if less than this amount, fourteen days' pay.

In the event of increase of salary, extra salary, incidental or extra pay, the first two months of such compensation is deducted for the benefit of the fund, as well as all sums derived from leave of absence, absence, or disciplinary punishment.

When functionaries of the schools are already married or marry subsequently, and desire to participate in the fund, they must submit to a yearly assessment of  $1\frac{1}{4}$  per cent on their salary, extra salary, incidental or extra pay, during ten years, commencing from the first day of the month following his marriage, or from entry upon duty if married. After the expiration of the ten years the functionary continues to pay a permanent tax of 1 per cent; also an additional tax of 1 per cent for each year's service prior to marriage. The last sum is calculated on all compensations which the functionary may have received before his marriage, or, according to the ease, from his assumption of duty. If, however, a written declaration is made of the intended marriage, or expected appointment three months prior to either event, a smaller percentage is deducted.

In case of death or divorce of the wife, the amount of 1 per cent following the ten years ceases after the first of the month following the death or divorce. In case of death of a contributor, leaving a widow entitled to pension, the amount deducted from the salary of the contributor is estimated by the  $1\frac{1}{4}$  per cent paid during ten years, as well as the 1 per cent following. If the total exceeds, or falls short of, the amount of one year's pension for the widow the difference is deducted or added. If, however, the contributor has not fulfilled his obligations to the fund, 10 per cent is deducted from the widow's pension until such obligations have been paid in full.

To a great extent the amount received by a widow is estimated by the difference in age existing between her and her late husband. For instance, if there is a difference of from twenty to twenty-five years, a deduction of 1 per cent is made, from twenty-five to thirty years  $1\frac{1}{2}$  per cent, from thirty to thirty-five years 2 per cent. Contributors cease to pay into the fund at date of death or divorce of wife, unless there are minor children under 18 years of age.

Functionaries actually in service who may anticipate marriage, or for those desiring to contribute who may be thirty-five years older than the wife, neither the widow of such contributor nor children issue of said marriage are entitled to pension.

During marriage, or after dissolution of same, and until the children have reached the age of 18 years, a deduction is made on the retired pension of contributors as follows: two per cent if the pension is or exceeds 2,000 francs (\$386),  $1\frac{1}{2}$  if the pension is from 1,000 (\$193) to 2,000 francs (\$386).

Contributors who may resign, be dismissed or suspended from their functions, and who desire to reserve the right to pension for wives and children, must within six months following the severance from duty, promise to pay quarterly in advance to the fund a sum equivalent to the amount assessed on their last salary.

*Right to pension.*—No widow is entitled to pension unless the functionary has contributed during five years to a fund established by the Government for widows, nor if the marriage was less than three years, unless there are children issue of said marriage.

If a woman marries a functionary who may have resigned or been dismissed, and if there are children issue of such marriage, neither mother nor children are entitled to pension. Children of contributors, whether by first or second marriage, are entitled to pension as orphans until they are 18 years old, where there is no widow admissible to pension, and where the contributor has subscribed to the fund during five years.

When the wife of a functionary dies after having contributed to the fund for five

years or less, and at her death leaves minor children, they are entitled to pension from the mother's contributions even though the father still lives. If the husband is also a contributor the children are, at his death, entitled to pension by reason of the amount paid into the fund by him, notwithstanding the fact that they receive a pension from the mother's contribution. Only legitimate or legitimized children are entitled to pension. Widows and orphans of functionaries deceased through accident or infirmities incurred in the discharge of their duty, independent of length of service, are entitled to pension.

*Basis of pension.*—The average pension is fixed at 16 per cent of the average salary. It is increased 1 per cent of the salary for contributions for each year after ten years. This increase, however, is not permitted to exceed 100 francs (\$19.30) per year.

A divorced woman or widow who remarries forfeits all right to pension. When a widow is no longer entitled to pension the children enjoy the rights to same, exactly as if they were orphaned of both mother and father.

Application for pension is addressed to the minister of public instruction and must contain the address of either the widowed applicant, the guardian of the orphans or minor children.

The widow without minor children incloses copies of certificates of her birth and birth of deceased husband, certificate of marriage, as well as certificate of death of husband, and a legalized certificate from the communal authorities testifying that the marriage was not dissolved by divorce. A widow having children under 18 years of age incloses in her application, besides the certificates above mentioned, certificates of birth of children and certificates showing that the children are still living.

A guardian for the orphans incloses in his application similar certificates. The length of time permitted wherein to file application for pension is three years from date of death. Payments are made quarterly and commence from the first day of the month following date of death.

The widow upon drawing pension must produce the following papers: Certificate of life; certificate showing that she has not remarried. If she has children under 18 years of age, a certificate stating that each child is alive.

Donations and legacies made to the fund are accepted by the minister of public instruction, under the rules prescribed for acceptance of donations and legacies to public institutions.

GEO. W. ROOSEVELT,  
*United States Consul.*

UNITED STATES CONSULATE,  
*Brussels, November 12, 1895.*

The daily press of the United States has taken up the question of "paying pensions to civil officers," and discusses it with all fairness, but rarely adds any new facts or arguments either in support or opposition to pensions. The Newark (N. J.) Evening News, however, published (May 20, 1896) an article prepared by one of the most competent insurance experts, who is likewise thoroughly informed on the various phases of public education. The article refers to the law in New Jersey and is here reproduced on account of the well-arranged mathematical calculations it contains. The author claims that the fund created by the retention of 1 per cent of the teachers' salaries is insufficient to meet the demands which will inevitably be made upon it in future. A much higher percentage of contributions, he thinks, is necessary if it is to meet its promises; and he argues that State aid will have to be invoked, or large outside contributions be received, to make the pension fund a success. The editor discusses the article at length. Since

his comments seem to reflect public opinion, they are here inserted also at the close of the article:

In view of the fact that during the next two or three weeks the public-school teachers of Newark must decide whether or not they will avail themselves of the recent State law providing for a retirement fund, it may be of some value to consider the plan of this law in a practical way and see if it can accomplish all that is claimed for it.

In the first place, there can be no reference to any other experience in which the conditions sufficiently resemble the present ones to form a precedent. Two or three States have passed teachers' pension laws, but so recently that as yet no data from that source are available. In Europe the retirement of teachers under pensions has been going on for many years—in one country for eighty years, at least. But there the State provides all, or almost all, of the fund. The societies merely supplement the work done by the Government.

In all of the following European States provision is made from the State funds for pensions for teachers: England, Scotland, France, Prussia, Saxony, Bavaria, Austria-Hungary, Spain, Portugal, Italy, Greece, Holland, Belgium, Denmark, Norway, Sweden, Finland. In New Jersey, however, there is no assurance of help from the State, and we must look at the plan of the fund itself to see how much it will do for those who put their trust in it.

The general plan of the "teachers' retirement fund" is this: Teachers desiring to receive the benefits under the law shall subscribe 1 per cent of their salaries monthly as long as they remain in the school service. Subscribers who have taught twenty years may, upon being judged incapacitated for teaching, with or without their own request, be retired upon an annuity of half their average annual salary for the last five years of teaching. This annuity, however, must not exceed \$600 nor be less than \$250, and teachers of twenty years' standing retiring under this plan within five years of the establishment of the fund must pay 20 per cent of their annual salary upon retiring. Teachers resigning after being subscribers five years or more may withdraw one-half of all they have paid in. Provision is also made for the possible emergency of there being no money on hand to pay the annuities as they fall due. They are to be paid in their order, as soon as there is a sufficient amount on hand, together with 5 per cent interest from the date when due.

It is the object of this article to estimate the progress of this fund for the next twenty years, and Newark as the largest city in the State will serve as a good illustration, especially as there are at hand as data the reports of the city board of education since 1856.

One's first impression from a cursory reading of the law is that the whole scheme is absurd. One per cent of a salary for twenty, thirty, or forty years surely can not pay for 50 per cent of a larger salary for life after age 40, 50, or 60. The average salary of Newark teachers, of both sexes, at the end of 1895, was a little less than \$791. The average salary of those who have taught twenty years is more than \$900. One per cent of \$791, for, say, thirty years, amounts, with compound interest at 5 per cent, to \$552, while, supposing the age of the teacher at appointment to have been 20, the value of an annuity of \$450 at age 50, using the same rate of interest, is \$5,547. Even if we suppose the teacher to have been active for forty years, 1 per cent of salary on the same basis would amount to \$1,003, as against \$1,381, the value of the annuity.

In the foregoing illustrations, however, there has not been taken into account the money left in the treasury, because of the many who resign or die before earning an annuity, and who take with them from the fund either nothing at all or one-half of what they have paid in. In the table given below an attempt has been made to illustrate the working of the scheme for the next twenty years in Newark, introducing all the elements of income and outgo. If any exaggeration has been indulged in, it has been in favor of the scheme rather than against it.

| 1             | 2               | 3         | 4                       | 5                         | 6                     | 7                           | 8                             |
|---------------|-----------------|-----------|-------------------------|---------------------------|-----------------------|-----------------------------|-------------------------------|
| During years— | No. of members. | Salaries. | 1 per cent of salaries. | Paid by retiring members. | Total paid into fund. | No. eligible for annuities. | No. retiring under annuities. |
| 1896-1897     | 523             | \$413,500 | \$4,135                 | \$900                     | \$5,035               | 106                         | 5                             |
| 1897-1898     | 540             | 426,500   | 4,265                   | 900                       | 10,200                | 104                         | 5                             |

| 1915-1916..... | 25                                      | 656                             | 21,600                                 | 266,505                               |

It has been assumed in the table that all the teachers would join in the enterprise. If any do not join, they will naturally be the ones who would have to pay longest, and whose need of the annuity seems most remote, and not those who may expect to become incapacitated soonest.

Columns 2 and 3 represent the probable number of teachers and their salaries on the basis of the increase since 1886. Column 4 is the annual cost to the members, 1 per cent of their salaries. Column 5 represents 29 per cent of the annual salaries of those adjudged incapacitated during the first five years. Column 6 shows the total amount paid into the fund from the beginning.

Column 7 represents the number having taught twenty years or more and eligible for annuities, calculated from the reports of the city superintendent. They are 20 per cent of the entire number employed, less those who have commenced to draw annuities. Column 8 is an estimate of the number who would commence to draw annuities each year. It is supposed that one-twentieth, or 5 per cent, of those eligible for annuities would become incapacitated.

Columns 9 show the amounts drawn by annuitants, on the supposition that their average annual salaries during their last five years of teaching were \$900, and that one annuitant in each group dies every other year. Column 10 is the estimated number that would resign after teaching from five to nineteen years. Column 11 shows the amounts drawn out by those represented in column 10. It is supposed that the first group going out have paid into the fund for five years, the second group six years, and the rest seven years. The number of years is under rather than over estimated. Column 12 shows the amount paid out of the fund each year, and 13 the total amount paid out from the beginning.

A comparison of columns 6 and 13 shows that after the second year the disbursements exceed the receipts, and that before the end of the fifth year the fund is exhausted. After ten years the total receipts are almost \$35,000 less than the total disbursements, and are falling behind at the rate of \$7,000 per year. In twenty years the liabilities are \$144,000 greater than the assets, taking no account of interest on unpaid annuities, and the debt is growing larger at the rate of \$13,500 yearly.

In order to meet all obligations, it would be necessary to get from outside sources an annual sum of money gradually increasing and averaging \$7,000 a year for the twenty years. As the law applies to the whole State, it seems not improbable that there would soon develop an average annual deficit of at least \$20,000. It is said that fairs are to be held throughout the State and donations solicited in order to meet any deficiencies. It is, to say the least, extremely doubtful whether these large amounts can be raised annually in such uncertain ways.

It should be remembered that in this investigation all estimates are purposely made very favorable to the plan of the fund. For example, in the table it appears that 15 teachers will commence to draw annuities during the first three years, while the probabilities are that at least 30 would do so. As a matter of fact, \$40,000 a year, rather than \$26,000, would represent the annual deficit throughout the State if the only source of income were the 1 per cent of the teachers' salaries.

Surely the plan can not commend itself as being founded on sound business principles. More than half the income needed to meet obligations is provided for only by hopes. Possibly those who urged the passage of the bill before the legislature expect the State to go farther in the future, and make an annual appropriation as a pension fund. However this may be, the teachers of the State who go into the scheme should realize that they have no guarantee whatever that their annuities will be paid when due, or even that they can draw out half of their contributions if they resign after five years.

If the law provided that Newark and Jersey City and perhaps two or three others of the larger cities could have separate organizations, sufficient local pride and enthusiasm might be aroused to secure to the fund large amounts through donations and entertainments, but it will be hard to stir up so much interest when it is known that all extra money raised will go into the general State fund.

There is a flourishing Teachers' Annuity and Aid Association in Philadelphia. It was established December 20, 1890, and is therefore less than five and a half years old. It has 885 members enrolled, and although it did not commence to pay annuities until it was three years old, there are now seventy-two annuitants on its books. The fact that this association is strictly local has been one reason, no doubt, for the liberal donations it has received from the citizens of Philadelphia. But even with such large contributions from outside friends and with a State appropriation of \$20,000, the charge for membership is 2 per cent of all salaries up to and including \$1,000, and 1 per cent of higher salaries.

Nothing has been said in this article of the provision made by the law for the manner of deciding whether or not a teacher is incapacitated, although the method is open to criticism; neither has any substitute for the present plan been suggested. It might be said concerning the latter that at least 5 per cent of the teachers' salaries would be necessary to establish the fund on a sound financial basis.

Following are the comments of the editor of the Evening News, of Newark, N. J.:

#### THE TEACHERS' RETIREMENT LAW.

In another column of the News there appears an analysis of the probable income and expenditures of the proposed teachers' retirement fund as applied to this city. It is made up according to the figures and statistics by which an insurance or annuity company would calculate the results of attempting to do business on such a plan. It shows, what has been apparent from the start, that the fund raised under the law will not be self-sustaining; that it will be pitifully inadequate to meet the demands likely to be made upon it. In this city it must also be borne in mind that the conditions are more favorable than they would be in the State at large. The calculations give every advantage to the fund. There is no sentiment about the mathematics of insurance and annuities, but the formulæ and the methods which are employed in arriving at conclusions in regard to business of that kind have experience back of them, and reliance can be placed upon their results.

It is true that those who have been most active in securing legislation providing for this fund admit its inadequacy. They believe that by giving fairs and entertainments and enlisting the support of those who are interested in the public schools and the teachers large amounts of money can be raised. They hope for additional legislation and for State appropriations. The law was obviously intended as an

entering wedge for a system of pensioning of teachers. It was passed, however, after repeated attempts to secure the enactment of a teachers' pension law had failed, and one of the pleas made in its behalf by its advocates was that it would simply lend the aid of the State to an effort by the teachers to themselves provide for those among their number who might be forced to retire after years of faithful service. Is it likely that the State will come to the aid of the fund by making appropriations for pensions?

The question of the advantages to teachers and to the public offered by a teachers' pension fund it is needless to discuss. With here and there a rare and devoted exception, men and women who teach school follow that occupation because it is the best and most available means that they have to earn their livings. To pay higher salaries or to provide pensions would make positions in the public schools more desirable. The latter plan would enable educational authorities to retire superannuated teachers without feeling that the act was a cruel one, or would bring suffering to those who could no longer do their accustomed work.

To go that far, or, on the other hand, to say that teachers, like workers in other fields, ought to try by care and frugality to provide for their own old age, is to cover the grounds of the controversy over the question whether pensions should or should not be paid by the public to school teachers.

Apart from its failure to promise to be self-supporting, the scheme outlined by the law has two objections. One is that the law makes a teacher once a contributor always a contributor, as long as he or she remains in the public-school service. There is no way provided for those who have agreed to contribute to stop contributing, even though it should appear speedily that only those first retired had any prospect of getting annuities. The other point of unfairness is that in the event of a deficiency, the plan is not to divide the money proportionately among those entitled to receive it, but to pay the claims in full in order of priority, letting later applicants wait for their money. Both of these defects could be corrected by legislation; and teachers who think that they should be corrected, and who join in contributing to the fund, would do well to express their opinion. If those who start the movement unite in demanding changes obviously dictated by fairness and proper regard for others, the amendment of the law in those respects can no doubt be relied upon.

Teachers who believe that the State will aid this fund, or that private assistance will come in liberally, together with those who desire to assist their fellow-teachers, even if they do not themselves expect to derive any benefit, near or remote, will doubtless join the association. It may succeed in securing the help that will fairly put it on its feet and make it a strong reliance for teachers, an efficient ally of the public-school system, but those who join should do it with their eyes open to the crudity and insufficiency of the plan as it stands alone, and to the fact that it must be greatly supplemented if it is to succeed. It is fair to say that Miss Allen, the foremost champion of the law, dwelt with force upon this aspect of the case in the address which she delivered in this city last week.

## CHAPTER XXI.

### COEDUCATION—COMPULSORY ATTENDANCE—AMERICAN STUDENTS IN FOREIGN UNIVERSITIES—CONTINUATION AND INDUSTRIAL SCHOOLS.

---

#### COEDUCATION.

*United States.*—The report of the Commissioner for 1891-92 presented a detailed statement as to the policy of coeducation, or the education of the two sexes in the same class, as practiced in the schools and colleges of the United States. To sum up briefly the facts as there presented, it appears that in the elementary or public schools of the United States boys and girls are educated together. The only exceptions to this rule are found in a few cities,<sup>1</sup> less apparently than 6 per cent of the total number. Even in these cities separation seldom takes place below the high school.

In the few cases in which boys and girls are instructed separately in the lower grades the system has generally resulted from the original plan or location of the building, and is regarded as a necessary evil. San Francisco affords the only notable example of a system of city schools in which the separate instruction of boys and girls is maintained and advocated as the wisest course.

Considering private schools, it appears that coeducation is the policy in nearly two-thirds the number and that these enroll a little more than two-thirds of all the pupils in private schools.

As to higher institutions—i. e., colleges and universities—65 per cent of the number reporting to the bureau are coeducational. Every year sees some addition to the number so classified. The latest reporting the admission of women to their privileges are Furman University, Greenville, S. C., which adopted the policy in 1893, and Beloit College, Beloit, Wis., 1895.<sup>2</sup>

*Great Britain.*—Coeducation is practiced in a large proportion of the elementary schools of England and Wales and Scotland, but the statistics do not enable us to determine the proportion of pupils in mixed schools. In the schools and classes for infants—i. e., children under 7

---

<sup>1</sup> In the report for 1891-92, p. 788, it is stated that in the city of Denver, school district No. 1, boys and girls are educated in separate classes. This is an error arising from a mistake in the reply to the inquiry sent out from the office. Coeducation is the practice in all the Denver schools.

<sup>2</sup> Erskine College, Due West, S. C., announces that the trustees have authorized the admission of women, if they apply for the privilege.

years of age—there is no distinction of sex. As regards England, it appears that out of 22,848 departments for older pupils under separate head teachers 65 per cent are coeducational, and of the same for Scotland 97 per cent. The distribution between board and private schools was as follows in 1894-95:

## ENGLAND.

| Denominations.  | Number of departments in which separate head teachers are employed. |        |        |        |
|---|---|--------|--------|--------|
|   | Boys.   | Girls. | Mixed. | Total. |
| Schools connected with National Society, or Church of England.... | 1,908   | 1,723  | 9,442  | 13,073 |
| Wesleyan schools .....  | 34  | 28     | 468    | 530    |
| Roman Catholic schools .....                                      | 243   | 229    | 731    | 1,203  |
| British undenominational and other schools .....                  | 189   | 151    | 963    | 1,303  |
| School-board schools .....  | 1,778   | 1,706  | 3,255  | 6,739  |
| Total .....   | 4,152   | 3,837  | 14,859 | 22,848 |

## SCOTLAND.

|  |       |       |       |       |
|--|-------|-------|-------|-------|
| In public schools .....                            | 11    | 7     | 2,611 | 2,629 |
| In schools connected with Church of Scotland ..... | ..... | ..... | 44    | 44    |
| Free Church .....                                  | ..... | ..... | 14    | 14    |
| Episcopal Church .....                             | 4     | 2     | 68    | 74    |
| Roman Catholic Church .....                        | 26    | 24    | 142   | 192   |
| Undenominational and other schools .....           | 2     | 7     | 101   | 110   |
| Total .....  | 43    | 40    | 2,980 | 3,063 |

Statistics for Ireland show that 51 per cent of the national schools have a mixed attendance of boys and girls.

Secondary schools attended by both sexes generally have separate departments for each. It is noticeable that the royal commission on secondary education advocate the extension of the coeducation policy.<sup>1</sup> The university colleges established in England since 1868 are open to men and women. By the universities act of 1889 the Scotch universities were authorized to open their doors to women. Edinburgh admits them to the classes with men. Glasgow has affiliated Queen Margaret College for women, and more recently (1895) opened all lectures in the faculty of arts to women. The University College of Dundee, affiliated to St. Andrews, is coeducational.

In the British colonies, with very few exceptions, both mixed and separate schools are found. In Ontario all the schools are mixed; in Quebec the schools for English children are, as a rule, mixed, but in those for the French the sexes are separated. In the Australasian colonies the tendency to separate departments for boys and girls is noticeable in cities. In Cape Colony, while nearly all schools are mixed, separate schools for girls are encouraged.

*France.*—There is a slow but apparently steady increase in the number of mixed schools in France—that is, schools in which boys and girls are educated together. More significant still is the fact that this increase is taking place among private as well as among public schools. In the case of the public schools, the increase is confined to the secular schools,

<sup>1</sup> See p. 593.

but this is not the case with private schools. In the class of private secular schools, mixed schools have increased by 10.5 per cent, and in the class of parochial private schools, by 7.5 per cent since 1886-87. While the actual number of pupils in the mixed or coeducational public schools diminished in the decade 1886-87 to 1891-92, the relative proportion of the enrollment increased slightly—i. e., from 16.5 to 16.6 per cent. The enrollment in private coeducational schools has increased absolutely, but the ratio of enrollment in mixed private schools to the total private-school enrollment has declined slightly, i. e., by 0.4 per cent.

Custom and sentiment in France favor the separate education of boys and girls, and the law (1836, 1850, 1865, 1886) obliges every commune to maintain a separate school for girls unless authorized by the departmental council to substitute therefor a mixed school.

The number of communes having no special school for girls, either public or private, was a slightly smaller proportion of the total number of communes in 1891-92 than in 1886-87, the ratios being, respectively, 3.4 per cent and 3.7 per cent. Hence it would appear that the number of communes seeking to be relieved from the burden of a special school for girls does not increase, and that the increased enrollment in mixed schools is due to the rise of new communes having less than 500 inhabitants or to the growth of schools in which coeducation is a fixed policy. It is noticeable also that mixed schools are found chiefly in rural districts. Cities, as a rule, maintain separate schools for boys and girls; the entire department of the Seine, which is occupied by Paris and its environs, reported in 1891-92 for public schools only 0.2 per cent of the pupils enrolled in mixed schools, and for private schools 9.2 per cent.

In the department of secondary education, public and private establishments, separate education is the universal rule. As regards the universities, however, France has adopted a very liberal policy. The law has never prohibited the admission of women to the French faculties (universities), and since 1863 they have been practically open to women.

The number of women entering as matriculated students is necessarily small, since, apart from the absence of powerful incentives to severe effort, such as social honors, the certainty of lucrative careers, etc., it is difficult for women to secure the required preparation and its final sanction, the bachelor's degree or equivalent; nevertheless, a goodly number of women have successfully completed courses in the faculties of letters, of science, and of medicine, and received the degree of licencié, and, in a few instances, that of doctor.

Even the law faculty at Paris numbers women among its graduates. "From 1875-76 to 1887-88, inclusive, university degrees to the number of 262 were granted to women. These included 39 in medicine, 130 in the sciences, 89 in classics and belles-lettres, 1 in pharmacy, and 3 in

law. Of the whole number, 137 were obtained in Paris and the remainder in the provinces; 207 were conferred upon French women."

In the capacity of hearers or unmatriculated students a large number of women are found in attendance upon certain faculty courses at Paris and other academic centers.

*Germany.*—Separate education is the preferred policy in the German States, but coeducation is the rule in the primary schools of cities and in the country schools.<sup>1</sup> In Saxony, only the two lowest classes are mixed, so that separation occurs generally at the tenth year of age, always by the twelfth.

*Other continental countries.*—Similar conditions prevail in the remaining countries of Europe, the tendency toward separation being most strongly marked in the Catholic countries. In Italy, the law calls for separate schools for boys and girls, and if they attend at the same building, it must be in separate departments, each provided with its own entrance door. The lowest classes, however, may be, and often are, mixed.

In Norway, and to a less extent in Denmark, girls are securing admission to secondary schools formerly reserved for boys.<sup>2</sup>

The South American Republics follow the precedent of the Latin States of Europe. Brazil, like Italy, requires separate schools for the two sexes. In 1888 the experiment of admitting boys and girls to the same class rooms was made in a few schools, but they were seated in different rooms outside of recitation hours.

The admission of women to university privileges characterizes the recent history of higher education in Europe. The status of women in this respect in France and Great Britain has already been noted; additional countries in which women are admitted to the same university courses as men are Switzerland, Italy, Belgium, Holland, Denmark, Norway, Sweden. Except in Switzerland, comparatively few women avail themselves of these privileges. Recent movements looking to the extension of similar privileges in German universities, also in Austria, Hungary, and Greece, are treated in extenso in another chapter of this report.<sup>3</sup>

#### COMPULSORY SCHOOL ATTENDANCE.

The report of the Commissioner for 1888-89 presented a chapter on the compulsory attendance laws in the United States,<sup>4</sup> which was brought "as far as practicable" to March, 1891. At that time 27 States and Territories of the Union had compulsory attendance laws in operation. The important changes that have taken place in respect to this matter since that report was prepared are a new compulsory education law for New York, enacted May 12, 1894, and a compulsory law for Pennsylvania, the first in its history, bearing date May 16, 1895.

<sup>1</sup> See statement by Dr. E. Schlee in Report of Commissioner for 1891-92, vol. 2, p. 799.

<sup>2</sup> See address by P. Voss in Report of Commissioner for 1888-89, vol. 1, p. 464.

<sup>3</sup> See pp. 921-936.

<sup>4</sup> See vol. 1, pp. 470-531.

Comparison of the new law for New York with the previous law of 1894 shows the following important changes:

The age of required instruction, formerly 8 to 14, is extended two years (8 to 16). Under the former law the required annual term of school attendance was fourteen weeks, eight of which were to be consecutive. Under the present law, every child between 14 and 16 years of age, and "in proper physical and mental condition to attend school," and who is "not regularly and lawfully engaged in any useful employment or service," and every such child "between 8 and 12 years of age shall attend upon instruction as many days annually, during the period between the first days of October and the following June, as the public school of the district or city in which such child resides shall be in session during the same period."

Every such child between 12 and 14 years of age "shall attend upon instruction during such period at least eighty secular days of actual attendance, which shall be consecutive, except for holidays, vacations, and detentions by sickness, which holidays, vacations, and detentions shall not be counted as a part of such eighty days, and such child shall, in addition to the said eighty days, attend upon instruction when not regularly and lawfully engaged in useful employment or service." The penalties for violation of the law are increased. In place of a fine of \$1 for the first offense and for each succeeding offense, a fine of \$5 for each week not exceeding a total of thirteen weeks, the present law exacts a maximum fine of \$5 for the first offense, and for each subsequent offense a fine not exceeding \$50 or imprisonment not exceeding thirty days. The penalty for employing a child in violation of the law is the same as under the former law, but the employment of "any child between the ages of 8 and 12 years in any business or service whatever, during any part of the term during which the public schools of the district in which the child resides are in session," is strictly forbidden. Special officers are designated for the enforcement of the law and special schools provided for "the confinement, maintenance, and instruction of truant children." Moreover, the State superintendent may withhold from any city or district which, in his judgment, "willfully omits and refuses to enforce the provisions of this act," one-half of all public school money. Thus the law starting with parental obligations recognizes in the end that the welfare of the child is a common responsibility.

The indifference in the matter or absolute opposition to compulsory legislation which formerly prevailed among us is evidently passing away. On this point the Commissioner's report already quoted says:

The principle of compulsory education is steadily gaining ground. Steps in advance are being taken here and there all along the line. Since 1886 no less than 16 (now 17) States and Territories have either enacted laws for the first time or have made their former laws more stringent. The arguments and discussions of thirty years or more have been gradually silencing opposition, and public sentiment is slowly crystallizing in the direction of requiring by law all parents to provide a certain minimum of school instruction for their children. This tendency is unmistakable.

The most convincing proof of the correctness of this opinion is found in the recent legislation in Pennsylvania. The law of May 16, 1895, requires that—

Every parent, guardian, or other person in this Commonwealth having control or charge of a child or children between the ages of 8 and 13 years shall send such child or children to a school in which the common English branches are taught, and that such child or children shall attend such school during at least sixteen weeks of each year in which schools in their respective districts shall be in session, unless excused from such attendance by the board of the school district in which the parent, guardian, or other person resides, upon the presentation to said board of satisfactory evidence showing such child or children are prevented from attendance at school, or application to study, by mental or physical or other urgent reasons: *Provided*, That in case there be no public school in session within two miles of the nearest traveled road of any person within the school district, he or she shall not be liable to the provisions of this act: *Provided*, That this act shall not apply to any child that has been or is being otherwise instructed in the common English branches of learning for a like period of time: *And provided further*, That the certificate of any principal of any school or educational institution, or of any teacher, that any child has been or is being so instructed, issued to such child or its parents or guardians shall be sufficient and satisfactory evidence thereof.

For every neglect of duty imposed by the foregoing section of this act, "the person in parental relation offending shall be guilty of a misdemeanor, and shall, upon conviction thereof before a justice of the peace or alderman, forfeit a fine not exceeding \$2 on the first conviction, and a fine not exceeding \$5 for each subsequent conviction." The defendant has, however, privilege of appeal to the courts. The act authorizes boards of school directors or school controllers in cities, boroughs, or townships to employ attendance officers, "whose duty it shall be to look after, apprehend, and place in such schools as the person in parental relation may designate, truants and others who fail to attend school in accordance with the provisions of this act."

Provision is made for an annual census of the children of school age (8 to 13 years), and teachers are required to—

report immediately to the secretary of the board of directors or controllers, and thereafter, at the close of each school month, the names of all children on the list previously furnished by the secretary, who were absent without satisfactory cause for five days during the month for which the report shall be made, when, if it shall appear that any parent, guardian, or other person having control of any child or children shall have failed to comply with the provisions of this act, after due notification in writing, as provided in section 2, the secretary, or attendance officer, if there be one, in the name of the school district, shall proceed against the offending party or parties in accordance with law by complaint before any alderman or justice of the peace.

Moreover, the secretary, or attendance officer, if there be one, of any board of directors or controllers, who fails to comply with the provisions of the act, is to be judged "guilty of a misdemeanor, and upon conviction thereof before an alderman or justice of the peace shall forfeit a fine not exceeding \$25."

In his report for 1895, the State superintendent, Hon. Nathan C. Schaeffer, says, with reference to this measure:

But the most far-reaching of all the recent laws is the act making education compulsory. Under this act children between the ages of 8 and 13 are required to attend

school at least sixteen weeks each year. The moral effect of this legislation has been salutary in causing some pupils to attend who would otherwise have absented themselves. The full effect of the law can not be seen so long as the school census has not been taken. In accordance with the opinion of the attorney-general this census is first to be taken in connection with the spring assessment of 1896.

The following table gives the salient particulars of the compulsory laws in twenty-eight States and Territories of the Union, together with the date of the law now in force, and in a few cases the date of subsequent amendments. To this is appended a tabular statement of the conditions of compulsory school attendance in foreign countries, as given in the report of the royal commission appointed to inquire into the working of the elementary education acts, England and Wales, 1888, Foreign Returns.

*Compulsory education requirements in the United States.*

| States.                 | Date of present law. | Ages.    | Annual period.   | Penalty.  |
|-------------------------|----------------------|----------|--|---|
| Maine .....             | 1887                 | 8-15...  | 16 weeks.....  | Fine, \$25 (maximum).   |
| New Hampshire.....      | 1886                 | 6-16...  | 12 weeks.....  | Each offense, \$10 (maximum).   |
| Vermont.....            | 1888                 | 8-14...  | 20 weeks.....  | Fine, \$10 to \$50.   |
| Massachusetts.....      | { 1873<br>a 1889 }   | 8-14...  | { 2 terms; 10 consecutive weeks each.  | { Each offense, forfeit of \$20.  |
| Rhode Island.....       | 1887                 | 7-15...  | 12 weeks; 6 consecutive.   | Each offense, fine \$20 (maximum).  |
| Connecticut.....        | 1872                 | 8-16...  | 8-13 years of age, 24 weeks; 13-14, 12 weeks.  | For each week's neglect, fine, \$5 (maximum).   |
| New York.....           | 1894                 | 8-16...  | 8-12 years of age and unemployed youths, 14-16, full term; 12-14, 80 consecutive days. | First offense, fine, \$5 (maximum); each subsequent offense, \$50 (maximum), or imprisonment 30 days. |
| New Jersey.....         | 1885                 | 7-12...  | 20 weeks; 8 consecutive.   | Each offense, \$10 to \$25, or imprisonment 1 to 3 months.  |
| Pennsylvania.....       | 1895                 | 8-13...  | 16 weeks.....  | First offense, \$2 (maximum); each subsequent offense, \$5 (maximum).                                 |
| District of Columbia b. | 1864                 | 6-14...  | 12 weeks; 6 consecutive.   | Fine, \$20 (maximum).   |
| Ohio.....               | { 1889<br>a 1890 }   | 8-14...  | { 20 weeks, city districts; 16 weeks, village and township districts.                  | { Fine, \$5 to \$20.  |
| Illinois.....           | 1889                 | 7-14...  | 16 weeks; 8 consecutive.   | Fine, \$1 to \$20.  |
| Michigan.....           | { 1883<br>a 1885 }   | 8-14...  | 16 weeks; 6 consecutive.   | { First offense, \$5 to \$10; each subsequent offense, \$10 (minimum).                                |
| Wisconsin.....          | 1891                 | 7-14...  | 12 weeks.....  | Fine, \$3 to \$20.  |
| Minnesota.....          | 1885                 | 8-16...  | 12 weeks; 6 consecutive.   | First offense, \$10 to \$20; each subsequent offense, \$25 to \$50.                                   |
| Dakota c.....           | { 1883<br>a 1887 }   | 10-14... | do.....  | Fine, \$10 to \$25.   |
| Nebraska.....           | 1887                 | 8-14...  | 12 weeks.....  | Each offense, \$10 to \$50.   |
| Kansas.....             | 1874                 | 8-14...  | 12 weeks; 6 consecutive.   | First offense, fine, \$5 to \$10; each subsequent offense, \$10 to \$20.                              |
| Montana b.....          | 1883                 | 8-14...  | do.....  | Each offense, \$5 to \$20, or 30 days imprisonment.   |
| Wyoming.....            | 1887                 | 7-16...  | 12 weeks.....  | Each offense, \$25 (maximum).   |
| Colorado.....           | 1889                 | 8-14...  | 12 weeks; 8 consecutive.   | Each offense, \$5 to \$25.  |
| New Mexico.....         | 1891                 | 8-16...  | 12 weeks.....  | Fine, \$1 to \$25, or imprisonment for not more than 10 days.   |
| Utah.....               | 1890                 | 10-14... | 16 weeks; 10 consecutive.  | First offense, \$10 (maximum); each subsequent offense, \$30.   |
| Nevada.....             | 1873                 | 8-14...  | 16 weeks; 8 consecutive.   | First offense, \$50 to \$100; subsequent offense, \$100 to \$200.                                     |
| Idaho.....              | 1887                 | 8-14...  | 12 weeks; 8 consecutive.   | First offense, \$5 to \$20; subsequent offenses, \$10 to \$50.  |
| Washington.....         | 1890                 | 8-15...  | 12 weeks.....  | Fine, \$10 to \$25.   |
| Oregon.....             | 1889                 | 8-14...  | 12 weeks; 8 consecutive.   | First offense, \$5 to \$25; each subsequent offense, \$25 to \$50.                                    |
| California b.....       | 1874                 | 8-14...  | Two-thirds of school term; 12 weeks consecutive.                                       | Each offense, \$20 to \$50.   |

a Education compulsory since 1769.

b Compulsion not yet enforced.

## AMERICAN STUDENTS IN FOREIGN UNIVERSITIES.

Americans intending to pursue a course of higher education in Europe chiefly attend German and Swiss universities. Comparatively few attend French and English institutions of learning, but for art studies they naturally prefer the French schools to the German, while for technical branches the German and English schools are preferred. Admission to German universities being dependent upon a course of preparation in a German classical secondary school (so-called gymnasia), Americans are rarely matriculated as regular students, but as hearers who have all the privileges of regular students, except that they are barred from state examinations which open the way to the learned professions in Germany. The French authorities propose to draw the current of American students to France.<sup>1</sup> In Paris a committee of the Sorbonne are active in calling the attention of Americans to the advantages offered in France. They particularly dwell on the fact that admission to schools of learning in France for foreigners is facilitated. Lately a committee has been organized in Washington working to the same end. However, several journals in the United States advocate the continuance of the practice in vogue, urging that the German language is acquired more easily, hence that an American can more easily familiarize himself with the working of a German university, and, furthermore, that the German university is a complete institution, while a French provincial university is rarely composed of more than one or two faculties. The following figures may be of interest:

*American students in German universities.*

| Year.      | Theology. | Law. | Medicine. | Philosophy. | Total. |
|------------|-----------|------|-----------|-------------|--------|
| 1891 ..... | 47        | 13   | 133       | 253         | 446    |

Further information is found on page 340 of Annual Report for 1891-92.

## CONTINUATION AND INDUSTRIAL SCHOOLS.

In Germany, it is well understood that an elementary education, such as the common school offers, barely suffices to prepare for the duties of life the children of the poorer strata of society. The time between the fourteenth and, say, eighteenth years of life is a period during which the children are apt to forget what they learned in school, not having immediate application of their knowledge in daily pursuits. The various state and communal governments of Germany, Austria, Switzerland, and some other States in Europe having recognized the necessity of bridging over that period, established what is known as "continuation

<sup>1</sup> For detailed account of this movement see pp. 305 et seq.

of supplementary schools." These schools are either day, evening, or Sunday schools. In most cases they offer reviews of elementary branches, and in addition to these a number of generally useful branches of practical knowledge, such as drawing and manual labor. When they offer this manual instruction, which is also called instruction in trades sometimes, these schools are classed among the industrial schools. If they have no such addition, and confine themselves to the common school branches, they are called continuation schools only.

In industrial centers, such as Saxony, Thuringia, and Rhenish Prussia, as well as in large cities with extensive industries, these continuation schools are most generally industrial schools also, and are specially designed to give opportunities to apprentices in workshops and factories to prepare themselves better for their pursuits than they could otherwise, and the parental governments in central Europe are very much concerned about apprentices and the thorough preparation of skilled labor. They even prescribe for the boys a compulsory attendance in these evening or Sunday schools. The State law gives communities the right to insist upon a compulsory attendance where ample provision is made, and where the State gives a subsidy for the maintenance of such schools. It is the rule, generally accepted in all German-speaking nations, that the community establishes the school—that is to say, furnishes the house and equipments, light and fuel, as well as furniture and tools, and the State pays the salary of the teacher. Thus communities and government join hands in maintaining a vast system of supplementary schools chiefly designed to prevent the deterioration of the elementary common school work, and secondly to facilitate and aid industries in the city and in the country, for these schools are not industrial schools only but also agricultural, many of them being situated in agricultural districts.

Now, it must not be understood that any of the supplementary or continuation schools and industrial and agricultural schools, as they are called, are anything more than elementary. The real and actual trade schools are of a higher order. These latter schools presuppose a thorough common school education, and build upon that by introducing higher arithmetic, business methods, a great deal of industrial drawing, and the elements of certain trades. These trades are not chosen by the State authority, but they are invariably the choice of authorities of the community or of certain societies, the aim of which is to encourage trade and industry. Many of such schools are therefore established by trades union. Afterwards they were adopted, as it were, by the city or communal government, and as such came under the State law which provides for the State aid or subsidies.

Though these schools are primarily established and maintained for boys, it must be stated that during the last twenty years the fact that women are employed in various industries in factory and shop work makes it necessary to extend the benefits of continuation and indus-

trial schools to girls also. But the Germans recognize the fact that woman's skill lies in different directions from that of man's skill, and they therefore aim to meet the several necessities of woman's skill in school work by carefully discriminating between shopwork for boys and for girls. In the models used in drawing, for instance, it is plainly seen that a thoughtful discrimination is made. The same is done with reference to the work in arithmetic and in commercial branches.

In some portions of the Empire the continuation schools are very old, having begun shortly after the general revival following in the wake of the dethronement of Napoleon I. In other parts of the Empire, as well as in Austria and Switzerland, and notably in the agricultural districts, the continuation schools are of more recent origin. Their attendance is not at all uniformly regular, owing to the fact that attendance is not everywhere compulsory, and owing also to the fact that the skill and popularity of the teacher has much to do with the attendance at a school for boys and girls in the critical age between 14 and 18. It is well understood that this period is a time of storm and stress, and subjugation under strict rules and discipline in that age is more difficult with children of the lower strata of society than it is found in higher schools and colleges, where a higher culture and a more refined atmosphere aids the discipline and the general habitus of the students. In paragraph 3 of chapter on "Education in Central Europe," in this annual report, an extensive article on the subject of supplementary schools is found. It contains some statistics which show the extent of the system.

# CHAPTER XXII.

## EDUCATIONAL DIRECTORY.<sup>1</sup>

### I.—CHIEF STATE SCHOOL OFFICERS.

| Name.                    | Address.                  | Official designation.                       |
|--------------------------|---------------------------|---|
| John O. Turner.....      | Montgomery, Ala.....      | State superintendent of education.          |
| Sheldon Jackson.....     | Sitka, Alaska.....        | General agent of education.                 |
| F. J. Netherton.....     | Phoenix, Ariz.....        | Superintendent of public instruction.       |
| Junius Jordan.....       | Little Rock, Ark.....     | State superintendent of public instruction. |
| Samuel T. Black.....     | Sacramento, Cal.....      | Do.   |
| Mrs. A. J. Peavey.....   | Denver, Colo.....         | Do.   |
| C. D. Hine.....          | Hartford, Conn.....       | Secretary of State board of education.      |
| W. B. Powell.....        | Dover, Del.....           | Do.   |
| W. N. Sheats.....        | Washington, D. C.....     | Superintendent of District schools.         |
| Gustavus R. Glenn.....   | Tallahassee, Fla.....     | State superintendent of public instruction. |
| C. A. Forseman.....      | Atlanta, Ga.....          | State school commissioner.                  |
| Samuel M. Inglis.....    | Boise, Idaho.....         | State superintendent of public instruction. |
| D. M. Geeting.....       | Springfield, Ill.....     | Do.   |
| Henry Sabin.....         | Indianapolis, Ind.....    | Do.   |
| Edmund Stanley.....      | Des Moines, Iowa.....     | Do.   |
| W. J. Davidson.....      | Topeka, Kans.....         | Do.   |
| J. V. Calhoun.....       | Frankfort, Ky.....        | Do.   |
| W. W. Stetson.....       | Baton Rouge, La.....      | State superintendent of education.          |
| E. B. Prettyman.....     | Augusta, Me.....          | State superintendent of common schools.     |
| Frank A. Hill.....       | Baltimore, Md.....        | Secretary of State board of education.      |
| Henry R. Pattengill..... | Boston, Mass.....         | Do.   |
| W. W. Pendergast.....    | Lausing, Mich.....        | State superintendent of public instruction. |
| A. A. Kincannon.....     | St. Paul, Minn.....       | Do.   |
| John R. Kirk.....        | Jackson, Miss.....        | State superintendent of education.          |
| E. A. Steere.....        | Jefferson City, Mo.....   | State superintendent of public schools.     |
| H. R. Corbett.....       | Helena, Mont.....         | State superintendent of public instruction. |
| H. C. Cutting.....       | Lincoln, Nebr.....        | Do.   |
| Fred. Gowing.....        | Carson City, Nev.....     | Do.   |
| Chas. J. Baxter.....     | Concord, N. H.....        | Do.   |
| Amado Chaves.....        | Trenton, N. J.....        | Do.   |
| Charles E. Skinner.....  | Santa Fe, N. Mex.....     | Superintendent of public instruction.       |
| John C. Scarborough..... | Albany, N. Y.....         | State superintendent of public instruction. |
| Miss Emma F. Bates.....  | Raleigh, N. C.....        | Do.   |
| Oscar T. Corson.....     | Bismarck, N. Dak.....     | Do.   |
| E. D. Cameron.....       | Columbus, Ohio.....       | State commissioner of common schools.       |
| G. M. Irwin.....         | Guthrie, Okla.....        | Superintendent of public instruction.       |
| Nathan C. Schaeffer..... | Salem, Oreg.....          | State superintendent of public instruction. |
| Thomas B. Stockwell..... | Harrisburg, Pa.....       | Do.   |
| W. D. Mayfield.....      | Providence, R. I.....     | Commissioner of public schools.             |
| Frank Crane.....         | Columbia, S. C.....       | State superintendent of education.          |
| S. G. Gilbreath.....     | Pierre, S. Dak.....       | State superintendent of public instruction. |
| J. M. Carlisle.....      | Nashville, Tenn.....      | State superintendent of public schools.     |
| John R. Park.....        | Austin, Tex.....          | State superintendent of public instruction. |
| Mason S. Stone.....      | Salt Lake City, Utah..... | Do.   |
| John E. Massey.....      | Montpelier, Vt.....       | State superintendent of education.          |
| C. W. Bean.....          | Richmond, Va.....         | State superintendent of public instruction. |
| Virgil A. Lewis.....     | Olympia, Wash.....        | Do.   |
| J. Q. Emery.....         | Charleston, W. Va.....    | State superintendent of free schools.       |
| Miss Estelle Reel.....   | Madison, Wis.....         | State superintendent of public schools.     |
|                          | Cheyenne, Wyo.....        | State superintendent of public instruction. |

<sup>1</sup> Including all changes reported to the Bureau up to August, 1896.

### II.—LIST OF CITY SUPERINTENDENTS.

#### ALABAMA.

|                               |                              |
|-------------------------------|------------------------------|
| Anniston, H. C. Gunnels.      | Mobile, John D. Yerby.       |
| Bessemer, G. M. Lovejoy.      | Montgomery, C. L. Floyd.     |
| Birmingham, J. H. Phillips.   | New Decatur, R. R. Harris.   |
| Eufaula, F. L. McCoy.         | Opelika, T. C. Pinkard.      |
| Florence, H. C. Gilbert.      | Selma, R. E. Hardaway.       |
| Huntsville, Sydney J. Mayhew. | Tuscaloosa, James H. Foster. |

## ARIZONA.

Tucson, ————.

## ARKANSAS.

Fort Smith, J. L. Holloway.  
 Helena, W. W. Rivers.  
 Hot Springs, G. B. Cook.

Little Rock, J. R. Rightsell.  
 Pine Bluff, J. H. Hincmon.

## CALIFORNIA.

Alameda, D. J. Sullivan.  
 Berkeley, S. D. Waterman.  
 Eureka, G. W. Warren.  
 Fresno, T. L. Heaton.  
 Los Angeles, J. A. Forshay.  
 Napa City, J. L. Shearer.<sup>1</sup>  
 Oakland, J. W. McClymonds.  
 Pasadena, James D. Graham.  
 Pomona, F. A. Molyneux.  
 Riverside, Eugene Fuller.<sup>1</sup>  
 Sacramento, O. W. Erlewine.

San Bernardino, T. H. Kirk.  
 San Diego, Ellwood P. Cubberley.  
 San Francisco, Madison Babcock.  
 San Jose, F. P. Russell.  
 Santa Ana, F. E. Perham.  
 Santa Barbara, C. Y. Roop.  
 Santa Cruz, D. C. Clark.  
 Santa Rosa, Frederick L. Burk.  
 Stockton, James A. Barr.  
 Vallejo, Charles A. Fulton.

## COLORADO.

Aspen, F. H. Clark.  
 Colorado Springs, ————.  
 Cripple Creek, ————.  
 Denver: District No. 1, Aaron Gove.  
           District No. 2, L. C. Greenlee.

Denver: District No. 17, J. H. Van Sickle.  
 Leadville, J. P. Jackson.  
 Pueblo: District No. 1, James S. McClung.  
           District No. 20, H. E. Robbins.  
 Trinidad, Eugene C. Stevens.

## CONNECTICUT.

Ansonia, W. H. Angleton.  
 Branford, C. H. Harriman.<sup>1</sup>  
 Bridgeport, Charles W. Deane.  
 Bristol, James F. Williams.  
 Danbury, A. C. Hubbard.<sup>2</sup>  
 Derby, J. W. Peck.  
 East Hartford, Joseph O. Goodwin.<sup>3</sup>  
 Enfield, James B. Houston.<sup>3</sup>  
 Greenwich, George P. Fisher.  
 Hartford, Andrew F. Gates.  
 Manchester, Robert P. Bissell.  
 Meriden, J. T. Pettee.  
 Middletown, Walter B. Ferguson.  
 Milford, H. I. Matthewson.  
 Naugatuck, J. H. Carfrey.

New Britain, G. A. Stuart.  
 New Haven, Calvin N. Kendall.  
 New London, Charles B. Jennings.<sup>4</sup>  
 New Milford, Albert Evitts.  
 Norwalk, Charles Olmstead.<sup>2</sup>  
 Norwich, N. L. Bishop.  
 Rockville, I. M. Agard.  
 Stamford, Everett C. Willard.  
 Torrington, Edwin H. Forbes.  
 Wallingford, Daniel R. Knight.  
 Waterbury, M. S. Crosby.  
 West Haven, A. M. Drummond.  
 Westport, L. T. Day.<sup>2</sup>  
 Willimantic, George L. Storrs.  
 Winsted, George F. Prentiss.<sup>2</sup>

## DELAWARE.

Newcastle, George W. Andrew.

Wilmington, David W. Harlan.

## DISTRICT OF COLUMBIA.

Washington, William B. Powell, superintendent of public schools.

Washington, G. F. T. Cook, superintendent of colored schools.

 District No. 2, range 9, I. Harry Todd.<sup>1</sup>  
 Elgin, Eugene A. Mead.  
 Evanston: District No. 1, Homer H. Kingsley.  
 District No. 2, South Evanston, Fred. W. Nichols.  
 District No. 3, North Evanston, Arthur J. Snyder.  
 Freeport, R. S. Page.  
 Galena, I. C. Baker.  
 Galesburg, William L. Steele.  
 Jacksonville, David T. Harris.  
 Joliet, W. H. Campbell.  
 Kankakee, F. N. Tracy.  
 Kewanee, A. C. Butler.  
 LaSalle, L. A. Thomas.  
 Lincoln, A. L. Anderson.  
 Litchfield, J. E. Bryan.  
 Macomb, R. C. Rennick.  
 Mattoon, B. F. Armitage.

Metropolis City, Joel M. Bowlby.  
 Moline, H. M. Slauson.  
 Monmouth, James C. Burns.  
 Morris, John M. Boyer.  
 Oakpark, W. H. Hatch.  
 Ottawa, Samuel H. Heidler.  
 Pana: West Side and South Side, L. S. Ham.<sup>2</sup>  
 East Side, William Miner.  
 Paris, W. W. Black.  
 Pekin, K. S. Conklin.  
 Peoria, Newton Charles Dougherty.  
 Peru, W. W. Wirt.  
 Quincy, T. W. Macfall.  
 Rock Island, James E. Ament.  
 Rockford, P. R. Walker.  
 Springfield, J. H. Collins.  
 Spring Valley, F. S. Johnson.  
 Sterling: District No. 1, W. T. Tuttle.  
 District No. 3, H. L. Chaplin.  
 District No. 8, S. B. Hurst.  
 Streator, J. N. Patrick.  
 Urbana, J. W. Hays.  
 Wankegan, Frank H. Hall.

## INDIANA.

Anderson, John W. Carr.  
 Aurora, Sanford Bell.  
 Bloomington, W. H. Fertich.  
 Bluffton, W. P. Burris.  
 Brazil, John C. Gregg.  
 Columbus, J. A. Carnegie.  
 Connersville, W. F. L. Sanders.  
 Crawfordsville, Isaac M. Wellington.  
 Elkhart, D. W. Thomas.  
 Evansville, William A. Hester.  
 Fort Wayne, John S. Irwin.  
 Frankfort, Benjamin F. Moore.  
 Goshen, William H. Sims.  
 Greencastle, Robert A. Ogg.  
 Hammond, W. C. Belman.  
 Huntington, Robert I. Hamilton.  
 Indianapolis, David K. Goss.  
 Jeffersonville, P. P. Stultz.  
 Kokomo, Horace G. Woody.  
 Lafayette, Edward Ayres.  
 Laporte, James F. Knight.

Lawrenceburg, G. D. Knapp.  
 Lebanon, James R. Hart.  
 Logansport, Albert H. Douglass.  
 Madison, Thomas A. Mott.  
 Marion, Welford D. Weaver.  
 Michigan City, Edward Boyle.  
 Mount Vernon, Edwin S. Monroe.  
 Muncie, W. R. Snyder.  
 New Albany, W. H. Hershman.  
 Peru, ———.  
 Portland, C. L. Hotell.  
 Richmond, Justin N. Study.  
 Seymour, H. C. Montgomery.  
 Shelbyville, James H. Toulmin.  
 South Bend, Calvin Moon.  
 Terre Haute, William H. Wiley.  
 Valparaiso, Charles Henderson Wood.  
 Vincennes, Albert E. Humke.  
 Wabash, M. W. Harrison.  
 Warsaw, James H. Henry.  
 Washington, William F. Axtell.

## IOWA.

Atlantia, H. G. Lamsom.  
 Boone, George I. Miller.  
 Burlington, Charles Eldred Shelton.  
 Cedar Rapids, J. F. Merrill.  
 Centerville, F. E. Stephens.  
 Clinton, O. P. Bostwick.  
 Council Bluffs, Hugh W. Sawyer.  
 Creston, O. E. French.  
 Davenport, J. B. Young.  
 Des Moines: East Side, Amos Hiatt.  
 North Side, O. E. Smith.  
 West Side, Frank B. Cooper.  
 Dubuque, F. T. Oldt.  
 Fort Dodge, F. C. Wildes.

Fort Madison, C. H. Morrill.  
 Iowa City, W. F. Cramer.  
 Keokuk, O. W. Weyer.  
 Lemars, E. N. Coleman.  
 Lyons, J. H. Breese.  
 Marshalltown, F. E. Willard.  
 Mason City, A. R. Sale.  
 Mount Pleasant, John F. Riggs.  
 Muscatine, F. M. Witter.  
 Oskaloosa, Orion C. Scott.  
 Ottumwa, A. W. Stuart.  
 Sioux City, H. E. Kratz.  
 Waterloo: East Side, F. J. Sessions.  
 West Side, George A. Bateman.

## KANSAS.

Argentine, Charles R. Sortor.  
 Arkansas City, T. W. Conway.  
 Atchison, J. H. Glotfelter.  
 Emporia, John Dietrich.  
 Fort Scott, David M. Bowen.  
 Hutchinson, George W. Winans.  
 Junction City, George W. Kendrick.  
 Kansas City, Larkin L. Hanks.  
 Lawrence, Frank P. Smith.  
 Leavenworth, Miss Emma E. Dolphin, acting.

Newton, J. W. Cooper.  
 Ottawa, William M. Sinclair.  
 Parsons, S. D. Frazier.  
 Pittsburg, S. W. Black.  
 Salina, A. Ludlum.  
 Topeka, William M. Davidson.  
 Wellington, H. F. M. Bear.  
 Wichita, Frank R. Dyer.  
 Winfield, J. W. Spindler.

## KENTUCKY.

Ashland, John G. Crabbe.  
 Bowling Green, Edward Taylor.  
 Covington, John Morris.  
 Dayton, R. M. Mitchell.  
 Frankfort, McHenry Rhoads.  
 Henderson, Edward S. Clark.  
 Hopkinsville, Livingstone McCartney.  
 Lexington, William Rogers Clay.

Louisville, E. H. Mark.  
 Maysville, G. W. Blatterman.  
 Newport, John Burke.  
 Owensboro, James McGinniss.  
 Paducah, George O. McBroom.  
 Paris, E. W. Weaver.  
 Richmond, J. D. Clark.  
 Winchester, A. C. Fleshman.

<sup>1</sup> Principal.<sup>2</sup> Supervising principal.

## LOUISIANA.

Baton Rouge, Fred. J. Tunnard.<sup>1</sup>  
New Orleans, Warren Easton.

Shreveport, John L. Hargrove.

## MAINE.

Auburn, A. P. Wagg.  
Augusta, J. M. Wyman.  
Bangor, Miss Mary S. Snow.  
Bath, William H. Winslow.  
Belfast, Osman C. Evans.  
Biddeford, Royal E. Gould.  
Brewer, Mrs. Mertie M. Curtis.  
Brunswick, Franklin C. Robinson.  
Calais, S. E. Webber.  
Eastport, Charles Sumner Holton.

Ellsworth, H. A. Moore.  
Fort Fairfield, H. T. Powers.  
Gardiner, James M. Larrabee.<sup>2</sup>  
Lewiston, W. W. Stetson.  
Oldtown, Alfonso F. Marsh.<sup>2</sup>  
Portland, Orlando M. Lord.  
Rockland, Arthur P. Irving.  
Saco, John G. Locke.  
Sanford, Frank H. Dexter.  
Waterville, W. L. Waters.

## MARYLAND.

Annapolis, John G. Bannon.<sup>4</sup>  
Baltimore, Henry A. Wise.  
Cambridge, James L. Bryan.<sup>4</sup>

Cumberland, H. G. Weimer.<sup>4</sup>  
Frederick, Ephraim L. Boblitz.<sup>4</sup>  
Hagerstown, George C. Pearson.<sup>4</sup>

## MASSACHUSETTS.

Abington, W. H. Sanderson.  
Adams, ———.  
Amesbury, E. O. Perkins.<sup>5</sup>  
Amherst, William D. Parkinson.  
Andover, George E. Johnson.  
Arlington, W. H. Sanderson.  
Athol, Flora E. Kendall.  
Attleboro, J. O. Tiffany.  
Barnstable, Samuel W. Hallett.  
Beverly, Adelbert Leon Safford.  
Blackstone, Josiah B. Davis.  
Boston, Edwin P. Seaver.  
Braintree, Irving W. Horne.  
Bradford, R. D. McKeen.  
Bridgewater, W. H. Sanderson.  
Brockton, B. B. Russell.  
Brookline, Samuel T. Dutton.  
Cambridge, Francis Cogswell.  
Canton, James S. Perkins.  
Chelsea, Eben H. Davis.  
Chicopee, Clarence A. Brodeus.  
Clinton, Charles L. Hunt.  
Concord, William L. Eaton.  
Danvers, W. A. Baldwin.  
Dedham, Roderick Whittlesey Hine.  
Easton, Edward B. Maglathlin.  
East Hampton, B. C. Day.  
Everett, Randall J. Condon.  
Fall River, William C. Bates.  
Fitchburg, Joseph G. Edgerley.  
Framingham, Orville W. Collins.  
Franklin, Ernest D. Daniels.  
Gardner, Louis P. Nash.  
Gloucester, Freeman Putney.  
Grafton, Stanley H. Holmes.  
Greenfield, D. P. Dame.  
Haverhill, Albert L. Bartlett.  
Hingham, Elmer T. Curtiss.  
Holyoke, ———.  
Hopkinton, Alvan R. Lewis.  
Hydepark, Richard M. Johnson.<sup>5</sup>  
Lawrence, John E. Burke.  
Lowell, Arthur K. Whitcomb.  
Lynn, Orsamus B. Bruce.  
Malden, George E. Gay.
